CSE 312

Foundations of Computing II

Lecture 2: Permutations, combinations, the Binomial Theorem and more.

PAUL G. ALLEN SCHOOL
OF COMPUTER SCIENCE & ENGINEERING

Grading, syllabus and administrivia

- Please be sure that you read the syllabus carefully!!!!
- Questions?

Survival Tips

- Don't fall behind.
  - Do every single concept check.
  - Do the reading (better yet, ahead of time!)
  - Go through the section problems. Try to solve them. Make sure you understand the solutions.
- Take the homework seriously.
  - Get started early.
  - Come to office hours if you need help.
  - Form study groups!
  - Take academic integrity seriously.

Agenda

- Recap & Examples
- Binomial Theorem
- Multinomial Coefficients
- Inclusion-Exclusion
- Combinatorial Proofs

https://pollev.com/ annakarlin185

Quick Summary

- Sum Rule

  If you can choose from

  – Either one of n options,

  – OR one of m options with NO overlap with the previous n,

  then the number of possible outcomes of the experiment is $n + m$

- Product Rule

  In a sequential process, if there are

  - n_1 choices for the first step,
  - n_2 choices for the second step (given the first choice), …, and
  - n_k choices for the k^{th} step (given the previous choices),

  then the total number of outcomes is $n_1 \times n_2 \times \cdots \times n_k$

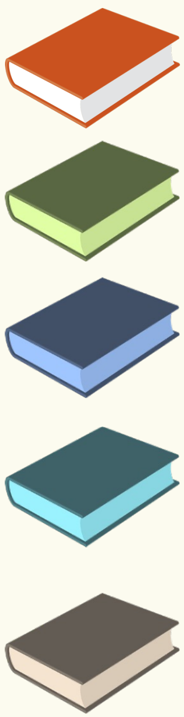
- Complementary Counting

Quick Summary

- K-sequences: How many length k sequences over alphabet of size n? repetition allowed.
  - Product rule ➔ n^K
- K-permutations: How many length k sequences over alphabet of size n, without repetition?
  - Permutation ➔ $\frac{n!}{(n-k)!}$
- K-combinations: How many size k subsets of a set of n distinct elements (without repetition and without order)?
  - Combination ➔ $\binom{n}{k} = \frac{n!}{k!(n-k)!}$

Product rule – Another example

5 books



Alice

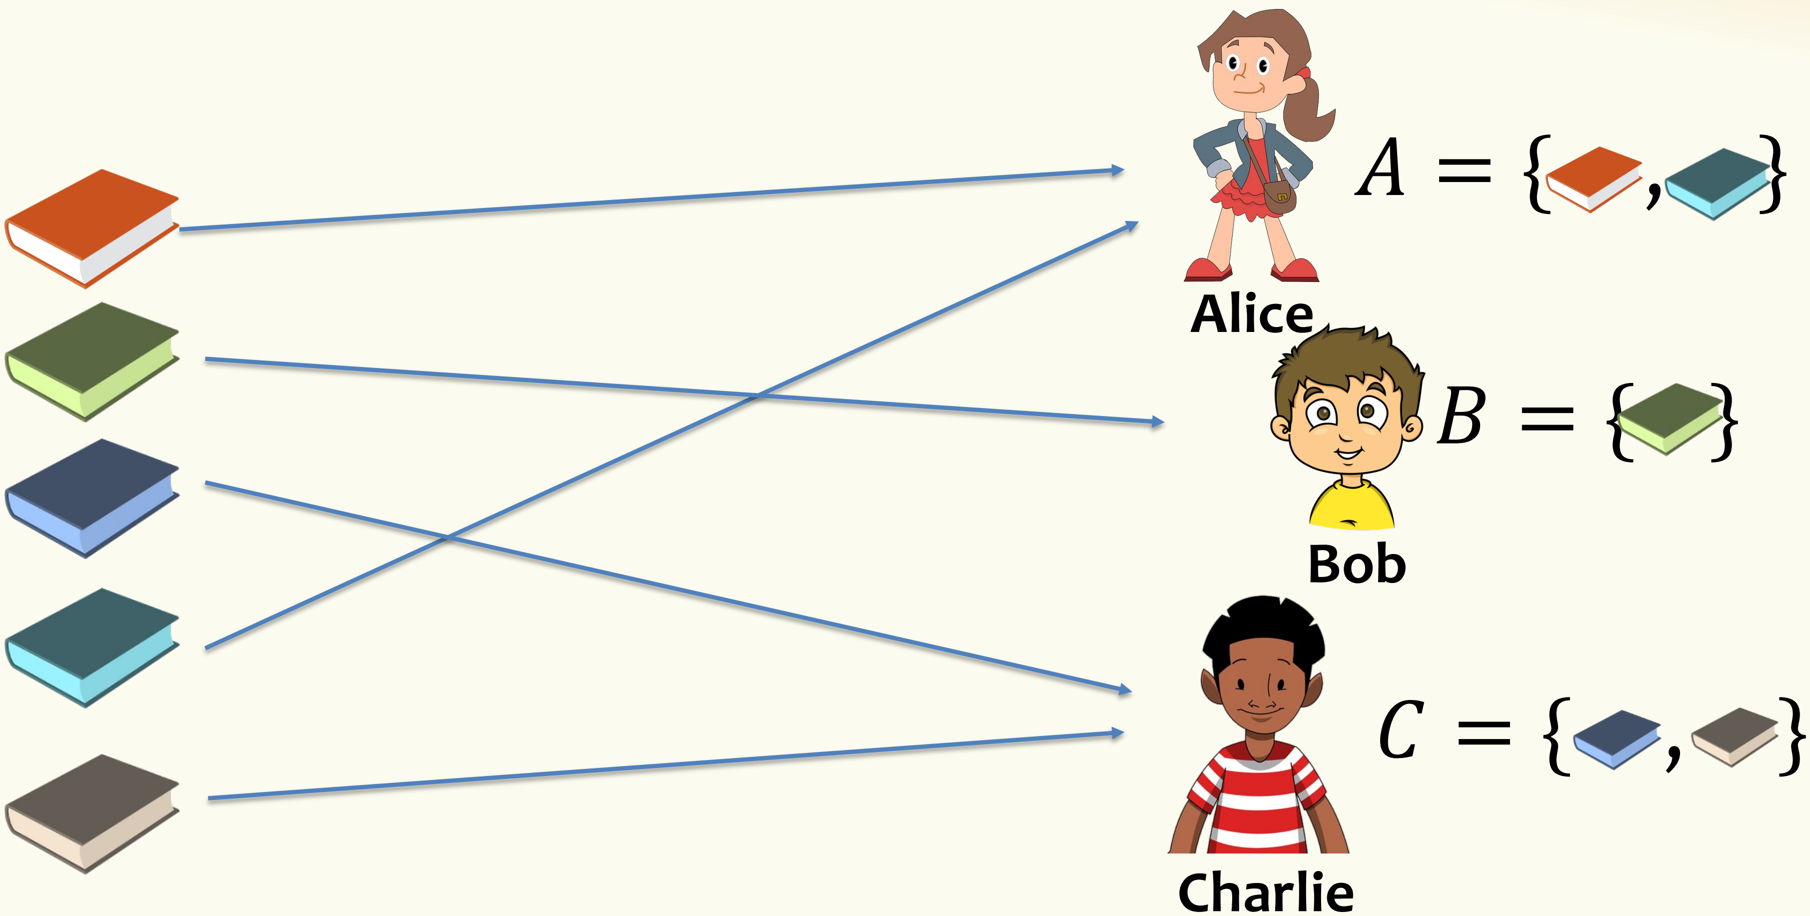
Bob

Charlie

"How many ways are there to distribute 5 books among Alice, Bob, and Charlie?"

Every book to one person, everyone gets ≥ 0 books.

Example Book Assignment



Book assignment – Modeling

Correct?

<u>Poll:</u>

A. right
B. Overcount
C. Undercount
D. No idea

https://pollev.com/annakarlin185

$2^5 = 32$ options

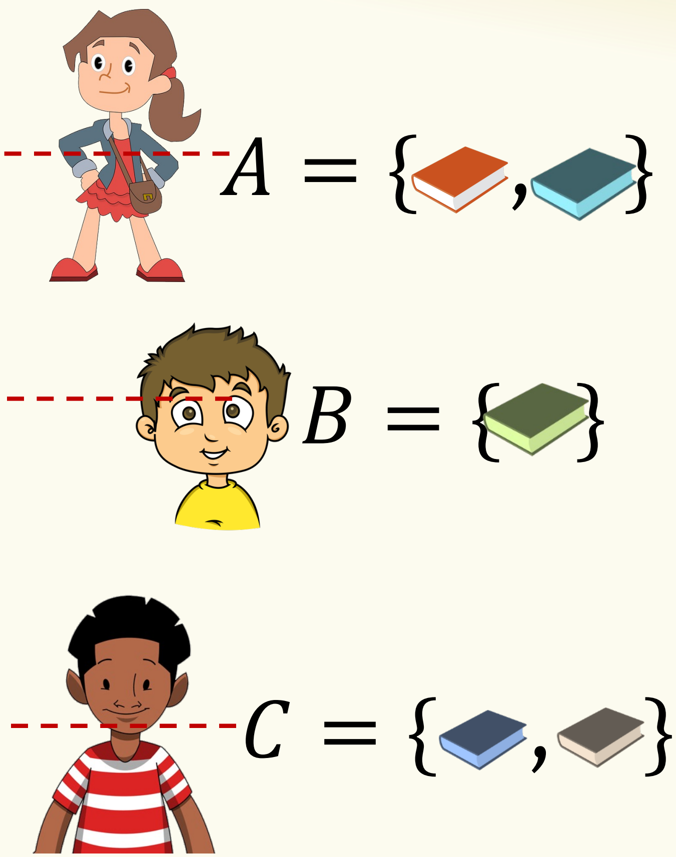
$\times$

$2^5 = 32$ options

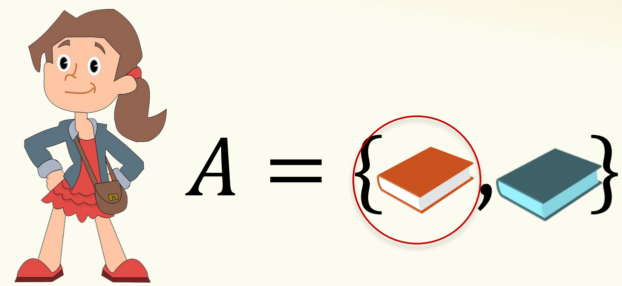
$\times$

$2^5 = 32$ options

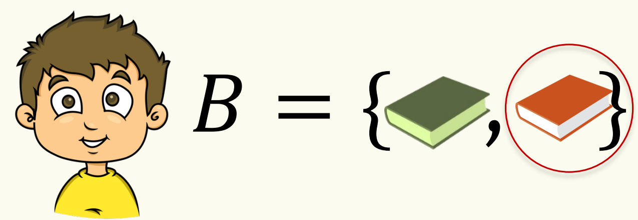
$=$ 32^3 assignment



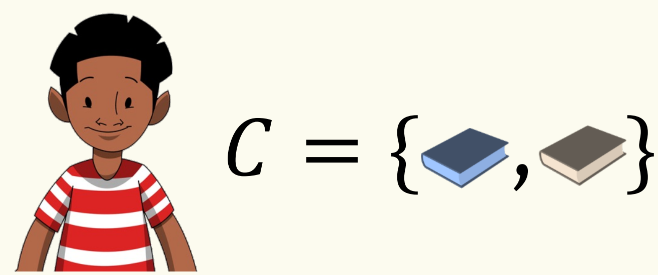
Problem – Overcounting



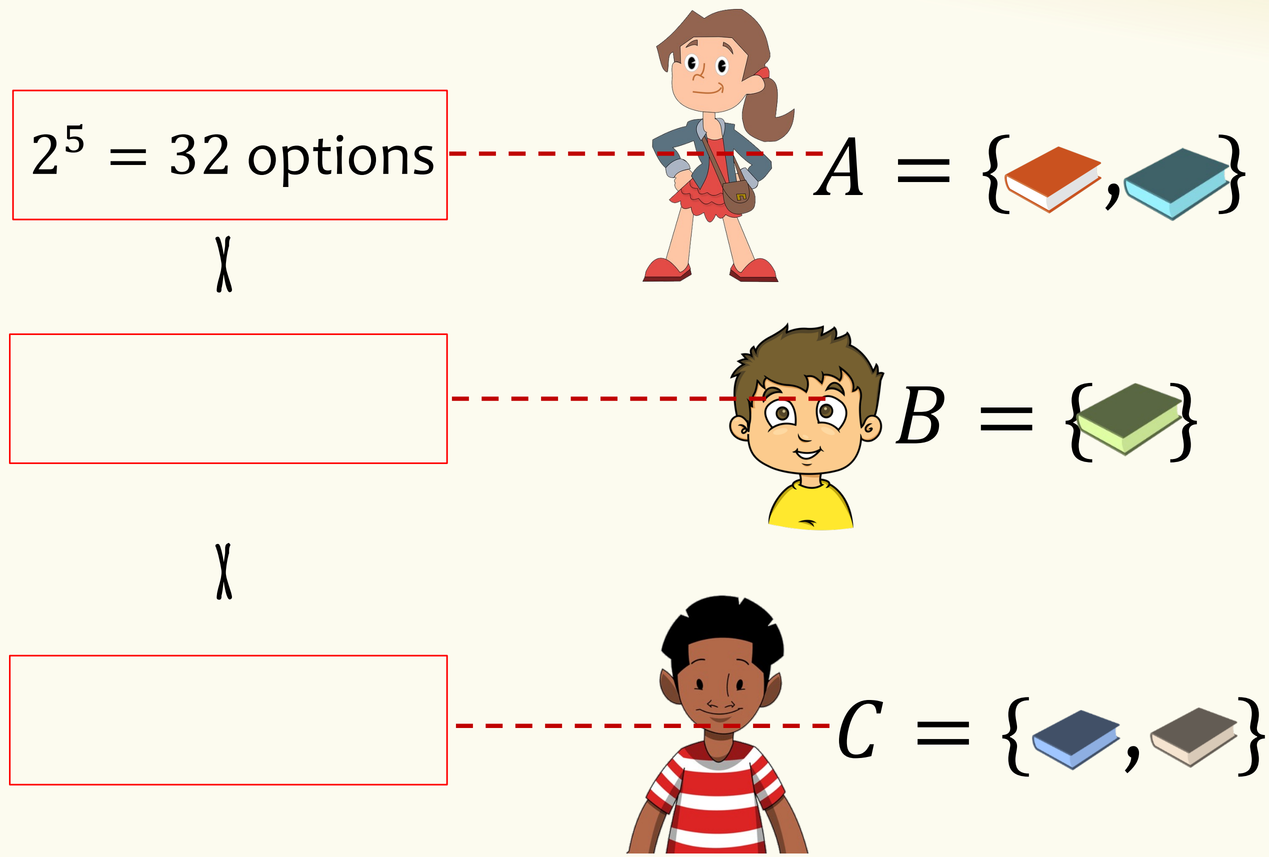
Problem: We are counting some invalid assignments!!!
→ **overcounting**!



What went wrong in the sequential process?
After assigning set A to Alice, set B is no longer a valid option for Bob

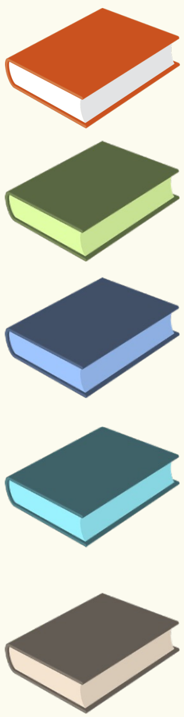


Book assignment – Second try



Product rule – A better way

5 books



> ***"How many ways are there to distribute 5 books among Alice, Bob, and Charlie?"***

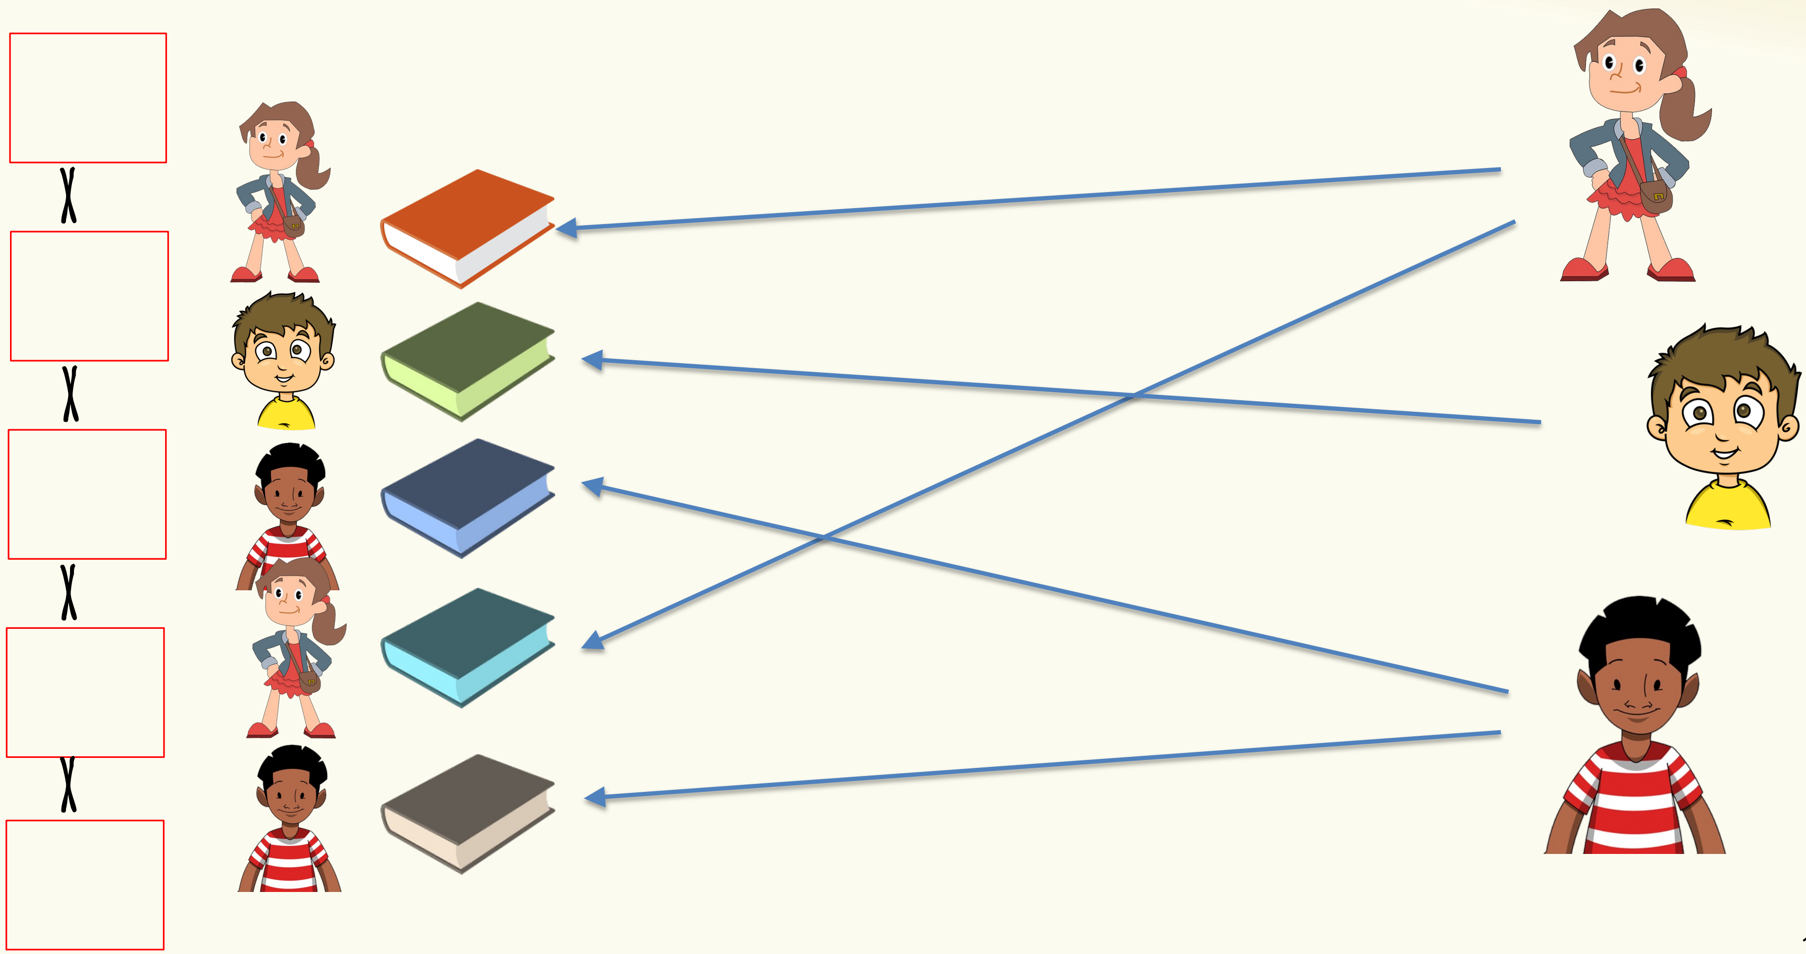
Every book to one person, everyone gets ≥ 0 books.

Alice

Bob

Charlie

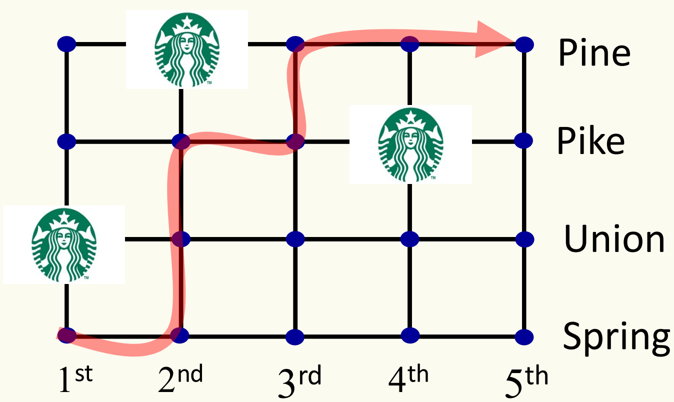
Book assignments – Choices tell you who gets each book



Lesson: Representation of what we are counting is very important!

Think about the various possible ways you could make a sequence of choices that leads to an outcome in the set of outcomes you are trying to count.

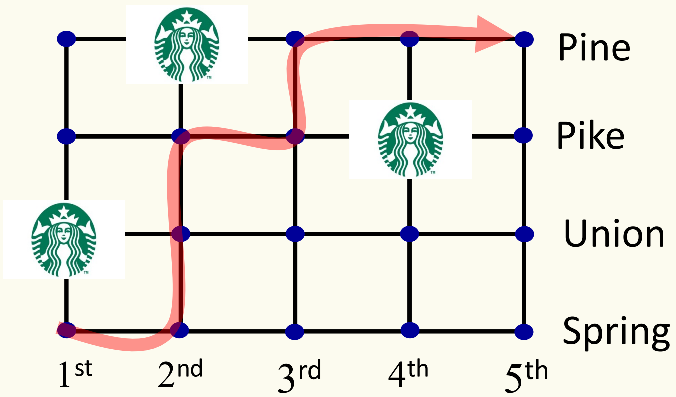
Example – Counting Paths



"How many ways to walk from 1st and Spring to 5th and Pine only going ↑ and → ?

___ ___ ___ ___ ___ ___ ___

Example – Counting Paths -2



"How many ways to walk from 1st and Spring to 5th and Pine only going ↑ and → ?

Poll:

A. 2^7

B. $\frac{7!}{4!}$

C. $\binom{7}{4} = \frac{7!}{4!3!}$

D. $\binom{7}{3} = \frac{7!}{3!4!}$

https://pollev.com/ annakarlin185

Symmetry in Binomial Coefficients

Fact. $\binom{n}{k} = \binom{n}{n-k}$

Symmetry in Binomial Coefficients

Fact. $\binom{n}{k} = \binom{n}{n-k}$

Proof. $\binom{n}{k} = \frac{n!}{k!(n-k)!} = \frac{n!}{(n-k)!k!} = \binom{n}{n-k}$

Why??

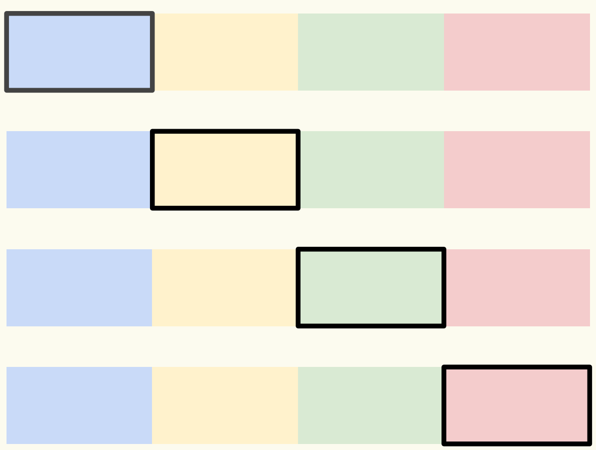
This is called an Algebraic proof,
i.e., Prove by checking algebra

Symmetry in Binomial Coefficients – A different proof

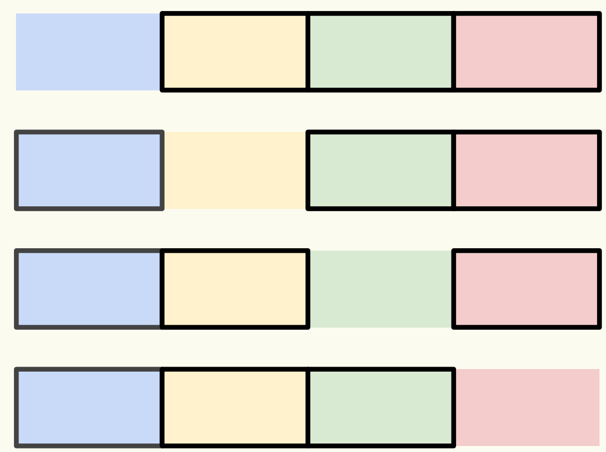
Fact. $\binom{n}{k} = \binom{n}{n-k}$

Two equivalent ways to choose k out of n objects (unordered)

1. Choose which k elements are included
2. Choose which $n - k$ elements are excluded



$$\binom{\mathbf{4}}{\mathbf{1}} = \mathbf{4} = \binom{\mathbf{4}}{\mathbf{3}}$$



Symmetry in Binomial Coefficients – A different proof

Fact. $\binom{n}{k} = \binom{n}{n-k}$

Two equivalent ways to choose k out of n objects (unordered)

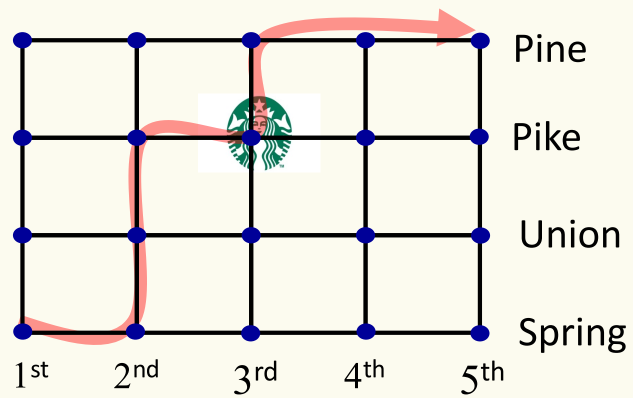
1. Choose which k elements are included
2. Choose which $n-k$ elements are excluded

This is called a combinatorial argument/proof

- Let S be a set of objects
- Show how to count $|S|$ one way => $|S| = N$
- Show how to count $|S|$ another way => $|S| = m$

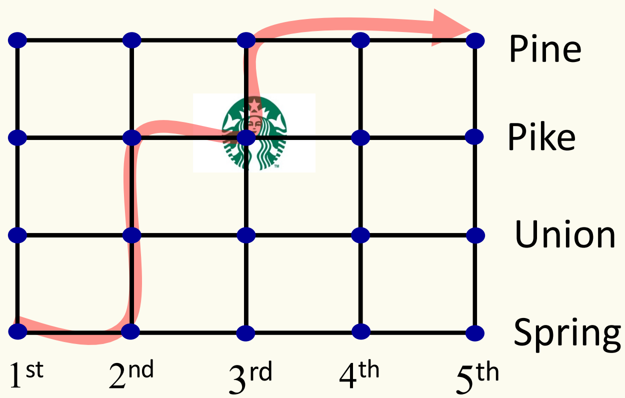
More examples of combinatorial proofs coming soon!

Example – Counting Paths - 3



"How many ways to walk from 1st and Spring to 5th and Pine only going ↑ and → but stopping at Starbucks on 3rd and Pike?"

Example – Counting Paths - 3



"How many ways to walk from 1^{st} and Spring to 5^{th} and Pine only going ↑ and → but stopping at Starbucks on 3^{rd} and Pike?"

Poll:

A. $\binom{7}{3}$

B. $\binom{7}{3}\binom{7}{1}$

C. $\binom{4}{2}\binom{3}{1}$

D. $\binom{4}{2}\binom{3}{2}$

https://pollev.com/ annakarlin185

Agenda

- Recap & Examples
- Binomial Theorem
- Multinomial Coefficients
- Inclusion-Exclusion
- Combinatorial Proofs

Binomial Theorem: Idea

$$
\begin{aligned}
(x+y)^2 &= (x+y)(x+y) \\
&= xx + xy + yx + yy \\
&= x^2 + 2xy + y^2
\end{aligned}
$$

$$(x+y)^4 = (x+y)(x+y)\,(x+y)\,(x+y)$$

$$= xxxx + yyyy + xyxy + yxyy + \ \ldots$$

Binomial Theorem: Idea

Poll: What is the coefficient for xy^3?

A. 4

B. $\binom{4}{1}$

C. $\binom{4}{3}$

D. 3

https://pollev.com/ annakarlin185

$$(x+y)^4 = (x+y)(x+y)\,(x+y)\,(x+y)$$

$$= xxxx + yyyy + xyxy + yxyy + \ \ldots$$

Binomial Theorem: Idea

$$(x + y)^n = (x + y)(x + y)(x + y) \cdots (x + y)$$

Each term is of the form $x^k y^{n-k}$, since each term is is made by multiplying exactly n variables, either x or y.

How many times do we get $x^k y^{n-k}$?

Binomial Theorem: Idea

$$(x+y)^n = (x+y)(x+y)(x+y)\cdots(x+y)$$

Each term is of the form $x^k y^{n-k}$, since each term is is made by multiplying exactly n variables, either x or y.

How many times do we get $x^k y^{n-k}$? The number of ways to choose k of the n variables we multiply to be an x (the rest will be y).

$$\binom{n}{k} = \binom{n}{n-k}$$

Binomial Theorem

Theorem. Let $x, y \in \mathbb{R}$ and $n \in \mathbb{N}$ a positive integer. Then,

$$(x+y)^n = \sum_{k=0}^{n} \binom{n}{k} x^k y^{n-k}$$

Binomial Theorem

Theorem. Let $x, y \in \mathbb{R}$ and $n \in \mathbb{N}$ a positive integer. Then,

$$(x+y)^n = \sum_{k=0}^{n} \binom{n}{k} x^k y^{n-k}$$

Corollary.

$$\sum_{k=0}^{n} \binom{n}{k} = 2^n$$

Agenda

- Combinatorial Proofs

Example – Word Permutations

How many ways to re-arrange the letters in the word "MATH"?

Poll:

A. $\binom{26}{4}$

B. 4^4

C. $4!$

D. I don't know

https://pollev.com/ annakarlin185

Example – Word Permutations

How many ways to re-arrange the letters in the word “MUUMUU”?

______ ______ ______ ______ ______ ______

Example – Word Permutations

How many ways to re-arrange the letters in the word "MUUMUU"?

Choose where the 2 M's go, and then the U's are set **OR**
Choose where the 4 U's go, and then the M's are set

Either way, we get $\binom{6}{2} \cdot \binom{4}{4} = \binom{6}{4} \cdot \binom{2}{2} = \frac{6!}{2!4!}$

Another way to think about it

How many ways to re-arrange the letters in the word "MUUMUU"?

Arrange the 6 letters as if they were distinct.

$M_1U_1U_2M_2U_3U_4$

Then divide by 4! to account for duplicate M's and divide by 2! to account for duplicate U's.

Yields $\frac{6!}{2!4!}$

Another example – Word Permutations

How many ways to re-arrange the letters in the word “GODOGGY”?

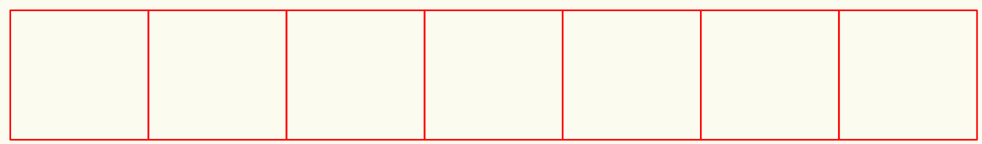
Poll:

A. $7!$

B. $\frac{7!}{3!}$

C. $\frac{7!}{3!2!1!1!}$

D. $\binom{7}{3} \cdot \binom{4}{2} \cdot 2!$



https://pollev.com/ annakarlin185

Multinomial coefficients

If we have k types of objects, with n_1 of the first type, n_2 of the second type, … , n_k of the kth type, where $n = n_1 + n_2 + \cdots + n_k$ then the number of arrangements of the n objects is

$$\binom{n}{n_1, n_2, \dots, n_k} = \frac{n!}{n_1!\, n_2! \cdots n_k\,!}$$

Note that objects of the same type are indistinguishable.

Example – Word Permutations

How many ways to re-arrange the letters in the word "GODOGGY"?

n= 7 (length of sequence)   K = 4 types = {G, O, D, Y}

$n_1 = 3, n_2 = 2, n_3 = 1, n_4 = 1$

$$\binom{6}{4,2,1,1} = \frac{6!}{2!4!1!1!}$$

Agenda

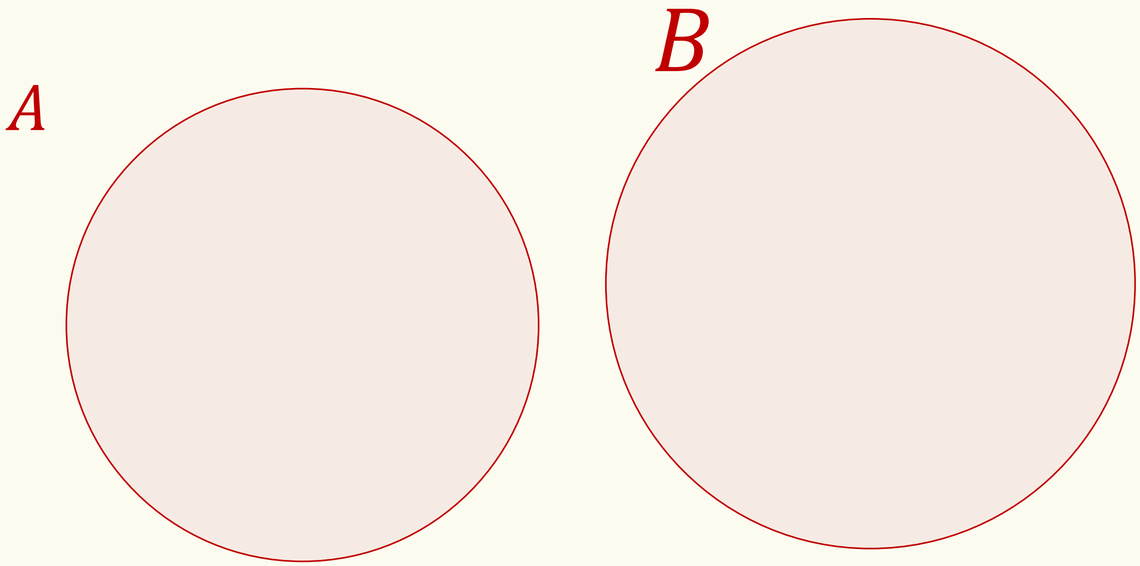
- Combinatorial Proofs

Recap Disjoint Sets

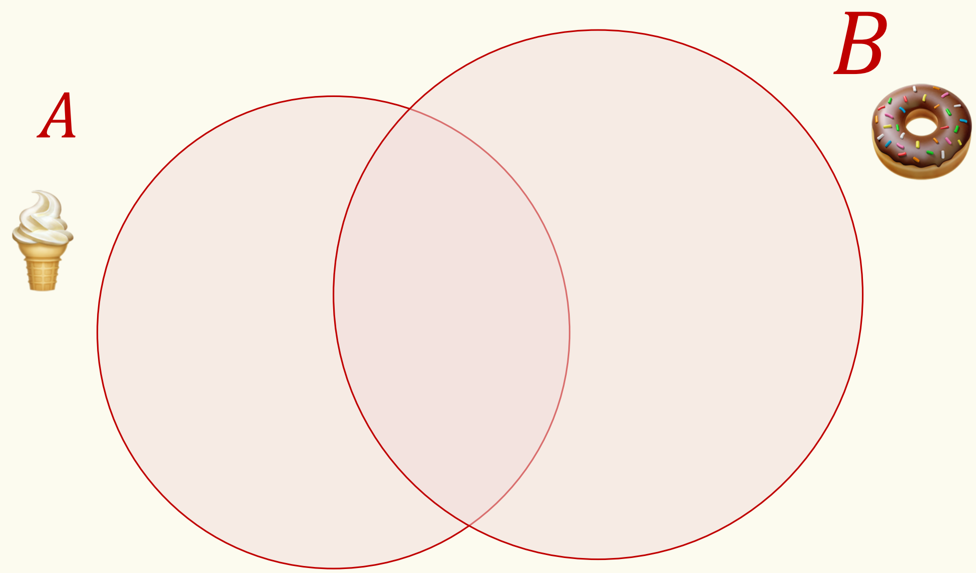
Sets that do not contain common elements ($A \cap B = \emptyset$)



Sum Rule: $|A \cup B| = |A| + |B|$

Inclusion-Exclusion

But what if the sets are not disjoint?



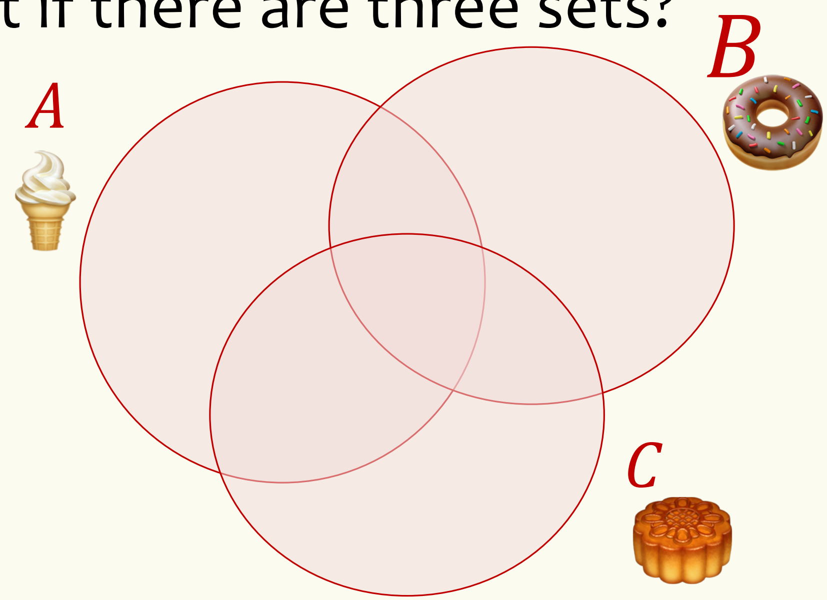
$|A| = 43$
$|B| = 20$
$|A \cap B| = 7$
$|A \cup B| = ???$

Fact. $|A \cup B| = |A| + |B| - |A \cap B|$

Inclusion-Exclusion

Not drawn to scale

What if there are three sets?



$|A| = 43$
$|B| = 20$
$|C| = 35$
$|A \cap B| = 7$
$|A \cap C| = 16$
$|B \cap C| = 11$
$|A \cap B \cap C| = 4$
$|A \cup B \cup C| = ???$

Fact.

$$
\begin{aligned}
|A \cup B \cup C| = {} & |A| + |B| + |C| \\
& - |A \cap B| - |A \cap C| - |B \cap C| \\
& + |A \cap B \cap C|
\end{aligned}
$$

Inclusion-Exclusion

Let A, B be sets. Then

$$|A \cup B| = |A| + |B| - |A \cap B|$$

In general, if $A_1, A_2, \ldots, A_n$ are sets, then

$$|A_1 \cup A_2 \cup \cdots \cup A_n| = singles\ - doubles + triples\ - quads +\ \ldots$$
$$= (|A_1| + \cdots + |A_n|)\ - (|A_1 \cap A_2| +\ \ldots + |A_{n-1} \cap A_n|) +\ \ldots$$

Agenda

- Recap & Examples
- Binomial Theorem
- Multinomial Coefficients
- Inclusion-Exclusion
- Combinatorial Proofs

Combinatorial proof: Show that *M* = *N*

- Let S be a set of objects
- Show how to count $|S|$ one way => $|S| = M$
- Show how to count $|S|$ another way => $|S| = N$
- Conclude that *M* = *N*

Binomial Coefficient – Many interesting and useful properties

$$\binom{n}{k} = \frac{n!}{k!\,(n-k)!} \qquad \binom{n}{n} = 1 \qquad \binom{n}{1} = n \qquad \binom{n}{0} = 1$$

Fact. $\binom{n}{k} = \binom{n}{n-k}$ Symmetry in Binomial Coefficients

Fact. $\binom{n}{k} = \binom{n-1}{k-1} + \binom{n-1}{k}$ Pascal's Identity

Fact. $\sum_{k=0}^{n}\binom{n}{k} = 2^n$ Follows from Binomial theorem

Pascal's Identities

Fact. $\binom{n}{k} = \binom{n-1}{k-1} + \binom{n-1}{k}$

How to prove Pascal's identity?

Algebraic argument:

$$\binom{n-1}{k-1} + \binom{n-1}{k} = \frac{(n-1)!}{(k-1)!\,(n-k)!} + \frac{(n-1)!}{k!\,(n-1-k)!}$$
$$= 20 \textit{ years later} \ldots$$
$$= \frac{n!}{k!\,(n-k)!}$$
$$= \binom{n}{k}$$

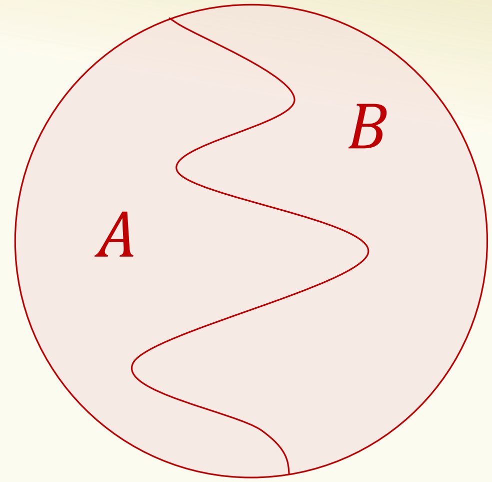
Hard work and not intuitive

Let's see a combinatorial argument

Example – Binomial Identity

Fact. $\binom{n}{k} = \binom{n-1}{k-1} + \binom{n-1}{k}$

$$|S| \quad = \quad |A| \quad + \quad |B|$$



$S = A \cup B$, disjoint

S: the set of size k subsets of $[n] = \{1, 2, \cdots, n\}$ ➔ $|S| = \binom{n}{k}$

A: the set of size k subsets of $[n]$ including n

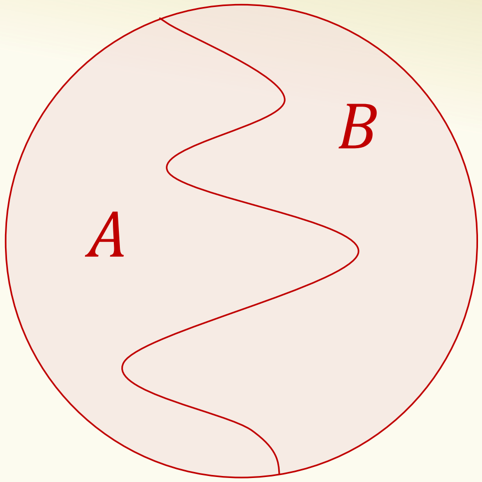
B: the set of size k subsets of $[n]$ NOT including n

Sum rule:
$|A \cup B| = |A| + |B|$

Example – Binomial Identity

Fact. $\binom{n}{k} = \binom{n-1}{k-1} + \binom{n-1}{k}$

$|S| \quad = \quad |A| \quad + \quad |B|$



S: the set of size k subsets of $[n] = \{1, 2, \cdots, n\}$ ➔ $|S| = \binom{n}{k}$

e.g.: $n = 4, \quad S = \{\{1,2\}, \{1,3\}, \{1,4\}, \{2,3\}, \{2,4\}, \{3,4\}\}$

A: the set of size k subsets of $[n]$ including n

$A = \{\{1,4\}, \{2,4\}, \{3,4\}\}. \qquad n = 4$

B: the set of size k subsets of $[n]$ NOT including n

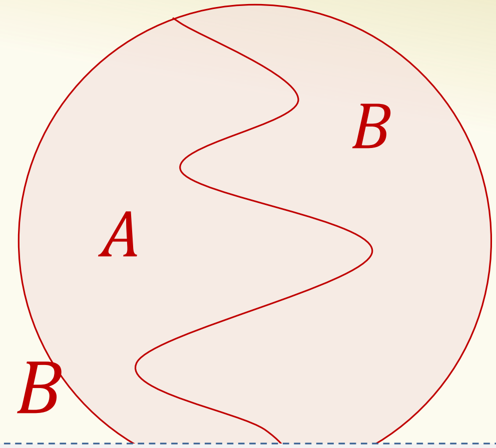
$B = \{\{1,2\}, \{1,3\}, \{2,3\}\}$

Example – Binomial Identity

Fact. $\binom{n}{k} = \binom{n-1}{k-1} + \binom{n-1}{k}$

$|S|$ $\qquad$ $|A|$ $\qquad$ $|B|$

$S = A \cup B$



S: the set of size k subsets of $[n] = \{1, 2, \cdots, n\}$

A: the set of size k subsets of $[n]$ including n

n is in set, need to choose $k-1$ elements from $[n-1]$

$$|A| = \binom{n-1}{k-1}$$

B: the set of size k subsets of $[n]$ NOT including n

n not in set, need to choose k elements from $[n-1]$

$$|B| = \binom{n-1}{k}$$

Pascal's triangle

$$\binom{n}{k} = \binom{n-1}{k-1} + \binom{n-1}{k}$$

$$\begin{array}{c}
1 \\
1 \quad 1 \\
1 \quad 2 \quad 1 \\
1 \quad 3 \quad 3 \quad 1 \\
1 \quad 4 \quad 6 \quad 4 \quad 1 \\
1 \quad 5 \quad 10 \quad 10 \quad 5 \quad 1 \\
1 \quad 6 \quad 15 \quad 20 \quad 15 \quad 6 \quad 1 \\
1 \quad 7 \quad 21 \quad 35 \quad 35 \quad 21 \quad 7 \quad 1
\end{array}$$

$$\begin{array}{c}
\binom{0}{0} \\
\binom{1}{0} \quad \binom{1}{1} \\
\binom{2}{0} \quad \binom{2}{1} \quad \binom{2}{2} \\
\binom{3}{0} \quad \binom{3}{1} \quad \binom{3}{2} \quad \binom{3}{3} \\
\binom{4}{0} \quad \binom{4}{1} \quad \binom{4}{2} \quad \binom{4}{3} \quad \binom{4}{4} \\
\binom{5}{0} \quad \binom{5}{1} \quad \binom{5}{2} \quad \binom{5}{3} \quad \binom{5}{4} \quad \binom{5}{5}
\end{array}$$

combinatorial argument/proof

- Elegant
- Simple
- Intuitive

Algebraic argument

- Brute force
- Less Intuitive

Combinatorial Proof?

Fact. $\sum_{k=0}^{n}\binom{n}{k} = 2^n$
