

University of Washington

Computer Science & Engineering 373: Data Structures and Algorithms

Course Syllabus, Spring 2011

Instructor

Jessica Miller

jessica@cs.washington.edu

Office: CSE 214

Phone: (206) 616-6027

See course website for office hours.

Course Overview

This course is about fundamental data structures and algorithms. In this course, you will:

- Learn about fundamental data structures (including lists, stacks, queues, trees, sets, maps, heaps, and graphs)
- Learn about searching and sorting algorithms
- Gain an understanding of the concept of an abstract data type (ADT) and the tradeoffs between different implementations of ADTs
- Gain an understanding of which data structures are most effective for various scenarios and problems
- Become proficient with analyzing the running time of various algorithms associated with data structures
- Implement several data structures in detail
- Gain familiarity with memory hierarchy and B-trees

Prerequisite

CSE143

Lecture Time

MWF 2:30 PM - 3:20 PM, MGH 241

Course Web Site

<http://www.cs.washington.edu/373/>

All resources from class will be posted here. Check the web site daily for important announcements.

Textbook

Weiss, Mark Allen. *Data Structures and Algorithm Analysis in Java 2nd Ed.*, Addison Wesley: 2007, ISBN: 0-321-37013-9

The textbook is required as readings will be assigned from it and homework problems will occasionally be assigned from it. The lectures do not provide enough time to cover all material, so you are expected to read the textbook to supplement lectures and clarify concepts. Also, the exams in this course will be open-book, so it may be advantageous to own the book to bring as a reference during exams.

Computer Access and Software

We will use Java 1.6 for programming assignments. We recommend (but do not require) that you use the Eclipse development environment. The College of Arts & Sciences Instructional Computing Lab (rooms B022 and B027 in the Communications Building) is the computer lab for this course; the above software should be installed there as well as in other public campus labs. Links for downloading and installing Java and Eclipse can be found on our course web page.

Grading

- 50% assignments (written exercises and programming projects)
- 20% midterm (**Friday, May 6, 2011, in class**)
- 30% final exam (**Tuesday, June 7, 2011, 2:30 - 4:20 PM, MGH 241**)

This maps to the 4.0 scale roughly as follows. You will get at least the grade below for the percentage shown.

90%: at least 3.5

80%: at least 2.5

70%: at least 1.5

60%: at least 0.7

Exams

Our exams are open-book, but closed-notes. No electronic devices may be used, including calculators.

Make-up exams will not be given except in case of a serious emergency. If you must miss an exam, even if you are sick or injured, you must contact the instructor *before* the exam (or arrange for someone to do so). You must show evidence that you are physically unable to take the exam, such as a clear and specific doctor's note mentioning the date, exam, and reason. No make-ups will be granted for personal reasons such as travel, personal hardship, leisure, or to ease exam week schedules. No student will be permitted to take an exam early for any reason.

Assignments

Assignments will be a mix of written exercises and programming projects. Written exercises will be due at the beginning of class the date the assignment is due. Programming assignments will be submitted electronically from the course web site. Programming assignments will be graded on "external correctness" (behavior) and "internal correctness" (style and design). Disputes about homework grading must be made within 2 weeks of receiving the grade.

Lateness

For full credit, written assignments must be turned in on paper **at the start of** lecture on the day it is due. You may turn in written assignments up to the start of the following lecture for a 20% deduction (i.e. 80% credit). Written assignments **will not be accepted** any later than the start of the lecture following the lecture the assignment was due. This policy includes written portions of programming assignments. Only in extenuating circumstances (e.g. sick, snow day) may you turn in a written assignment electronically (through email).

All programming assignments are due electronically by 10 PM. Refer to the course calendar for due dates. Each student in the class will have a total of **three "late days"** (a late day is 24 hours of lateness). There are no partial days, so assignments are either on time, 1 day late, 2 days late. Regardless of how many late days you have, **you may not submit a program more than 2 days after it is due**. Once a student has used up all of his or her late days, each successive late day will result in a loss of 10% on the assignment.

All assignments must be submitted by 10 PM, Sunday, June 5, 2011, whether or not a student has free late days left.

Academic Integrity and Collaboration

All assignments must be completed individually; all code and written exercise solutions you submit must be your own work. You may discuss general ideas of how to approach an assignment, but never specific details about the code or solution to write. Any help you receive from or provide to classmates should be limited and should never involve details of how to code a solution or specifically how to answer a question. You must abide by the following rules:

- You may not work as a partner with another student on an assignment.
- You may not show another student your solution to an assignment, nor look at his/her solution, for any reason.
- You may not have another person "walk you through" an assignment, describe in detail how to solve it, or sit with you as you write it. You also may not provide such help to another student. This includes current or former students, tutors, friends, TAs, paid consultants, people on the Internet, or anyone else.
- You may not post your homework solutions online to ask others for help. This includes public message boards, forums, file sharing sites and services, or any other online system.

Under our policy, a student who gives inappropriate help is equally guilty with one who receives it. Instead of providing such help to someone who does not understand an assignment, point them to other class resources such as lecture examples, the textbook, office hours, or emailing a TA or instructor. You must not share your solution with others. You must also ensure that your work is not copied by others, such as making sure to log out of shared computers, not leaving print-outs of your code in public places, and not emailing your code to other students or posting it on the web.

If you are retaking the course, you may resubmit a previous solution unless that program was involved in an academic misconduct case. If misconduct was found, you must write a new version of that program.

We enforce this policy vigorously by running similarity detection software a few times per quarter over all submitted student programs, including programs from past quarters. Students who violate the policy are offered reduced scores and sometimes sent to a University committee. This can lead to marks on permanent academic records. Please be careful, and contact the instructor if you are unsure whether a particular behavior falls within our policy.
