Warm-Up

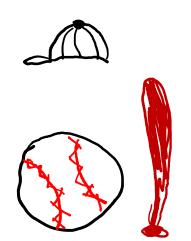

"Dr. Evil will attack you with laser sharks, unless you pay him one-million dollars."

How would you translate "unless" into logic?

We'll start of 1:32 with the worm-up!

- Remember to Soundown the activity poly

- Try this worn-up problem!

Warm-Up – Solution

"Dr. Evil will attack you with laser sharks, unless you pay him one-million dollars."

If you pay Dr. Evil his one-million dollars, are you safe from the laser sharks?

This is Dr. Evil! He hasn't promised you that's his full list of demands.

(If you do not pay Dr. Evil one-million dollars, then he will attack you with laser sharks.

Is the only promise you really have.

Warm-Up – Solution

"Dr. Evil will attack you with laser sharks, unless you pay him one-million dollars."

p: Dr. Evil will attack you with laser sharks

q: You pay him one-million dollars

The last slide would give us: $\sqrt{\neg q \rightarrow p}$

If Dr. Evil doesn't attack you with laser sharks, you must have paid him his million dollars, right? $\neg p \rightarrow q$ Are those both good translations?

Our First Proof and Digital Logic

CSE 311 Fall 2020 Lecture 3

Today

10 minutes of syllabus

Our first proof!

Contrapositives and digital logic.

Announcements

Homework 1 Problem 6 clarified (download a new version of the pdf).

Office Hours start this week.

Order of Operations

Just like you were taught PEMDAS

e.g. $3 + 2 \cdot 4 = 11$ not 24.

Logic also has order of operations.

Parentheses

Negation

And

Or, exclusive or

Implication

Biconditional

For this course: each of these is it's own level! e.g. "and"s have precedence over "or"s

Within a level, apply from left to right.

Other authors place And, Or at the same level – it's good practice to use parentheses even if not required.

Office Hours

A chance to talk to staff about the class.

Advice:

You don't have to have a question to come to office hours! (It can help, though) Aim as early in the week as possible.

We won't answer every kind of question in office hours:

We don't "pregrade" homework. We won't tell you whether something is right or wrong.

We will help on homework, but not usually by "giving hints." We'll usually ask questions about what you've tried, ask questions to help you decide what to do next, or point you to good examples to look at.

You're allowed to talk to others at office hours, as long as you're still following the collaboration policy.

Homework Submissions

Make sure we can read what you submit.

We can't spend 5 minutes per submission deciding if that's a p or a q.

Typesetting guarantees we can read it.

(Microsoft Word's equation editor is now halfway decent!

LaTeX is the industry standard for typesetting (if you go to CS grad school, you'll use it for all your papers). Overleaf is the easiest way to get started.

Need to know the code for a symbol? <u>Detexify!</u> Word uses LaTeX codes...mostly...

Last Time

We showed

DeMorgan's Laws:

$$\frac{\neg (p \lor q) \equiv \neg p \land \neg q \text{ and } \neg (p \land q) \equiv \neg p \lor \neg q}{\text{And the Law of Implication}}$$

$$\underbrace{p \to q} \equiv \neg p \lor q$$

We will always give you this list!

Properties of Logical Connectives

For every propositions p, q, r the following hold:

Identity

$$-p \wedge T \equiv p$$

$$- p \vee F \equiv p$$

Domination

$$- p \lor T \equiv T$$

$$-p \wedge F \equiv F$$

Idempotent

$$- p \lor p \equiv p$$

$$- p \wedge p \equiv p$$

Commutative

$$- p \lor q \equiv q \lor p$$

$$- p \wedge q \equiv q \wedge p$$

Associative

$$- (p \lor q) \lor r \equiv p \lor (q \lor r)$$

$$-(p \wedge q) \wedge r \equiv p \wedge (q \wedge r)$$

Distributive

$$- p \wedge (q \vee r) \equiv (p \wedge q) \vee (p \wedge r)$$

$$- p \lor (q \land r) \equiv (p \lor q) \land (p \lor r)$$

Absorption

$$- p \lor (p \land q) \equiv p$$

$$- p \land (p \lor q) \equiv p$$

Negation

$$- p \lor \neg p \equiv T$$

$$-p \land \neg p \equiv F$$

Using Our Rules

WOW that was a lot of rules.

Why do we need them? Simplification!

Let's go back to the "law of implication" example.

T T T T T T T T T T T T T T T T T T T	4	p	q	$p \rightarrow q$	
F F T		Т	T	-	
F F T			Ш	F	
F F T		F	T	T	4
		F	F	J	

When is the implication true? Just "or" each of the three true" lines!

Also seems pretty reasonable
So is $(p \land q) \lor (\neg p \land q) \lor (\neg p \land \neg q) \stackrel{?}{=} p \rightarrow q$ So is $(p \land q) \lor (\neg p \land q) \lor (\neg p \land \neg q) \equiv (\neg p) \lor q)$

i.e. are these both alternative representations of $p \rightarrow q$?

We could make another truth table (you should! It's a good exercise)

But we have another technique that is nicer.

Let's try that one

Then talk about why it's another good option.

We're going to give an iron-clad guarantee that:

How do we write a proof?

It's not always plug-and-chug...we'll be highlighting strategies throughout the quarter.

To start with:

Make sure we know what we want to show...

$$(p \land q) \lor (\neg p \land \neg q) \equiv$$

None of the rules look like this

Practice of Proof-Writing: **Big Picture**...WHY do we think this might be true?

The last two "pieces" came from the $\equiv (\neg p \lor q)$ vacuous proof lines...maybe the " $\neg p$ " came from there? Maybe that simplifies down to $\neg p$

Let's apply a rule

The law says:
$$p \wedge (q \vee r) \equiv (p \wedge q) \vee (p \wedge r)$$

$$\neg p \wedge (q \vee r) = (p \wedge q) \vee (p \wedge r)$$

 $(\neg p \land q) \lor (\neg p \land \neg q) \equiv \neg p \land (q \lor \neg q)$

$$\boxed{(p \land q) \lor (\neg p \land q)} \lor (\neg p \land \neg q) \equiv$$

None of the rules look like this

Practice of Proof-Writing: **Big Picture**...WHY do we think this might be true?

The last two "pieces" came from the $\equiv (\neg p \lor q)$ vacuous proof lines...maybe the " $\neg p$ " came from there? Maybe that simplifies down to $\neg p$

$$(p \land q) \lor (\neg p \land q) \lor (\neg p \land \neg q) \equiv (p \land q) \lor [(\neg p \land q) \lor (\neg p \land \neg q)]$$

Set ourselves an intermediate goal. Let's try to simplify those last two pieces

Associative law

Connect up the things we're working on.

$$\equiv (\neg p \lor q)$$

$$(p \land q) \lor (\neg p \land q) \lor (\neg p \land \neg q) \equiv (p \land q) \lor [(\neg p \land q) \lor (\neg p \land \neg q)]$$
$$\equiv (p \land q) \lor [\neg p \land (q \lor \neg q)]$$

Set ourselves an intermediate goal. Let's try to simplify those last two pieces

Distributive law

We think $\neg p$ is important, let's isolate it.

$$\equiv (\neg p \lor q)$$

$$(p \land q) \lor (\neg p \land q) \lor (\neg p \land \neg q) \equiv (p \land q) \lor [(\neg p \land q) \lor (\neg p \land \neg q)]$$

$$\equiv (p \land q) \lor [\neg p \land (q \lor \neg q)]$$
Set ourselves an intermediate goal
$$\equiv (p \land q) \lor [\neg p \land T]$$

Set ourselves an intermediate goal. Let's try to simplify those last two pieces

Negation

Should make things simpler.

$$\equiv (\neg p \lor q)$$

pieces

$$(p \land q) \lor (\neg p \land q) \lor (\neg p \land \neg q) \equiv (p \land q) \lor [(\neg p \land q) \lor (\neg p \land \neg q)]$$

$$\equiv (p \land q) \lor [\neg p \land (q \lor \neg q)]$$

$$\equiv (p \land q) \lor [\neg p \land (q \lor \neg q)]$$

$$\equiv (p \land q) \lor [\neg p \land T]$$

$$\equiv (p \land q) \lor [\neg p]$$

Identity

Should make things simpler.

$$\equiv (\neg p \lor q)$$

$$(p \land q) \lor (\neg p \land q) \lor (\neg p \land \neg q) \equiv (p \land q) \lor [(\neg p \land q) \lor (\neg p \land \neg q)]$$

$$\equiv (p \land q) \lor [\neg p \land (q \lor \neg q)]$$

$$\equiv (p \land q) \lor [\neg p \land (q \lor \neg q)]$$

$$\equiv (p \land q) \lor [\neg p \land T]$$

$$\equiv (p \land q) \lor [\neg p \land T]$$

$$\equiv (p \land q) \lor [\neg p]$$

$$\equiv (p \land q) \lor [\neg p \land T]$$

$$\equiv (p \land q) \lor [\neg p \land T]$$

$$\equiv (p \land q) \lor [\neg p \land T]$$

$$\equiv (p \land q) \lor [\neg p \land T]$$

$$\equiv (p \land q) \lor [\neg p \land T]$$

$$\equiv (p \land q) \lor [\neg p \land T]$$

$$\equiv (p \land q) \lor [\neg p \land T]$$

$$\equiv (p \land q) \lor [\neg p \land T]$$

$$\equiv (p \land q) \lor [\neg p \land T]$$

$$\equiv (p \land q) \lor [\neg p \land T]$$

$$\equiv (p \land q) \lor [\neg p \land T]$$

$$\equiv (p \land q) \lor [\neg p \land T]$$

$$\equiv (p \land q) \lor [\neg p \land T]$$

$$\equiv (p \land q) \lor [\neg p \land T]$$

$$\equiv (p \land q) \lor [\neg p \land T]$$

$$\equiv (p \land q) \lor [\neg p \land T]$$

$$\equiv (p \land q) \lor [\neg p \land T]$$

$$\equiv (p \land q) \lor [\neg p \land T]$$

$$\equiv (p \land q) \lor [\neg p \land T]$$

$$\equiv (p \land q) \lor [\neg p \land T]$$

$$\equiv (p \land q) \lor [\neg p \land T]$$

$$\equiv (p \land q) \lor [\neg p \land T]$$

$$\equiv (p \land q) \lor [\neg p \land T]$$

$$\equiv (p \land q) \lor [\neg p \land T]$$

$$\equiv (p \land q) \lor [\neg p \land T]$$

$$\equiv (p \land q) \lor [\neg p \land T]$$

$$\equiv (p \land q) \lor [\neg p \land T]$$

$$\equiv (p \land q) \lor [\neg p \land T]$$

$$\equiv (p \land q) \lor [\neg p \land T]$$

$$\equiv (p \land q) \lor [\neg p \land T]$$

$$\equiv (p \land q) \lor [\neg p \land T]$$

$$\equiv (p \land q) \lor [\neg p \land T]$$

$$\equiv (p \land q) \lor [\neg p \land T]$$

$$\equiv (p \land q) \lor [\neg p \land T]$$

$$\equiv (p \land q) \lor [\neg p \land T]$$

$$\equiv (p \land q) \lor [\neg p \land T]$$

$$\equiv (p \land q) \lor [\neg p \land T]$$

$$\equiv (p \land q) \lor [\neg p \land T]$$

$$\equiv (p \land q) \lor [\neg p \land T]$$

$$\equiv (p \land q) \lor [\neg p \land T]$$

$$\equiv (p \land q) \lor [\neg p \land T]$$

$$\equiv (p \land q) \lor [\neg p \land T]$$

$$\equiv (p \land q) \lor [\neg p \land T]$$

$$\equiv (p \land q) \lor [\neg p \land T]$$

$$\equiv (p \land q) \lor [\neg p \land T]$$

$$\equiv (p \land q) \lor [\neg p \land T]$$

$$\equiv (p \land q) \lor [\neg p \land T]$$

$$\equiv (p \land q) \lor [\neg p \land T]$$

$$\equiv (p \land q) \lor [\neg p \land T]$$

$$\equiv (p \land q) \lor [\neg p \land T]$$

$$\equiv (p \land q) \lor [\neg p \land T]$$

$$\equiv (p \land q) \lor [\neg p \land T]$$

$$\equiv (p \land q) \lor [\neg p \land T]$$

$$\equiv (p \land q) \lor [\neg p \land T]$$

$$\equiv (p \land q) \lor [\neg p \land T]$$

$$\equiv (p \land T)$$

$$\equiv ($$

If we apply the distribution rule, We'd get a $(\neg p \lor q)$

$$\equiv (\neg p \lor q)$$

$$(p \land q) \lor (\neg p \land q) \lor (\neg p \land \neg q) \equiv (p \land q) \lor [(\neg p \land q) \lor (\neg p \land \neg q)]$$

$$\equiv (p \land q) \lor [\neg p \land (q \lor \neg q)]$$

$$\equiv (p \land q) \lor [\neg p \land (q \lor \neg q)]$$

$$\equiv (p \land q) \lor [\neg p \land T]$$

$$\equiv (p \land q) \lor [\neg p \land T]$$

$$\equiv (p \land q) \lor [\neg p]$$

$$\equiv (p \land q) \lor [\neg p \land T]$$

$$\equiv (p \land q) \lor [\neg p \land T]$$

$$\equiv (p \land q) \lor [\neg p \land T]$$

$$\equiv (p \land T)$$

$$\equiv (p \land T)$$

$$\Rightarrow (p \land T)$$

$$\equiv (p \land T)$$

$$\Rightarrow (p \land T)$$

$$\Rightarrow ($$

If we apply the distribution rule, We'd get a $(\neg p \lor q)$

Distributive
$$\equiv (\neg p \lor q)$$

Creates the $(\neg p \lor q)$ we were hoping for.

$$(p \land q) \lor (\neg p \land q) \lor (\neg p \land \neg q) \equiv (p \land q) \lor [(\neg p \land q) \lor (\neg p \land \neg q)]$$

$$\equiv (p \land q) \lor [\neg p \land (q \lor \neg q)]$$

$$\equiv (p \land q) \lor [\neg p \land (q \lor \neg q)]$$

$$\equiv (p \land q) \lor [\neg p \land T]$$

$$\equiv (p \land q) \lor [\neg p \land T]$$

$$\equiv (p \land q) \lor [\neg p \land T]$$

$$\equiv (p \land q) \lor [\neg p \land T]$$

$$\equiv (p \land q) \lor [\neg p \land T]$$

$$\equiv (p \land q) \lor [\neg p \land T]$$

$$\equiv (p \land q) \lor [\neg p \land T]$$

$$\equiv (p \land q) \lor [\neg p \land T]$$

$$\equiv (p \land q) \lor [\neg p \land T]$$

$$\equiv (p \land q) \lor [\neg p \land T]$$

$$\equiv (p \land q) \lor [\neg p \land T]$$

$$\equiv (p \land q) \lor [\neg p \land T]$$

$$\equiv (p \land q) \lor (p \land q)$$

$$\equiv (p \lor p) \land (\neg p \lor q)$$

$$\equiv (p \lor p) \land (\neg p \lor q)$$

$$\equiv (p \lor p) \land (\neg p \lor q)$$

$$\equiv (p \land q) \lor (p \land q)$$

Commutative

 $\equiv (\neg p \lor q)$ Make the expression look exactly like the law (more on this later) Identity

Simplifies the part we want to disappear.

Simplify $T \land (\neg p \lor q)$ to $(\neg p \lor q)$

For every propositions p, q, r the following hold:

Identity

- $-p \wedge T \equiv p$
- $p \vee F \equiv p$

Domination

- $p \lor T \equiv T$
- $-p \wedge F \equiv F$

Idempotent

- $p \lor p \equiv p$
- $p \wedge p \equiv p$

Commutative

- $p \lor q \equiv q \lor p$
- $p \wedge q \equiv q \wedge p$

Associative

- $(p \lor q) \lor r \equiv p \lor (q \lor r)$
- $-(p \wedge q) \wedge r \equiv p \wedge (q \wedge r)$

Distributive

- $p \wedge (q \vee r) \equiv (p \wedge q) \vee (p \wedge r)$
- $p \lor (q \land r) \equiv (p \lor q) \land (p \lor r)$

Absorption

- $p \lor (p \land q) \equiv p$
- $p \land (p \lor q) \equiv p$

Negation

- $-p \lor \neg p \equiv T$
- $-p \land \neg p \equiv F$

$$(p \land q) \lor (\neg p \land q) \lor (\neg p \land \neg q) \equiv (p \land q) \lor [(\neg p \land q) \lor (\neg p \land \neg q)]$$

Stay on target:

We met our intermediate goal.

Don't forget the final goal!

We want to end up at $(\neg p \lor q)$

If we apply the distribution rule, We'd get a $(\neg p \lor q)$

$$\equiv (p \land q) \lor [\neg p \land (q \lor \neg q)]$$

$$\equiv (p \land q) \lor [\neg p \land T]$$

$$\equiv (p \land q) \lor [\neg p]$$

$$\equiv [\neg p] \lor (p \land q)$$

$$\equiv (\neg p \lor p) \land (\neg p \lor q)$$

$$\equiv (p \lor \neg p) \land (\neg p \lor q)$$

$$\equiv T \wedge (\neg p \vee q)$$

$$\equiv (\neg p \lor q) \land T$$

Commutative followed by Domination $\equiv (\neg p \lor q) \land T$

Look exactly like the law, then apply it.

We're done!!!

Commutativity

We had the expression $(p \land q) \lor [\neg p]$

But before we applied the distributive law, we switched the order...why?

The law says $p \lor (q \land r) \equiv (p \lor q) \land (p \lor r)$ not $(q \land r) \lor p \equiv (q \lor p) \land (r \lor p)$

So **technically** we needed to commute first.

Eventually (in about 2 weeks) we'll skip this step. For now, we're doing two separate steps.

Remember this is the "training wheel" stage. The point is to be careful.

More on Our First Proof

We now have an ironclad guarantee that

$$(p \land q) \lor (\neg p \land q) \lor (\neg p \land \neg q) \equiv (\neg p \lor q)$$

Hooray! But we could have just made a truth-table. Why a proof?

Here's one reason.

Proofs don't *just* give us an ironclad guarantee. They're also an explanation of *why* the claim is true.

The key insight to our simplification was "the last two pieces were the vacuous truth parts – the parts where p was false"

That's in there, in the proof.

```
(p \land q) \lor (\neg p \land q) \lor (\neg p \land \neg q) \equiv (p \land q) \lor [(\neg p \land q) \lor (\neg p \land \neg q)] Associative
           The last two terms are "vacuous truth" – they simplify to ¬p
                                                    \equiv (p \land q) \lor [\neg p \land (q \lor \neg q)]
                                                                                                                 Distributive
                                                    \equiv (p \land q) \lor [\neg p \land T] \leftarrow
                                                                                                                    Negation
                                                     \equiv (p \land q) \lor [\neg p]
                                                                                                                       Identity
                                                     \equiv [\neg p] \lor (\underline{p} \land q)
                                                                                                             Commutative
                                                     \equiv (\neg p \lor p) \land (\neg p \lor q)
                                                                                                                 Distributive

olimits p no longer matters in p \wedge
                                                     \equiv (p \vee \neg p) \wedge (\neg p \vee q)
                                                                                                             Commutative
   q if \neg p automatically
                                                     \equiv T \wedge (\neg p \vee q)
                                                                                                                    Negation
   makes the expression true.
                                                     \equiv (\neg p \lor q) \land T
                                                                                                             Commutative
                                                                                                                       Identity
                                                     \equiv (\neg p \lor q)
```

More on Our First Proof

With practice (and quite a bit of squinting) you can see not just the ironclad guarantee, but also the reason why something is true.

That's not easy with a truth table.

Proofs can also communicate intuition about why a statement is true. We'll practice extracting intuition from proofs more this quarter.

Converse, Contrapositive

Implication:

If it's raining, then I have my umbrella.

$$p \rightarrow q$$

Converse:

If I have my umbrella, then it is raining.

$$q \rightarrow p$$

Contrapositive:

$$\neg q \rightarrow \neg p$$
 If I don't have my umbrella, then it is not raining.

Inverse:
$$\neg p \rightarrow \neg q$$
If it is not raining, then I don't have my umbrella.

How do these relate to each other?

p	q	$p \rightarrow q$	$q \rightarrow p$	¬p		$\neg p \rightarrow \neg q$	$\neg q \rightarrow \neg p$
T	Т						
T	F						
F	T						
F	F						

Converse, Contrapositive

Implication: Contrapositive:

$$p \to q \qquad \qquad \neg q \to \neg p$$

Converse:

$$q \rightarrow p$$

_n → _0

Inverse:

An implication and its contrapositive have the same truth value!

p	q	$p \rightarrow q$	$q \rightarrow p$	¬p	⊣q	$\neg p \rightarrow \neg q$	$\neg q \rightarrow \neg p$
T	T	Т	Т	F	F	Т	Т
T	F	F	Т	F	Т	Т	F
F	T	Т	F	Т	F	F	T
F	F	Т	T	Т	T	T	T

Contrapositive

We showed $p \rightarrow q \equiv \neg q \rightarrow \neg p$ with a truth table. Let's do a proof. Try this one on your own. Remember

- 1. Know what you're trying to show.
- 2. Stay on target take steps to get closer to your goal.

Hint: think about your tools.

There are lots of rules with AND/OR/NOT,

but very few with implications...

Or text cse311 to 22333

Contrapositive

$$p \rightarrow q \equiv \neg p \lor q$$
 Law of Implication
$$\equiv q \lor \neg p$$
 Commutativity
$$\equiv \neg \neg q \lor \neg p$$
 Double Negation
$$\equiv \neg q \rightarrow \neg p$$
 Law of Implication

All of our rules deal with ORs and ANDs, let's switch the implication to just use AND/NOT/OR.

And do the same with our target

It's ok to work from both ends. In fact it's a very common strategy!

Now how do we get the top to look like the bottom? Just a few more rules and we're done!

Values get sent along wires connecting gates

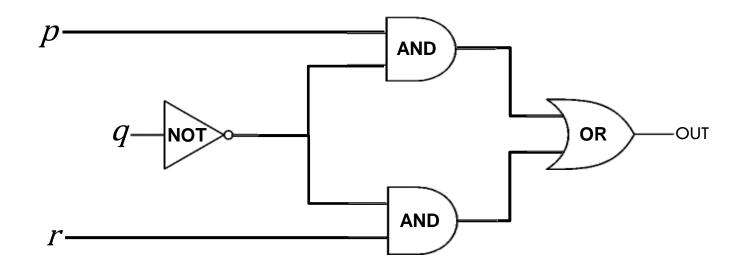

Values get sent along wires connecting gates

$$\neg p \land (\neg q \land (r \lor s))$$

Wires can send one value to multiple gates!

Wires can send one value to multiple gates!

$$(p \land \neg q) \lor (\neg q \land r)$$

More Vocabulary

Vocabulary!

A proposition is a....

Tautology if it is always true.

Contradiction if it is always false.

Contingency if it can be both true and false.

$$p \lor \neg p$$

Tautology

If p is true, $p \lor \neg p$ is true; if p is false, $p \lor \neg p$ is true.

$$p \oplus p$$

Contradiction

If p is true, $p \oplus p$ is false; if p is false, $p \oplus p$ is false.

$$(p \to q) \land p$$

Contingency If p is true and q is true, $(p \rightarrow q) \land p$ is true; If p is true and q is false, $(p \rightarrow q) \land p$ is false.

Another Proof

Let's prove that $(p \land q) \rightarrow (q \lor p)$ is a tautology.

Alright, what are we trying to show?

Another Proof

$$\begin{array}{ll} (p \wedge q) \rightarrow (q \vee p) & \equiv \neg (p \wedge q) \vee (q \vee p) \\ & \equiv (\neg p \vee \neg q) \vee (q \vee p) \\ & \equiv \neg p \vee (\neg q \vee (q \vee p)) \\ & \equiv \neg p \vee ((\neg q \vee q) \vee p) \\ & \equiv \neg p \vee ((\neg q \vee q) \vee p) \\ & \equiv \neg p \vee ((q \vee \neg q) \vee p) \\ & \equiv \neg p \vee (T \vee p) \\ & \equiv \neg p \vee (T \vee p) \\ & \equiv \neg p \vee (p \vee T) \\ & \equiv \neg p \vee p \\ & \equiv \neg p \vee p \\ & \equiv p \vee \neg p \\ & = p \vee \neg p \\ &$$

We're done!

Another Proof

$$\equiv p \lor \neg p \quad \text{Commutative}$$

$$\equiv T \quad \text{Negation}$$

Computing Equivalence

Given two propositions, can we write an algorithm to determine if they are equivalent?

What is the runtime of our algorithm?

Computing Equivalence

Given two propositions, can we write an algorithm to determine if they are equivalent?

Yes! Generate the truth tables for both propositions and check if they are the same for every entry.

What is the runtime of our algorithm?

Every atomic proposition has two possibilities (T, F). If there are n atomic propositions, there are 2^n rows in the truth table.
