

CSE 378  
Machine Organization  
and Assembly Language Programming

Winter 2004

John Zahorjan  
Steven Balensiefer  
Vadim Lobanov

Intro To Architecture Via  
a Bit of Computer History

ENIAC: 1946

Cost to build: \$486,804.22  
17,468 vacuum tubes, 5,000 additions/second (5 Kips)  
30 feet x 50 feet, 30 tons  
Cost to operate (electricity): \$650/hr. (idling)

ENIAC Programming

IBM S360/67: 1967

Cost: \$3,000,000  
1,000,000 instructions/sec. (1 Mip)  
512KB "core" memory (\$1,000,000/MB)  
352MB disk

VAX 11/780: circa 1980

Cost: \$150,000  
1 "VAX Mip"  
1MB Ram

### Xerox Alto: 1973

Cost: \$32,000 (research)

1 Mip  
Bitmap display  
Mouse  
"Microsoft Word"

### Intel 8086 (x86): 1978

Cost: ~\$350  
5-10 MHz (~1Mip)  
29,000 transistors

### Microprocessors + Workstation Concept

8/12/1981 IBM introduces its Personal Computer, which uses Microsoft's 16-bit operating system, Microsoft® MS-DOS® version 1.0, plus Microsoft BASIC, Microsoft COBOL, Microsoft Pascal, and other Microsoft products.

1984: Original Mac  
Cost: \$3,500  
8 MHz  
64KB RAM  
No disk (400KB floppy)

### Pentium 4: 2000's

Cost: \$100's  
2 GHz  
42,000,000 transistors

### Moore's Law: 1975

### One Way to View Architecture as a Topic

What are we going to do with all those transistors?

or

How can we make *programs* run faster at the rate processor speeds are improving?

## Course Overview

## What is "Computer Architecture"?

Computer Architecture =

- Instruction Set Architecture +
- Machine Organization + ...

## The Instruction Set: a Critical Interface

## What is "Computer Architecture"?

- § Coordination of many levels of abstraction
- § Under a rapidly changing set of forces
- § Design, Measurement, and Evaluation

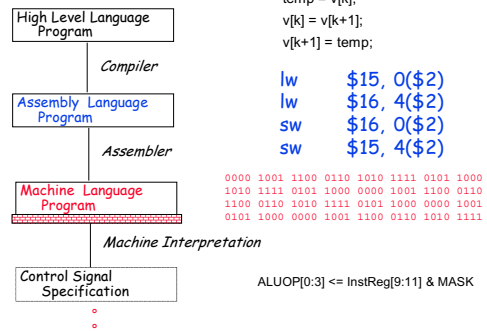

## Instruction Set Architecture (subset of Computer Architecture)

"... the attributes of a [computing] system as seen by the programmer, *i.e.*, the conceptual structure and functional behavior, as distinct from the organization of the data flows and controls the logic design, and the physical implementation."  
- Amdahl, Blaaw, and Brooks, 1964

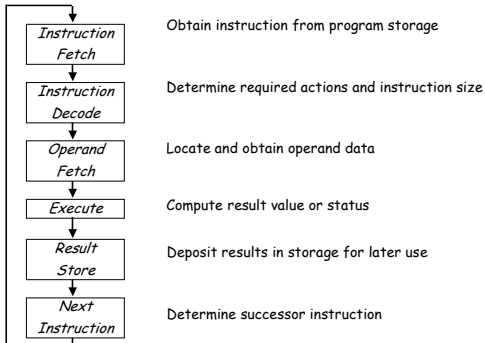

- Organization of Programmable Storage
- Data Types & Data Structures: Encodings & Representations
- Instruction Set
- Instruction Formats
- Modes of Addressing and Accessing Data Items and Instructions
- Exceptional Conditions

## Levels of Representation

## Execution Cycle

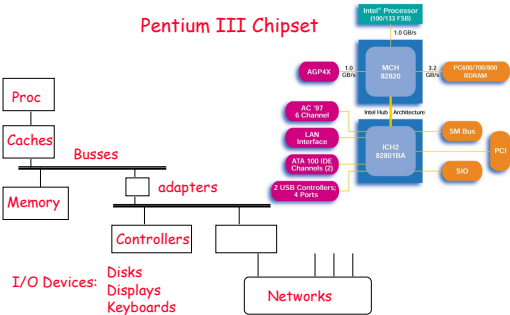

## Machine Organization

§ Since 1946 all computers have had 5 components

## A Machine (is not just a CPU)

## Where are We Going??
