Course Challenge-Problem Policy

Fall 2011

- “Challenge problems” are designed to have little (but some) impact on your grade whether you do them or not.
- Challenge problems provide an opportunity to work on something interesting and optional.
- Challenge problems will typically allow you to get 2–5% of additional credit on an assignment, yet they will typically be much more difficult than this credit amount suggests.
- You should not attempt a challenge problem until you have finished the rest of an assignment. The graders may ignore challenge problems on homeworks that are not in good shape otherwise.
- Challenge problems may be less carefully specified and less carefully calibrated for how difficult/time-consuming they are.
