

The Hardware/Software Interface

CSE 351 Winter 2024

Instructor:

Justin Hsia

Teaching Assistants:

Adithi Raghavan

Aman Mohammed

Connie Chen

Eyoel Gebre

Jiawei Huang

Malak Zaki

Naama Amiel

Nathan Khuat

Nikolas McNamee

Pedro Amarante

Will Robertson

AN x64 PROCESSOR IS SCREAMING ALONG AT BILLIONS OF CYCLES PER SECOND TO RUN THE XNU KERNEL, WHICH IS FRANTICALLY WORKING THROUGH ALL THE POSIX-SPECIFIED ABSTRACTION TO CREATE THE DARWIN SYSTEM UNDERLYING OS X, WHICH IN TURN IS STRAINING ITSELF TO RUN FIREFOX AND ITS GECKO RENDERER, WHICH CREATES A FLASH OBJECT WHICH RENDERS DOZENS OF VIDEO FRAMES EVERY SECOND

BECAUSE I WANTED TO SEE A CAT JUMP INTO A BOX AND FALL OVER.

I AM A GOD.

<http://xkcd.com/676/>

A detailed, colorful micrograph of a microchip die, showing a complex grid of circuitry and various colored regions (purple, blue, yellow, green, red) representing different functional blocks and interconnects.

Quarter Specifics

Course Staff

- ❖ Instructor: just call me Justin
 - CSE Associate Teaching Professor
 - Raising a toddler takes up energy and dictates my schedule

- ❖ TAs:

- ❖ More than anything, we want you to feel...
 - ✓ Comfortable and welcome in this space
 - ✓ Able to learn and succeed in this course
 - ✓ Comfortable reaching out if you need help or want change

Bookmarks

- ❖ Website: <https://courses.cs.washington.edu/courses/cse351/24wi/>
 - Schedule, policies, materials, tutorials, assignment specs, etc.
- ❖ Ed Course: <https://edstem.org/us/courses/50549/>
 - Discussion: announcements, ask and answer questions
 - Lessons: lessons, practice problems, homework
- ❖ Linked from website and Ed
 - Canvas: surveys, grade book, Zoom links
 - Gradescope: lab submissions, take-home exams
 - Panopto: lecture recordings

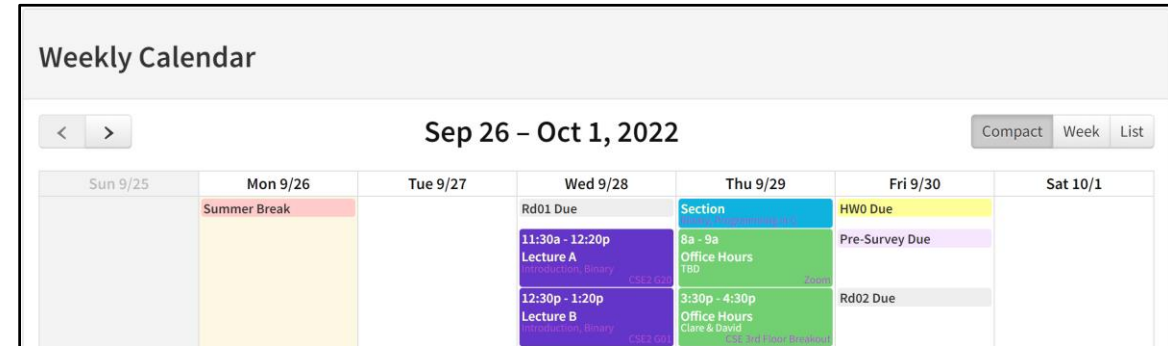

Grading

- ❖ **Lesson Problems: 6%** 
 - Can reveal solution after one attempt (completion)
- ❖ **Homework: 20% total** 
 - Unlimited submission attempts (autograded correctness)
- ❖ **Labs: 40% total** 
 - Last submission graded (correctness)
- ❖ **Exams: Midterm (16%) and Final (16%)** 
 - Take-home; individual, but some discussion permitted
- ❖ **EPA: Effort, Participation, and Altruism (2%)**

Support Hours

❖ Check Weekly Calendar on website for scheduled support hours:

- In-person or virtual, but NOT hybrid
- Zoom meeting links found in Zoom tab within Canvas

❖ All support hours will use a Google Sheets queue:

- Fill out first 3 columns to enter queue:

| Name(s) | Category | Description | Time Queued | Staff | Status |
|-----------|-----------|---|-------------|--------|--------|
| Example 1 | Concept | Question about floating point encoding range. | | Justin | Done |
| Example 2 | Debugging | Lab 5: running into a segfault in mm_malloc after reaching end of the heap. | | Justin | Done |
| Example 3 | Spec | Lab 1a: confusion over within same block examples | | Justin | Done |
| Example 4 | Tools | GDB: how do I examine memory on the stack? | | Justin | Done |

❖ We encourage you to chat with other students if the TAs are busy!

In-Person Support Hours

- ❖ Allen 3rd & 4th floor breakouts
 - Up the stairs in the CSE Atrium (Allen Center, not Gates)
 - The open areas with the whiteboard walls are the breakouts!

Lecture Polls and Discussions

- ❖ Increase learning, test your understanding, increase student interactions, makes the class more engaging and fun
 - Lot of research supports its effectiveness:
- ❖ Polls on technical material will be multiple-choice and short answer
 - You haven't mastered the material yet; mistakes are part of the process!
- ❖ Discussion questions will be more open-ended
 - Be respectful of others' opinions and experiences
- ❖ Respond on Lecture Ed lesson for credit (extra late day tokens) and we will use *random call* to solicit live responses from audience
 - Don't need to be correct, just want the feedback of what was discussed

To-Do List

❖ Admin

- Explore/read the course website *thoroughly*, especially the syllabus
- Check that you can access Ed Discussion & Lessons
- **Get your machine set up to access the CSE Linux environment (attu or cancun) *as soon as possible***
- Optionally, sign up for CSE 391: System and Software Tools

❖ Assignments

- Pre-Course Survey and hw0 due Friday (1/5)
- HW1 and Lab 0 due Monday (1/8)
- Lessons quiz questions due 11:59 pm *after* the associated lecture

A detailed, colorful microchip die image showing intricate circuit patterns in shades of purple, blue, yellow, and red. The text is overlaid on this background.

Binary and Numerical Representation

Lesson Summary

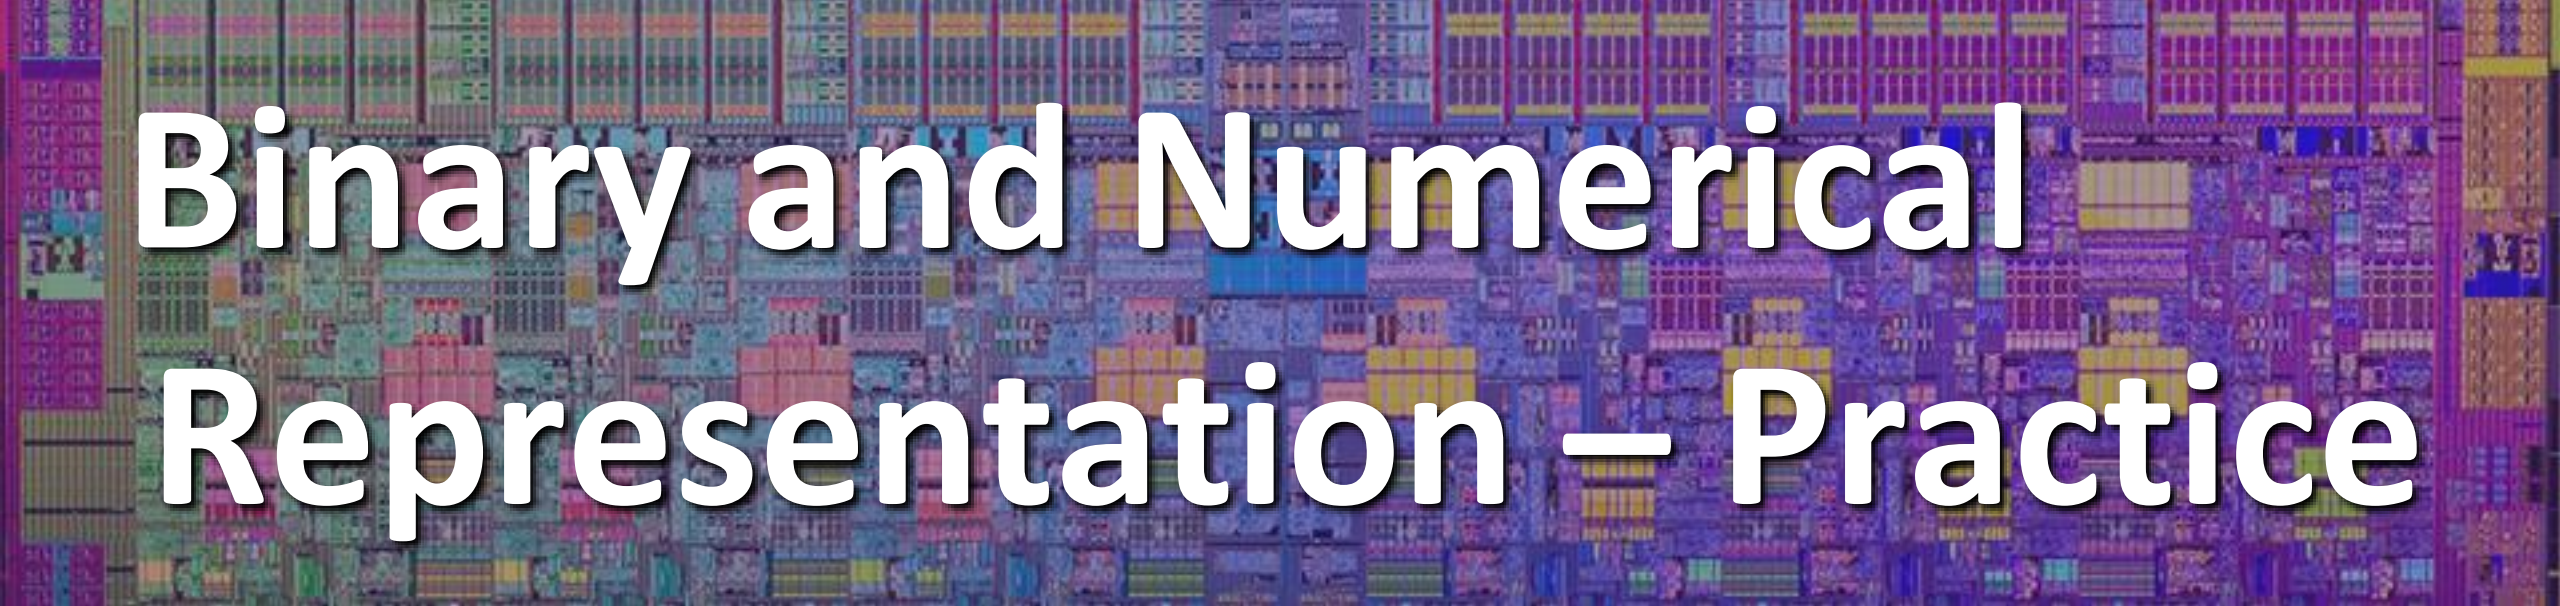

- ❖ Humans think about numbers in decimal; computers think about numbers in binary
 - Base conversion: digit d in position i in base b has a decimal value of $d \times b^i$
 - Changing bases does *not* change the value; just a different representation
 - Hexadecimal (base 16, prefix 0x) is more human-readable than binary (base 2, prefix 0b)
 - Unit of data in a computer is **1 byte = 8 bits = 2 hex digits**
- ❖ Binary encoding can represent *anything!*
 - Computer/program needs to know how to interpret the bits

| Base 10 | Base 2 | Base 16 |
|---------|--------|---------|
| 0 | 0b0000 | 0x0 |
| 1 | 0b0001 | 0x1 |
| 2 | 0b0010 | 0x2 |
| 3 | 0b0011 | 0x3 |
| 4 | 0b0100 | 0x4 |
| 5 | 0b0101 | 0x5 |
| 6 | 0b0110 | 0x6 |
| 7 | 0b0111 | 0x7 |
| 8 | 0b1000 | 0x8 |
| 9 | 0b1001 | 0x9 |
| 10 | 0b1010 | 0xA |
| 11 | 0b1011 | 0xB |
| 12 | 0b1100 | 0xC |
| 13 | 0b1101 | 0xD |
| 14 | 0b1110 | 0xE |
| 15 | 0b1111 | 0xF |

Lesson Q&A

- ❖ Learning Objectives:
 - Convert between binary, decimal, and hexadecimal number representations.
 - Given an encoding scheme, decode and encode binary to/from its intended representation.
 - Identify limitations of given encoding schemes.

- ❖ What lingering questions do you have from the lesson?
 - Introduce yourself to your neighbors and chat about the lesson for a few minutes to come up with questions

A detailed, colorful microchip or circuit board pattern serves as the background for the title text. The pattern consists of a dense grid of small, multi-colored squares and rectangles in shades of purple, blue, green, and yellow, creating a complex, abstract digital landscape.

Binary and Numerical Representation – Practice

Polling Questions

❖ What is the *decimal value* of the numeral 107_8 ?

A. 71

B. 87

C. 107

D. 568

❖ Represent $0b100110110101101$ in hex.

❖ What is the decimal number 108 in hex?

A. 0x6C

B. 0xA8

C. 0x108

D. 0x612

❖ Represent 0x3C9 in binary.

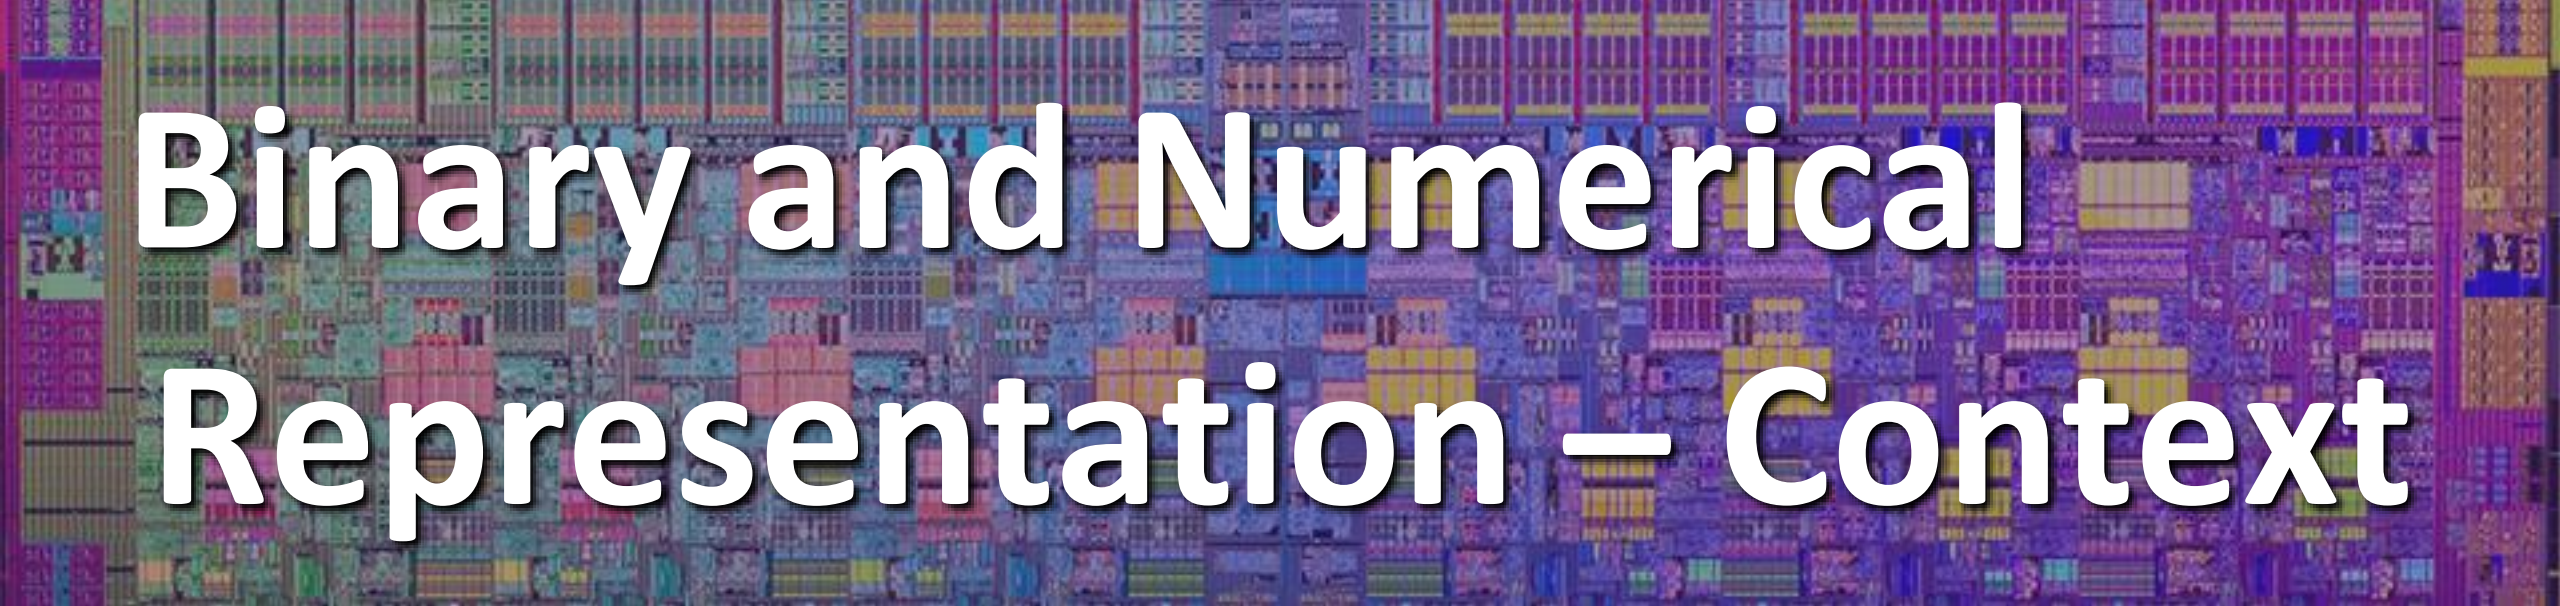

Homework Setup

- ❖ Binary alphabet using five 4-bit numbers stacked on top of each other:

- ❖ What string of 5 hex digits represents a “C”?

| | | | |
|--|--|--|--|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

A background image of a microchip die, showing a complex grid of circuitry in various colors like purple, blue, and yellow.

Binary and Numerical Representation – Context

Why Base 2?

❖ Electronic implementation

- Easy to store with bi-stable elements
- Reliably transmitted on noisy and inaccurate wires

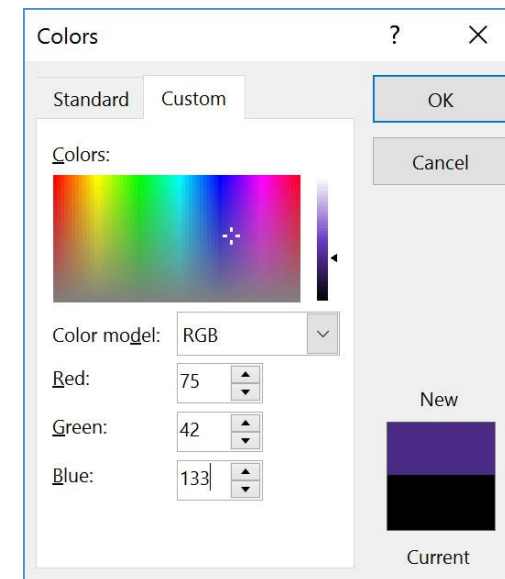

❖ Other bases possible, but not yet viable:

- DNA data storage (base 4: A, C, G, T) is hot @UW
- Quantum computing

Binary Encoding – Colors

- ❖ RGB – Red, Green, Blue
 - Additive color model (light): byte (8 bits) for each color
 - Commonly seen in hex (in HTML, photo editing, etc.)
 - Examples: **Blue**→0x0000FF, **Gold**→0xFFD700, **White**→0xFFFFFF, **Deep Pink**→0xFF1493

Binary Encoding – Characters/Text

- ❖ ASCII Encoding (www.asciitable.com)
 - American Standard Code for Information Interchange

| Dec | Hx | Oct | Char | Dec | Hx | Oct | Html | Chr | Dec | Hx | Oct | Html | Chr | Dec | Hx | Oct | Html | Chr |
|-----|----|-----|-----------------------------|-----|----|-----|-------|-------|-----|----|-----|-------|-----|-----|----|-----|--------|-----|
| 0 | 0 | 000 | NUL (null) | 32 | 20 | 040 | | Space | 64 | 40 | 100 | @ | @ | 96 | 60 | 140 | ` | ` |

What's Missing?

Binary Encoding – Characters/Text

- ❖ ASCII Encoding (www.asciitable.com)
 - *American* Standard Code for Information Interchange
- ❖ Created in 1963
 - Memory was expensive, 32KB in brand new machines
 - *Economic incentive* to use fewer bits for encoding
- ❖ **Design Goals:**
 - Represent everything on an *American* typewriter as *efficiently* as possible
 - Organize similar characters together
 - Numbers, uppercase, lowercase, then other stuff

Binary Encoding – Unicode & Emoji

- ❖ Unicode Standard is managed by the Unicode Consortium
 - “Universal language” that uses 1-4 bytes to represent a much larger range of characters/languages, including emoji
 - Adds new emojis every year, though adoption often lags: 🥷 (ninja)
 - <https://emojipedia.org/new/>
- ❖ Emojipedia demo: <http://www.emojipedia.org>
 - Taco: 🌮 (added 2015)
 - Code points: U+1F32E
 - Display (as of 2023):
 -  Apple
 -  Google Android
 -  Samsung
 -  Windows 11
 -  WhatsApp
 -  Twitter
 -  Facebook

Discussion Question

- ❖ Discuss the following question(s) in groups of 3-4 students
 - I will call on a few groups afterwards so please be prepared to share out
 - Be respectful of others' opinions and experiences
- ❖ The Unicode Consortium publicly solicits proposals from the public for new emoji to add to future standards
 - What do you think some of the decision factors are (or should be) in how many and which ones to add?
 - Voting is done by a combination of paid members consisting of companies, institutions, and individuals – how do you feel about who has control and how they gained that control?
 - <https://home.unicode.org/membership/members/>

Group Work Time

- ❖ During this time, you are encouraged to work on the following:
 - 1) If desired, continue your discussion
 - 2) Work on the homework problems
 - 3) Work on the lab (if applicable)

- ❖ Resources:
 - You can revisit the lesson material
 - Work together in groups and help each other out
 - Course staff will circle around to provide support
