

The Hardware/Software Interface

CSE 351 Winter 2024

Instructor:
Justin Hsia

Teaching Assistants:

Adithi Raghavan
Aman Mohammed
Connie Chen
Eyoel Gebre
Jiawei Huang
Malak Zaki
Naama Amiel
Nathan Khuat
Nikolas McNamee
Pedro Amarante
Will Robertson

<http://xkcd.com/676/>

A detailed, colorful micrograph of a microchip die, showing a complex grid of circuitry and various colored regions (purple, blue, yellow, green, red) representing different functional blocks and interconnects.

Quarter Specifics

Course Staff

- ❖ Instructor: just call me Justin
 - CSE Associate Teaching Professor
 - Raising a toddler takes up energy and dictates my schedule

- ❖ TAs:

- ❖ More than anything, we want you to feel...
 - ✓ Comfortable and welcome in this space
 - ✓ Able to learn and succeed in this course
 - ✓ Comfortable reaching out if you need help or want change

Bookmarks

- ❖ Website: <https://courses.cs.washington.edu/courses/cse351/24wi/>
 - Schedule, policies, materials, tutorials, assignment specs, etc.
- ❖ Ed Course: <https://edstem.org/us/courses/50549/>
 - Discussion: announcements, ask and answer questions
 - Lessons: lessons, practice problems, homework
- ❖ Linked from website and Ed
 - Canvas: surveys, grade book, Zoom links
 - Gradescope: lab submissions, take-home exams
 - Panopto: lecture recordings

Grading

- ❖ **Lesson Problems: 6%** 
 - Can reveal solution after one attempt (completion)
 - ❖ **Homework: 20% total** 
 - Unlimited submission attempts (autograded correctness)
 - ❖ **Labs: 40% total** 
 - Last submission graded (correctness)
 - ❖ **Exams: Midterm (16%) and Final (16%)** 
 - Take-home; individual, but some discussion permitted
 - ❖ **EPA: Effort, Participation, and Altruism (2%)**
- groupwork allowed*
- partners allowed*
- individual work*

Support Hours

❖ Check Weekly Calendar on website for scheduled support hours:

- In-person or virtual, but NOT hybrid
- Zoom meeting links found in Zoom tab within Canvas

Weekly Calendar

Sep 26 – Oct 1, 2022

Compact Week List

Sun 9/25	Mon 9/26	Tue 9/27	Wed 9/28	Thu 9/29	Fri 9/30	Sat 10/1
	Summer Break		Rd01 Due	Section	HW0 Due	
			11:30a - 12:20p Lecture A	8a - 9a Office Hours TAB	Pre-Survey Due	
			12:30p - 1:20p Lecture B	3:30p - 4:30p Office Hours Clare & David	Rd02 Due	

❖ All support hours will use a Google Sheets queue:

- Fill out first 3 columns to enter queue:

Name(s)	Category	Description	Time Queued	Staff	Status
Example 1	Concept	Question about floating point encoding range.		Justin	Done
Example 2	Debugging	Lab 5: running into a segfault in mm_malloc after reaching end of the heap.		Justin	Done
Example 3	Spec	Lab 1a: confusion over within same block examples		Justin	Done
Example 4	Tools	GDB: how do I examine memory on the stack?		Justin	Done

❖ We encourage you to chat with other students if the TAs are busy!

In-Person Support Hours

- ❖ Allen 3rd & 4th floor breakouts
 - Up the stairs in the CSE Atrium (Allen Center, not Gates)
 - The open areas with the whiteboard walls are the breakouts!

Lecture Polls and Discussions

- ❖ Increase learning, test your understanding, increase student interactions, makes the class more engaging and fun
 - Lot of research supports its effectiveness:
- ❖ Polls on technical material will be multiple-choice and short answer
 - You haven't mastered the material yet; mistakes are part of the process!
- ❖ Discussion questions will be more open-ended
 - Be respectful of others' opinions and experiences
- ❖ Respond on Lecture Ed lesson for credit (extra late day tokens) and we will use *random call* to solicit live responses from audience
 - Don't need to be correct, just want the feedback of what was discussed

To-Do List

❖ Admin

- Explore/read the course website *thoroughly*, especially the syllabus
- Check that you can access Ed Discussion & Lessons
- ★ ■ **Get your machine set up to access the CSE Linux environment (attu or cancun) *as soon as possible***
- Optionally, sign up for CSE 391: System and Software Tools

❖ Assignments

- Pre-Course Survey and hw0 due Friday (1/5)
- HW1 and Lab 0 due Monday (1/8)
- Lessons quiz questions due 11:59 pm *after* the associated lecture

A detailed, colorful microchip die image showing intricate circuit patterns in shades of purple, blue, green, and yellow. The text is overlaid on this background.

Binary and Numerical Representation

Lesson Summary

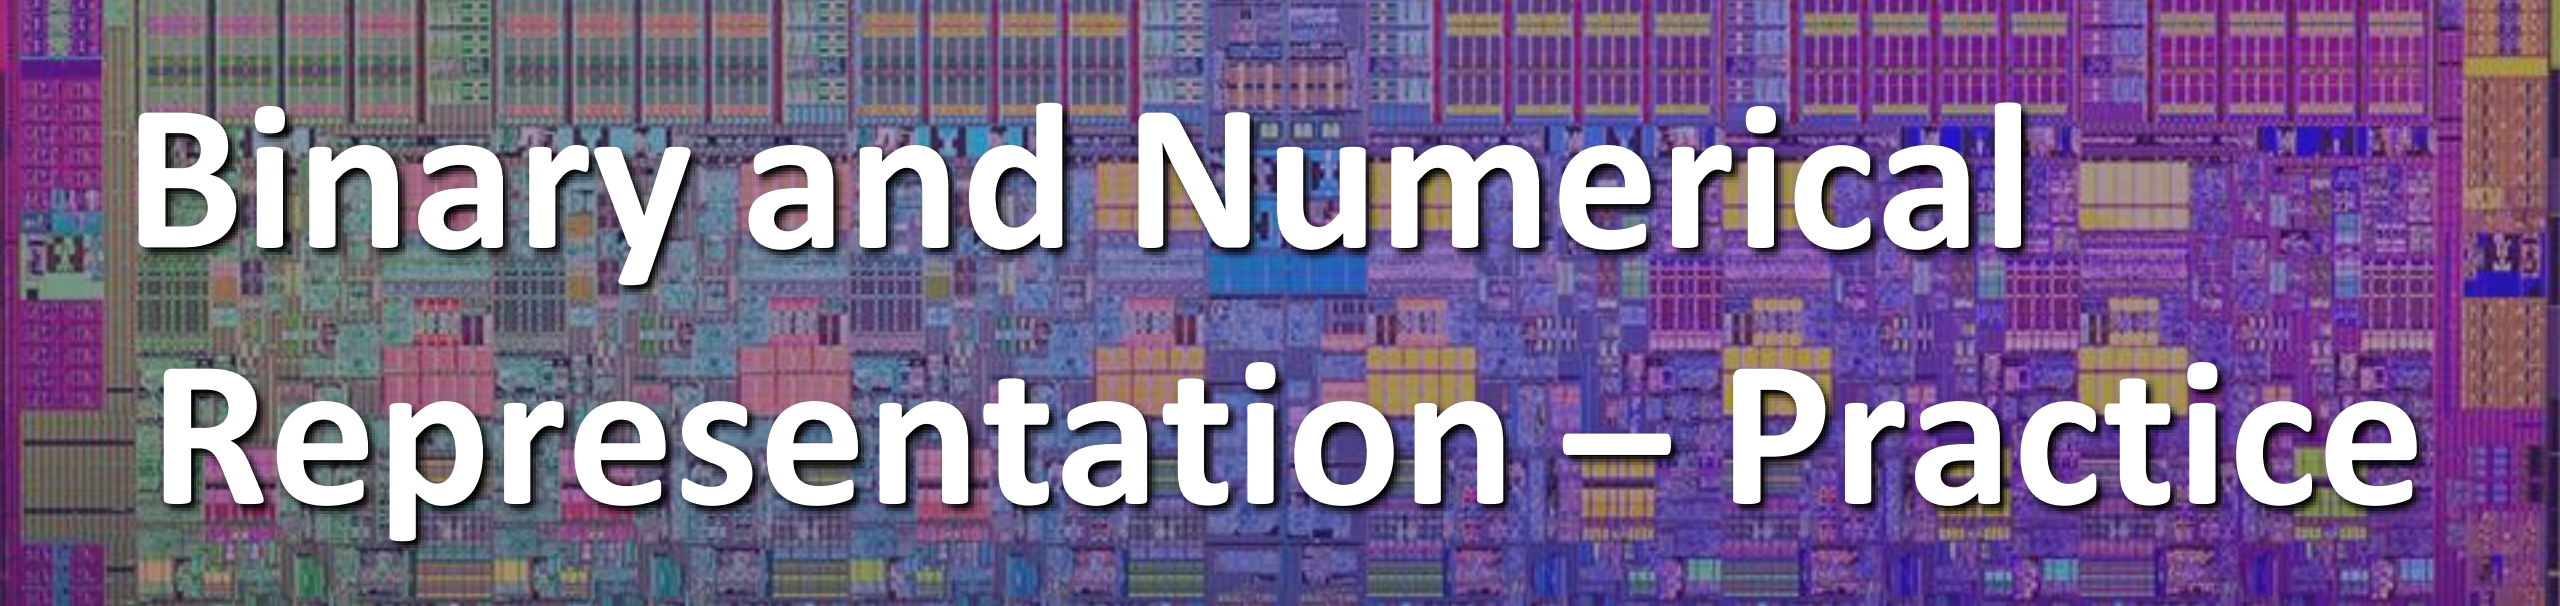

- ❖ Humans think about numbers in decimal; computers think about numbers in binary
 - Base conversion: digit d in position i in base b has a decimal value of $d \times b^i$
 - Changing bases does *not* change the value; just a different representation
 - Hexadecimal (base 16, prefix 0x) is more human-readable than binary (base 2, prefix 0b)
 - Unit of data in a computer is **1 byte = 8 bits = 2 hex digits**
- ❖ Binary encoding can represent *anything!*
 - Computer/program needs to know how to interpret the bits

Base 10	Base 2	Base 16
0	0b0000	0x0
1	0b0001	0x1
2	0b0010	0x2
3	0b0011	0x3
4	0b0100	0x4
5	0b0101	0x5
6	0b0110	0x6
7	0b0111	0x7
8	0b1000	0x8
9	0b1001	0x9
10	0b1010	0xA
11	0b1011	0xB
12	0b1100	0xC
13	0b1101	0xD
14	0b1110	0xE
15	0b1111	0xF

Lesson Q&A

- ❖ Learning Objectives:
 - Convert between binary, decimal, and hexadecimal number representations.
 - Given an encoding scheme, decode and encode binary to/from its intended representation.
 - Identify limitations of given encoding schemes.

- ❖ What lingering questions do you have from the lesson?
 - Introduce yourself to your neighbors and chat about the lesson for a few minutes to come up with questions

A detailed, colorful microchip die image serves as the background for the title. The die is densely packed with various colored regions (purple, blue, yellow, green, red) representing different functional blocks and interconnects.

Binary and Numerical Representation – Practice

Polling Questions

❖ What is the *decimal value* of the numeral 107_8 ?

position: $2^1 0$
 $1 \times 8^2 + 0 \times 8^1 + 7 \times 8^0$
 $64 + 0 + 7$
 $= 71$

- A. 71**
- B. 87
- C. 107
- D. 568

❖ Represent $0b100110110101101$ in hex.

$16 = 2^4$
 1 hex digit \leftrightarrow 4 bits

❖ What is the decimal number 108 in hex?

(base 16) · $16^0 = 1$
 $16^1 = 16$
 $16^2 = 256$

- A. 0x6C**
- B. 0xA8
- C. 0x108
- D. 0x612

$108 = 96 + 12$
 $= 6 \times 16^1 + 12 \times 16^0$
 $= 0x6C$

❖ Represent $0x3C9$ in binary.

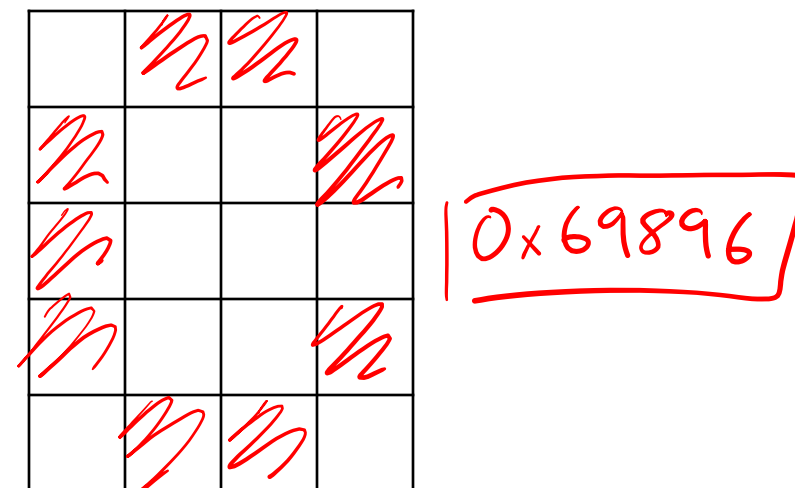

Homework Setup

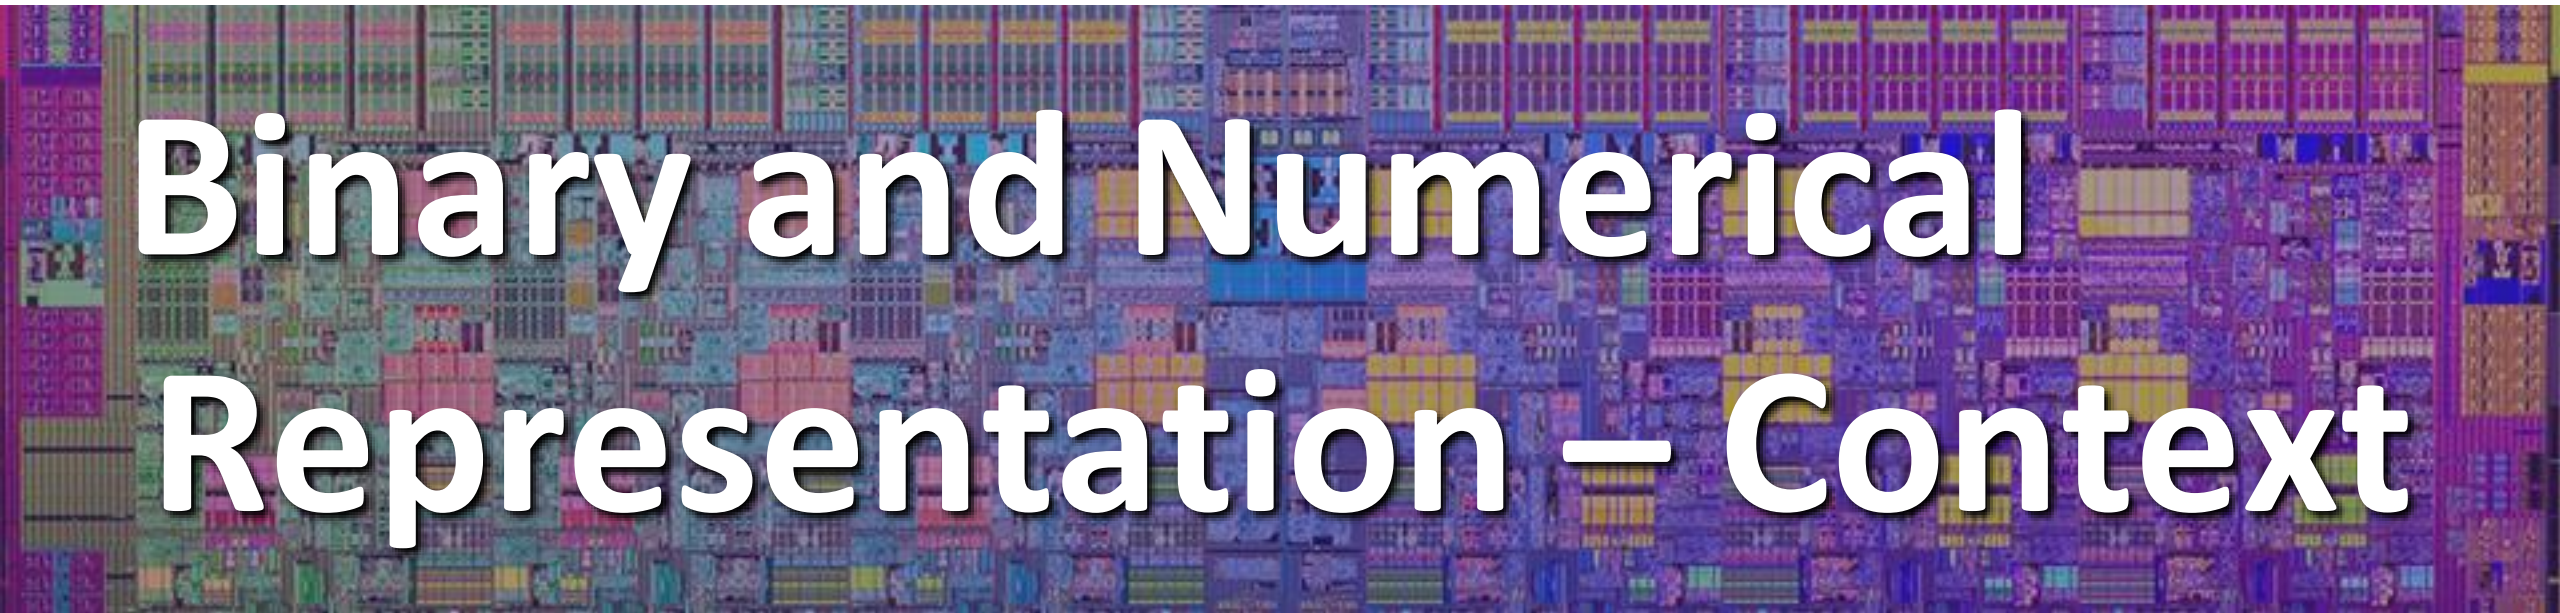

- ❖ Binary alphabet using five 4-bit numbers stacked on top of each other:

- ❖ What string of 5 hex digits represents a “C”?

other possibilities: 0xF888F
 0x78887
 0xE989E

A detailed, colorful microchip (die) is shown as a background for the title. The chip is a complex grid of various colored regions (purple, blue, yellow, green, red) representing different functional blocks and interconnects.

Binary and Numerical Representation – Context

Why Base 2?

❖ Electronic implementation

- Easy to store with bi-stable elements
- Reliably transmitted on noisy and inaccurate wires

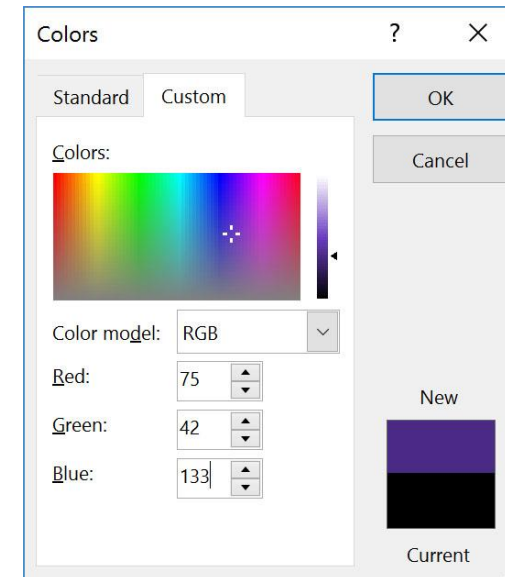

❖ Other bases possible, but not yet viable:

- DNA data storage (base 4: A, C, G, T) is hot @UW
- Quantum computing

Binary Encoding – Colors

- ❖ RGB – Red, Green, Blue
 - Additive color model (light): byte (8 bits) for each color
 - Commonly seen in hex (in HTML, photo editing, etc.)
 - Examples: **Blue**→0x0000FF, **Gold**→0xFFD700, **White**→0xFFFFFF, **Deep Pink**→0xFF1493

Binary Encoding – Characters/Text

- ❖ ASCII Encoding (www.asciitable.com)
 - American Standard Code for Information Interchange

Dec	Hx	Oct	Char	Dec	Hx	Oct	Html	Chr	Dec	Hx	Oct	Html	Chr	Dec	Hx	Oct	Html	Chr

What's Missing?

Binary Encoding – Characters/Text

- ❖ ASCII Encoding (www.asciitable.com)
 - *American* Standard Code for Information Interchange
- ❖ Created in 1963
 - Memory was expensive, 32KB in brand new machines
 - *Economic incentive* to use fewer bits for encoding
- ❖ **Design Goals:**
 - Represent everything on an *American* typewriter as *efficiently* as possible
 - Organize similar characters together
 - Numbers, uppercase, lowercase, then other stuff

Binary Encoding – Unicode & Emoji

- ❖ Unicode Standard is managed by the Unicode Consortium
 - “Universal language” that uses 1-4 bytes to represent a much larger range of characters/languages, including emoji
 - Adds new emojis every year, though adoption often lags: 🍷 (ninja)
 - <https://emojipedia.org/new/>
- ❖ Emojipedia demo: <http://www.emojipedia.org>
 - Taco: 🌮 (added 2015)
 - Code points: U+1F32E
 - Display (as of 2023):

Apple

Google
Android

Samsung

Windows
11

WhatsApp

Twitter

Facebook

Discussion Question

- ❖ Discuss the following question(s) in groups of 3-4 students
 - I will call on a few groups afterwards so please be prepared to share out
 - Be respectful of others' opinions and experiences

- ❖ The Unicode Consortium publicly solicits proposals from the public for new emoji to add to future standards
 - What do you think some of the decision factors are (or should be) in how many and which ones to add?
 - Voting is done by a combination of paid members consisting of companies, institutions, and individuals – how do you feel about who has control and how they gained that control?
 - <https://home.unicode.org/membership/members/>

Group Work Time

- ❖ During this time, you are encouraged to work on the following:
 - 1) If desired, continue your discussion
 - 2) Work on the homework problems
 - 3) Work on the lab (if applicable)

- ❖ Resources:
 - You can revisit the lesson material
 - Work together in groups and help each other out
 - Course staff will circle around to provide support
