#### Introduction

CSE 373
Data Structures & Algorithms
Ruth Anderson
Spring 2009

#### Staff

- Instructor
  - > Ruth Anderson, rea@cs.washington.edu
- TA's
  - > Shih-Yen Liu, sysliu@cs.washington.edu
  - > Robert McClure rmcclur@cs.washington.edu
  - > Matt Mullen mjollnir@cs.washington.edu

3/30/2009 CSE 373 09sp - Introduction

### MIVERSITY VIRGINIA

# Me (Ruth Anderson)

- Grad Student at UW (Programming Languages, Compilers, Parallel Computing)
- Taught Computer Science at the University of Virginia for 5 years
- Grad Student at UW (Educational Technology, Pen Computing)
- · Defended my PhD in fall 2006
- · Computing and the Developing World
- Last year taught compilers, programming languages, data structures, architecture

3/30/2009 CSE 373 09sp - Introduction

# Web Page

- All info is on the web page for CSE 373
  - > http://www.cs.washington.edu/373
  - › also known as
    - $\bullet \ \, \text{http://www.cs.washington.edu/education/courses/373/09sp}$
- Look there for schedules, contact information, assignments, links to discussion boards and mailing lists, etc.

3/30/2009

CSE 373 09sp - Introduction

#### Office Hours

- Ruth Anderson

   360 CSE (Allen Center)
  - M 11:30-12:30pm, W 2:30-3:30pm or by appointment
- Shih-Yen Liu 220 CSE
  - > T & Th 11am-12pm
- Robert McClure to be announced
- Matt Mullen to be announced

3/30/2009

CSE 373 09sp - Introduction

#### CSE 373 E-mail List

- If you are registered for the course, you will be automatically subscribed.
- The E-mail list is used for posting announcements by instructor and TAs.
- You are responsible for anything sent here

3/30/2009

CSE 373 09sp - Introduction

#### CSE 373 Discussion Board

- The course will have a Catalyst Go-Post message board
- Use
  - > General discussion of class contents
  - Hints and ideas about assignments (but not detailed code or solutions)
  - > Other topics related to the course.

3/30/2009

CSE 373 09sp - Introduction

# Computer Lab for homework and Help sessions

- College of Arts & Sciences Instructional Computing Lab
  - http://depts.washington.edu/aslab/
- We'll be using Java for the programming assignments.

3/30/200

CSE 373 09sp - Introduction

#### Software Platform

- Java 6
- Eclipse 3.4
  - Powerful integrated development environment (IDE)
  - Free download from www.eclipse.org

Using one tool as a class will make it easier to get help when needed.

3/30/2009

CSE 373 09sp - Introduction

#### **Textbook**

 Data Structures and Algorithm Analysis in Java, by Mark Allen Weiss, 2<sup>nd</sup> edition, Addison-Wesley, 2007.

3/30/2009

CSE 373 09sp - Introduction

# Grading

#### Estimated Breakdown:

- Assignments 50%
  - Weights may differ to account for relative difficulty of assignments
  - Assignments will be a mix of shorter written exercises and longer programming projects
- Midterms 30% (Two, 15% each)
- Final Exam 20%
  - › 2:30-4:20pm Wednesday, June 10, 2009.

3/30/2009

CSE 373 09sp - Introduction

## **Deadlines & Late Policy**

- Assignments generally due Thursday evenings via the web
  - Exact times and dates will be given for each assignment
- Late policy: 25% off per 24hrs late
  - Note: ALL parts of the assignment must be received by that time (may require you to make an electronic version of written assignments).

(Talk to the instructor if something truly outside your control causes problems here)

3/30/2009

CSE 373 09sp - Introduction

12

# Academic (Mis-)Conduct

- You are expected to do your own work
   Exceptions (group work), if any, will be clearly announced
- Sharing solutions, doing work for or accepting work from others will be penalized
- Referring to solutions from this or other courses from previous quarters is cheating.
- Integrity is a fundamental principle in the academic world (and elsewhere) – we and your classmates trust you; don't abuse that trust

3/30/2009

CSE 373 09sp - Introduction

# Policy on collaboration

- "Gilligan's Island" rule:
  - You may discuss problems with your classmates to your heart's content.
  - After you have solved a problem, discard all written notes about the solution.
  - Go watch TV for a ½ hour (or more). Preferably *Gilligan*'s *Island*.
  - > Then write your solution.

3/30/2009

CSE 373 09sp - Introduction

### Homework for Today!!

- 0) Review Java & Explore Eclipse
- 1) Assignment #1: (posted soon)
- 2) Preliminary Survey: fill out by evening of Tuesday March 31st
- Information Sheet: bring to lecture on Wednesday April 1<sup>st</sup> (really!)
- 4) Reading in Weiss (see next slide)

3/30/2009

CSE 373 09sp - Introduction

Reading

- Reading in Data Structures and Algorithm Analysis in Java, by Weiss
- · For this week:
  - Chapter 1 (review) Mathematics and Java
  - Chapter 3 (Assign #1) Lists, Stacks, & Queues
  - Chapter 2 (Topic for Wednesday) Algorithm Analysis

3/30/2009

CSE 373 09sp - Introduction

# Bring to Class on Wednesday:

- Name
- Email address
- Year (1,2,3,4)
- Major
- Hometown
- Interesting Fact or what I did over summer/break.

CSE 373 09sp - Introduction

15

#### **Class Overview**

- Introduction to many of the basic data structures used in computer software
  - > Understand the data structures
  - › Analyze the algorithms that use them
  - Know when to apply them
- Practice design and analysis of data structures.
- Practice using these data structures by writing programs.
- Data structures are the plumbing and wiring of programs.

3/30/2009

CSE 373 09sp - Introduction

3

#### Goal

- · You will understand
  - what the tools are for storing and processing common data types
  - > which tools are appropriate for which need
- So that you will be able to
  - make good design choices as a developer, project manager, or system customer

3/30/2009

CSE 373 09sp - Introduction

# Data Structures

"Clever" ways to organize information in order to enable efficient computation.

3/30/2009

CSE 373 09sp - Introduction

# **Course Topics**

- Introduction to Algorithm Analysis
- · Lists, Stacks, Queues
- · Search Algorithms and Trees
- · Hashing and Heaps, Dictionaries
- Sorting
- · Disjoint Sets
- · Graph Algorithms

3/30/2009

CSE 373 09sp - Introduction

# **Background**

- Prerequisite is CSE 143
- Topics you should have a basic understanding of:
  - Variables, conditionals, loops, methods (functions), fundamentals of defining classes and inheritance, arrays, single linked lists, simple binary trees, recursion, some sorting and searching algorithms, basic algorithm analysis (e.g., O(n) vs O(n²) and similar things)
- We can fill in gaps as needed, but if any topics are new, plan on some extra studying

3/30/2009

CSE 373 09sp - Introduction

Data Structures: Why?

- Need to organize program data according to problem being solved
- Abstract Data Type (ADT) A data object and a set of operations for manipulating it

Data Structures: What?

- › List ADT with operations insert and delete
- > Stack ADT with operations push and pop
- · Note similarity to Java classes
  - > private data structure and public methods

3/30/2009

CSE 373 09sp - Introduction

 Program design depends crucially on how data is structured for use by the program

- > Implementation of some operations may become easier or harder
- Speed of program may dramatically decrease or increase
- › Memory used may increase or decrease
- > Debugging may be become easier or harder

3/30/2009

23

CSE 373 09sp - Introduction

1

24

# Picking the best Data Structure for the job

- The data structure you pick needs to *support* the operations you need
- Ideally it supports the operations you will use most often in an *efficient* manner
- Examples of operations:
  - > List ADT with operations insert and delete
  - > Stack ADT with operations push and pop

3/30/2009

CSE 373 09sp - Introduction

25

# **Terminology**

- Abstract Data Type (ADT)
  - Mathematical description of an object with set of operations on the object. Useful building block.
- Algorithm
  - A high level, language independent, description of a step-by-step process
- Data structure
  - A specific organization of data and family of algorithms for implementing an abstract data type.
- · Implementation of data structure
  - A specific implementation in a specific language

30/2009 CSE 373 09sp - Introduction

26

28

## Terminology examples

- A stack is an abstract data type supporting push, pop and isEmpty operations
- A stack data structure could use an array, a linked list, or anything that can hold data
- One stack *implementation* is found in java.util.Stack

3/30/2009

CSE 373 09sp - Introduction

# Algorithm Analysis: Why?

- Correctness:
  - > Does the algorithm do what is intended?
- Performance:
  - > What is the running time of the algorithm?
  - > How much storage does it consume?
- Different algorithms may correctly solve a given task
  - > Which should I use?

3/30/2009

CSE 373 09sp - Introduction

# Iterative Algorithm for Sum

 Find the sum of the first num integers stored in an array v.

### Programming via Recursion

 Write a recursive function to find the sum of the first num integers stored in array v.

```
sum (v[]: integer array, num: integer): integer {
   if num = 0 then
        return 0
   else
        return v[num-1] + sum(v,num-1);
}
```

#### Pseudocode

- In the lectures algorithms will often be presented in pseudocode.
  - > This is very common in the computer science literature
  - > Pseudocode is usually easily translated to real code.
  - > This is programming language independent

CSE 373 09sp - Introduction

# **Proof by Induction**

- Basis Step: The algorithm is correct for the base case (e.g. n=0) by inspection.
- Inductive Hypothesis (n=k): Assume that the algorithm works correctly for the first k cases, for any k.
- Inductive Step (n=k+1): Given the hypothesis above, show that the k+1 case will be calculated correctly.

31

33

CSE 373 09sp - Introduction

# **Program Correctness by Induction**

- **Basis Step:** sum(v,0) = 0. ✓
- Inductive Hypothesis (n=k): Assume sum(v,k) correctly returns sum of first k elements of v, i.e. v[0]+v[1]+...+v[k-1]
- Inductive Step (n=k+1): sum(v,n) returns v[k]+sum(v,k) which is the sum of first k+1 elements of v. ✓

3/30/2009

CSE 373 09sp - Introduction

# Algorithms vs Programs

- · Proving correctness of an algorithm is very important
  - ) a well designed algorithm is guaranteed to work correctly and its performance can be estimated
- Proving correctness of a program (an implementation) is fraught with weird bugs
  - Abstract Data Types are a way to bridge the gap between mathematical algorithms and programs

3/30/2009

CSE 373 09sp - Introduction

# First Example: Queue ADT

 Queue operations create

destroy enqueue dequeue is\_empty

dequeue A G enqueue FEDCB

3/30/2009 CSE 373 09sp - Introduction

# Circular Array Queue **Data Structure**

enqueue(Object x) { How test for empty list? Q[back] = x ;How to find K-th back = (back + 1) % size element in the queue? dequeue() { What is complexity of x = Q[front]; these operations? front = (front + 1) % size; Limitations of this return x ; structure? 3/30/2009 CSE 373 09sp - Introduction

#### Linked List Queue **Data Structure** void enqueue(Object x) { Object dequeue() { if (is\_empty()) assert(!is\_empty) front = back = new Node(x) return\_data = front->data temp = front back->next = new Node(x) front = front->next back = back->next delete temp return return\_data bool is\_empty() { return front == null CSE 373 09sp - Introduction 37

# Circular Array vs. Linked List

3/30/2009 CSE 373 09sp - Introduction 3i

#### Second Example: Stack ADT •EDCBA Stack operations В › create C destroy D > push Е F ) pop > top is\_empty CSE 373 09sp - Introduction 3/30/2009

#### Stacks in Practice

- · Function call stack
- · Removing recursion
- Balancing symbols (parentheses)
- Evaluating Reverse Polish Notation

3/30/2009 CSE 373 09sp - Introduction 40

# Homework for Today!!

- 0) Review Java & Explore Eclipse
- 1) Assignment #1: (posted soon)
- **2) Preliminary Survey**: fill out by evening of Tuesday March 31<sup>st</sup>
- **3) Information Sheet**: bring to lecture on Wednesday April 1<sup>st</sup> (really!)
- 4) Reading in Weiss (see next slide)
