Disjoint Union/Find - Lecture 17

Disjoint Union - Find

- Maintain a set of pairwise disjoint sets.
 - → {3,5,7} , {4,2,8}, {9}, {1,6}
- Each set has a unique name, one of its members
 - › {3,<u>5</u>,7} , {4,2,<u>8</u>}, {<u>9</u>}, {<u>1</u>,6}

11/22/02

Disjoint Union/Find - Lecture 17

Union

- Union(x,y) take the union of two sets named x and y
 - > {3,<u>5</u>,7}, {4,2,<u>8</u>}, {<u>9</u>}, {<u>1</u>,6}
 - > Union(5,1)

 $\{3,\underline{5},7,1,6\}, \{4,2,\underline{8}\}, \{\underline{9}\},$

11/22/02

Disjoint Union/Find - Lecture 17

Find

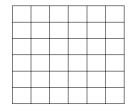

- Find(x) return the name of the set containing x.
 - $\ \ \, \} \ \, \{3,\!\underline{5},\!7,\!1,\!6\}, \, \{4,\!2,\!\underline{8}\}, \, \{\underline{9}\}, \,$
 - \rightarrow Find(1) = 5
 - \rightarrow Find(4) = 8

11/22/02

Disjoint Union/Find - Lecture 17

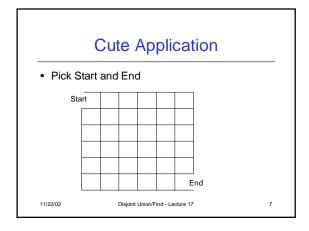

Cute Application

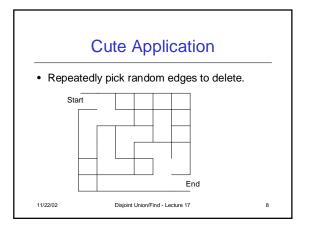

• Build a random maze by erasing edges.

11/22/02

Disjoint Union/Find - Lecture 17

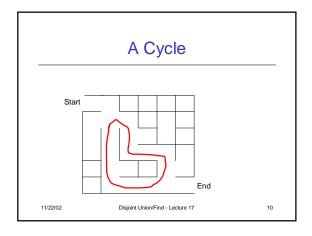

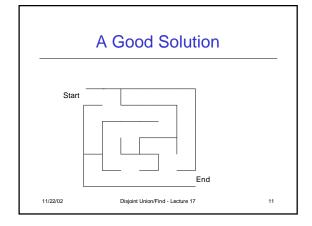

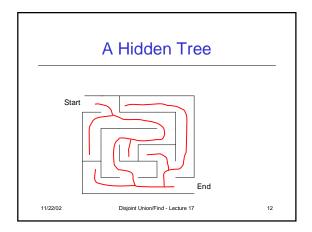

Desired Properties

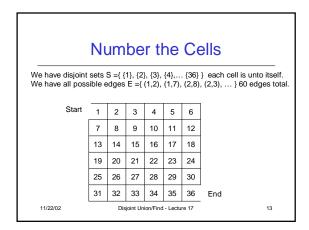

- None of the boundary is deleted
- Every cell is reachable from every other cell
- There are no cycles no cell can reach itself by a path unless it retraces some part of the path.

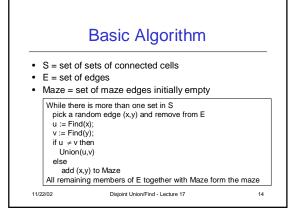

11/22/02 Disjoint Union/Find - Lecture 17

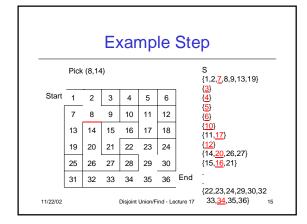

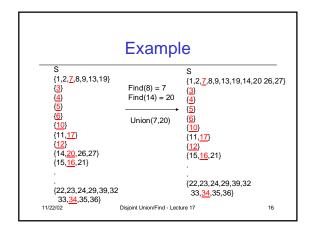

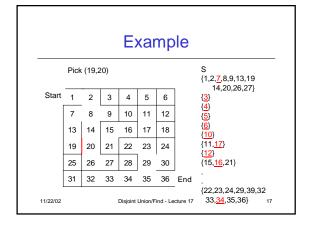

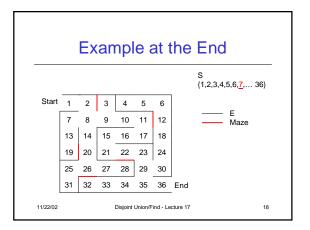

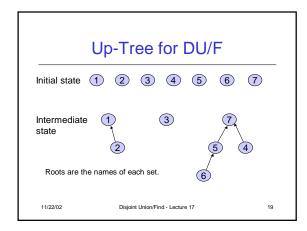

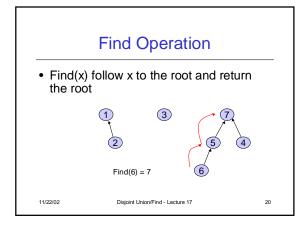

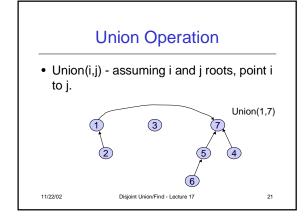

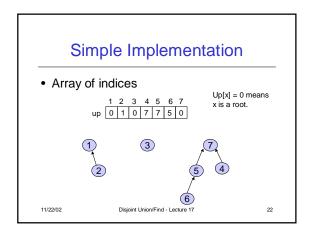

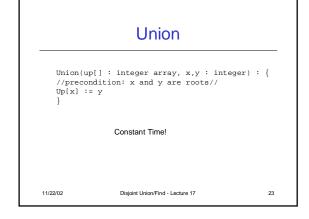

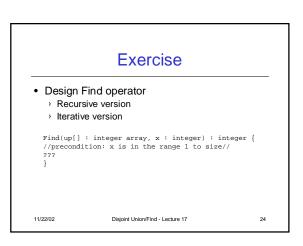

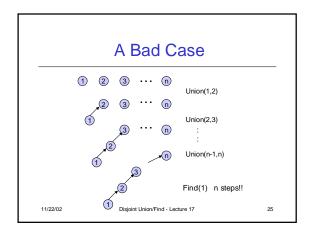

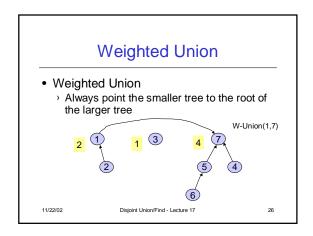

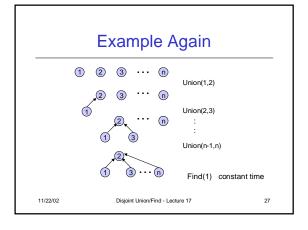

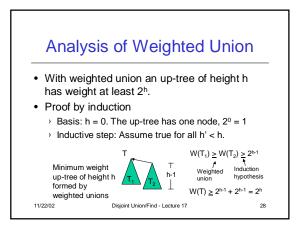

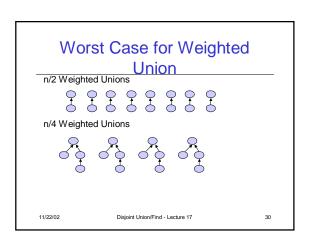

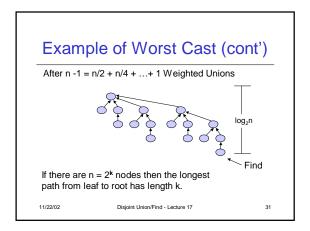

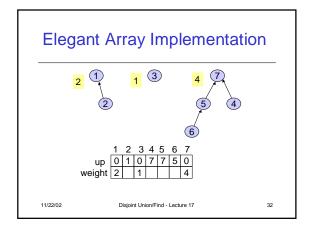

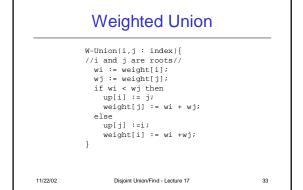

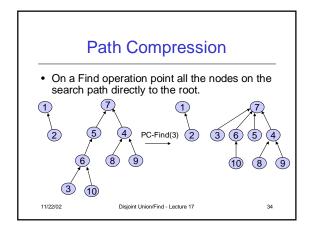

Analysis of Weighted Union Let T be an up-tree of weight n formed by weighted union. Let h be its height. n ≥ 2h log₂ n ≥ h Find(x) in tree T takes O(log n) time. Can we do better?

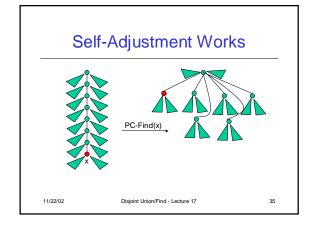

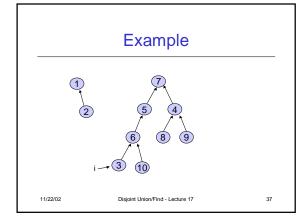

Path Compression Find PC-Find(i : index) { r := i; while up[r] ≠ 0 do //find root// r := up[r]; if i ≠ r then //compress path// k := up[i]; while k ≠ r do up[i] := r; i := k; k := up[k] return(r) } 11/22/02 Disjoint Union/Find - Lecture 17 36

Disjoint Union / Find with Weighted Union and PC

- Worst case time complexity for a W-Union is O(1) and for a PC-Find is O(log n).
- Time complexity for m ≥ n operations on n elements is O(m log* n) where log* n is a very slow growing function.
 - Log * n < 7 for all reasonable n. Essentially constant time per operation!
- Using "ranked union" gives an even better bound theoretically.

22/02 Disjoint Union/Find - Lecture 17

Amortized Complexity

- For disjoint union / find with weighted union and path compression.
 - average time per operation is essentially a constant.
 - worst case time for a PC-Find is O(log n).
- An individual operation can be costly, but over time the average cost per operation is not.

11/22/02 Disjoint Union/Find - Lecture 17

Find Solutions

```
Recursive
Find(up[] : integer array, x : integer) : integer {
   //precondition: x is in the range 1 to size//
   if up[x] = 0 then return x
   else return Find(up,up[x]);
}

Iterative
Find(up[] : integer array, x : integer) : integer {
   //precondition: x is in the range 1 to size//
   while up[x] # 0 do
    x := up[x];
   return x;
}
