

CSE341: Programming Languages Lecture 26

Course Victory Lap

Dan Grossman Spring 2016

Final Exam

As also indicated in class-list email:

- Next Monday, 8:30-10:20
 - Intention is to focus primarily on material since the midterm – Including topics on homeworks and not on homeworks
 - May also have a little ML, just like the course has had
- You will need to write code and English

2

Victory Lap

A victory lap is an extra trip around the track

By the exhausted victors (us) ☺

Review course goals

- Slides from Introduction and Course-Motivation

Some big themes and perspectives

- Stuff for five years from now more than for the final

Do your course evaluations!!!

Spring 2016

CSE341: Programming Languages

Thank you!

Huge thank-you to your TAs

Great team effort

[From Lecture 1]

- And how these pieces fit together

- They let many of the concepts "shine"

"look different" or actually be slightly different

Not using *mutation* (assignment statements) (!)
Using *first-class functions* (can't explain that yet)

· Use ML, Racket, and Ruby languages:

In many ways simpler than JavaBig focus on *functional programming*

- Deep understanding of material despite all having different 341 instructors
- Great sections, timely grading, etc., etc.

Spring 2016

CSE341: Programming Languages

· Many essential concepts relevant in any programming language

- Using multiple languages shows how the same concept can

Thank you!

- And a huge thank you to all of you
 - Great attitude about a very different view of software
 - Good class attendance and questions
 - Occasionally laughed at stuff ©
- Computer science ought to be challenging and fun!

Spring 2016

But many other topics too
Spring 2016
CSE341: Progr

CSE341: Programming Languages

[From Lecture 1]

Learning to think about software in this "PL" way will make you a better programmer even if/when you go back to old ways

It will also give you the mental tools and experience you need for a lifetime of confidently picking up new languages and ideas

[Somewhat in the style of The Karate Kid movies (1984, 2010)]

Spring 2016

CSE341: Programming Language

[From Course Motivation]

- No such thing as a "best" PL
- · Fundamental concepts easier to teach in some (multiple) PLs
- A good PL is a relevant, elegant interface for writing software
 There is no substitute for precise understanding of PL semantics
- Functional languages have been on the leading edge for decades
 Ideas have been absorbed by the mainstream, but very slowly
 - First-class functions and avoiding mutation increasingly essential
 - Meanwhile, use the ideas to be a better C/Java/PHP hacker
- Many great alternatives to ML, Racket, and Ruby, but each was chosen for a reason and for how they complement each other

Spring 2016

7

CSE341: Programming Languages

8

[From Course Motivation]

SML, Racket, and Ruby are a useful combination for us

	dynamically typed	statically typed
functional	Racket	SML
object-oriented	Ruby	Java

ML: polymorphic types, pattern-matching, abstract types & modules *Racket*: dynamic typing, "good" macros, minimalist syntax, eval *Ruby*: classes but not types, very OOP, mixins [and much more]

Really wish we had more time: Haskell: laziness, purity, type classes, monads Prolog: unification and backtracking [and much more]

Spring 2016

CSE341: Programming Languages

Some other highlights

- Function closures are *really* powerful and convenient...
 ... and implementing them is not magic
- Datatypes and pattern-matching are really convenient...
 ... and exactly the opposite of OOP decomposition
- Sound static typing prevents certain errors...
 ... and is inherently approximate
- Subtyping and generics allow different kinds of code reuse...
 ... and combine synergistically
- · Modularity is really important; languages can help

Spring 2016

CSE341: Programming Languages

11

Benefits of No Mutation

[An incomplete list]

- 1. Can freely alias or copy values/objects: Unit 1
- 2. More functions/modules are equivalent: Unit 4
- 3. No need to make local copies of data: Unit 5
- 4. Depth subtyping is sound: Unit 8

State updates are appropriate when you are modeling a phenomenon that is inherently state-based

A fold over a collection (e.g., summing a list) is not!

Spring 2016 CSE341: Programming Languages

10

From the syllabus

Successful course participants will:

- Internalize an accurate understanding of what functional and object-oriented programs mean
- Develop the skills necessary to learn new programming languages quickly
- Master specific language concepts such that they can recognize them in strange guises
- Learn to evaluate the power and elegance of programming languages and their constructs
- Attain reasonable proficiency in the ML, Racket, and Ruby languages and, as a by-product, become more proficient in languages they already know
