## Overall Description

### **Description**

CourseForge is a web-based system for UW students which will greatly improve the UW course registration experience. At its core, CourseForge provides an easy visual way of planning schedules. It will provide numerous conveniences that the current system does not. At present, students are required to search through a maze of confusing and disjointed pages to gather all available registration information, and they can easily miss something which would have an impact on their decision to take/not take a course. Our system will combine the intuitiveness of a visual schedule with features that put schedule control at the student's fingertips, such as detailed course info and rankings, comprehensive course searching, comparing multiple schedules using tabs and "ghosting", and more into one easy, fluid, comprehensive system that makes registration research simple.

### **Scope**

CourseForge is specialized for creating and comparing course schedules. It is not meant to be used as a replacement for web-based calendar applications such as Google Calendar. CourseForge will save a user's schedules for use over multiple sessions, but it will not have certain calendaring features like viewing more than one week (since classes always repeat every week), or creating your own activities (other than marking blocks of time as busy). Additionally, CourseForge is not a long-term academic planner for mapping out a student's entire college career. CourseForge will only plan for the current academic quarter.

CourseForge will need to be able to read or scrape UW's existing course schedule database in order to get current course information. It will also depend on its own SQL database for storing course info, and information for each user like the schedules that they've saved. CourseForge will also depend on LAMP (Linux, Apache, MySQL, [Perl, PHP, or Python]) for getting user input in the web browser, communicating with the server, and displaying the results in the web browser.

# Use Cases

Goal	Once a client submits a search query to the interface, a course list should be populated and presented to them.
Level	Sub-function
Primary Actor	UW Student
Precondition	Client is already logged into the registration system.
Success end condition	A course list is populated for the client.
Failure end condition	A course list is not populated for the client.
Trigger	Registration time rolls around at UW.
Main success scenario	<ol style="list-style-type: none"> <li>1. Client inputs information into a search field category(s).</li> <li>2. Client submits their query by clicking a confirmation button.</li> <li>3. System queries database using client's input.</li> <li>4. System returns a list of courses to the interface.</li> </ol>
Extensions	<ol style="list-style-type: none"> <li>1a. No information is entered by client. <ol style="list-style-type: none"> <li>1a1. System displays an error dialogue.</li> </ol> </li> <li>2a. The client has no internet connectivity when they submit. <ol style="list-style-type: none"> <li>2a1. System does nothing and normal web browser behavior ensues.</li> </ol> </li> <li>3a. System cannot resolve the user's input after querying database. <ol style="list-style-type: none"> <li>3a1. System displays 'no courses found' in the list results.</li> </ol> </li> <li>3b. System finds user's input, but the class is not offered currently. <ol style="list-style-type: none"> <li>3b1. System displays 'course not offered during current quarter'.</li> </ol> </li> </ol>
Variations	<ol style="list-style-type: none"> <li>1-2'. Client submits a DARS instead of search.</li> <li>1-2''. System parses DARS and populates course list.</li> </ol>

Goal	To add a course to the schedule pane and to lock it.
Level	Sub-function
Primary Actor	UW Student
Precondition	Client is logged in and the course list is populated.
Success end condition	A course is locked in the schedule pane.
Failure end condition	A course is not locked in the schedule pane.
Trigger	The course list pane is populated after a search query is performed.
Main success scenario	<ol style="list-style-type: none"> <li>1. Client drags and drops a course from the course list pane to the schedule pane.</li> <li>2. System generates “ghosted” boxes everywhere the course is scheduled to meet for class during the week.</li> <li>3. Client left-clicks on the “ghosted” course in the schedule pane.</li> <li>4. System locks the course the client clicked on.</li> </ol>
Extensions	<ol style="list-style-type: none"> <li>1a. Client drags and drops the same course again. <ol style="list-style-type: none"> <li>1a1. System does nothing.</li> </ol> </li> <li>3a. Client attempts to lock a ghosted course, but there is a conflict with another locked course. <ol style="list-style-type: none"> <li>3a1. System displays warning stating the course could not be locked because of a course conflict.</li> </ol> </li> </ol>
Variations	

## Feature List

<b>Feature</b>	<b>Target</b>
Visual schedule pane with ghosting/locking	Alpha
Ability to add classes to schedule pane from list pane	Alpha
Search for courses by keyword	Alpha
Search for courses by specified time intervals	Alpha
Usable database with schema and data	Alpha
Course information pop-ups for class blocks	Beta
UW course directory scraper	Beta
UW professor info scraper	Beta
Authentication via login module	Beta
Search for courses by credit type	Beta
Search for courses by course level	Beta
Search for courses by number of credits	Beta
Build multiple schedules via tabbing	Final
Ability to save current schedule configuration on server	Final
List pane organizer	Final
Addable custom blocks to visual schedule	Final
Add code functionality	Final
Auto-register	Final
Populate course list via DARS/Transcript parsing	Stretch
View course routes via mapping	Stretch
Export schedule to local drive for external viewing	Stretch
Alternate schedule visualization	Stretch

# UI Prototype

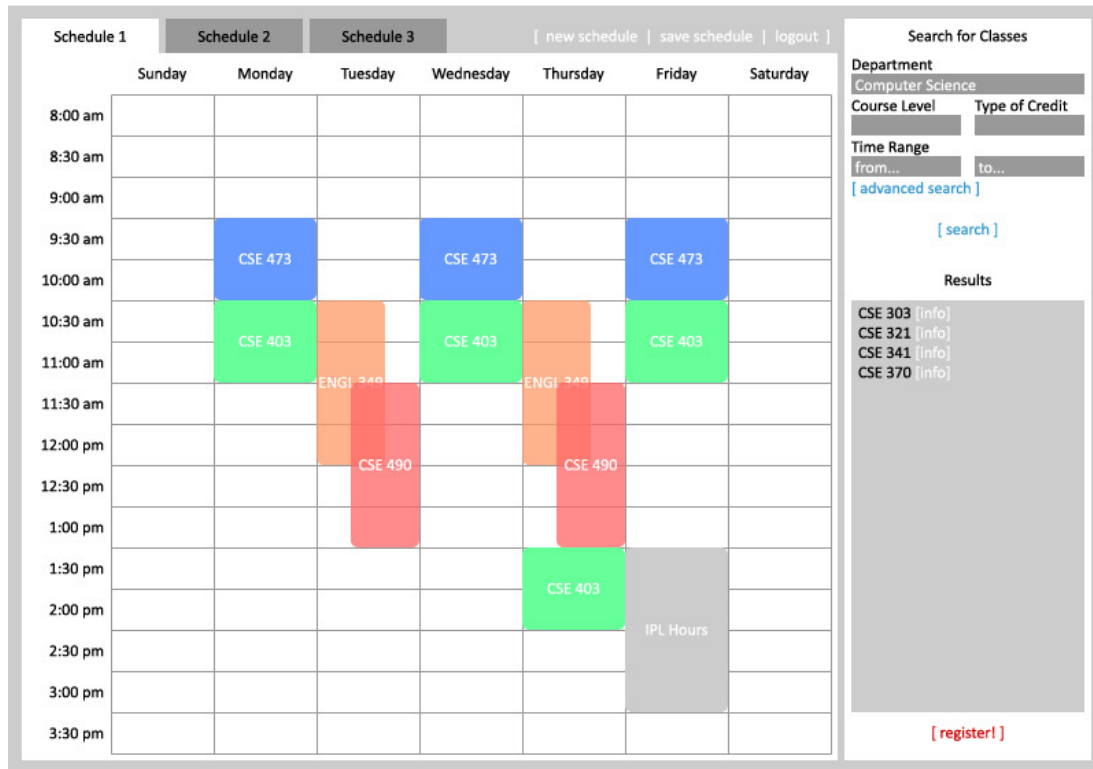

Fig. 1: Main page. The visual schedule pane on the left is already populated by a potential schedule with “ghosted” classes (red and orange), locked classes (blue, green), and a custom commitment block (gray). “Ghosted” classes can overlap. Tabs at the top of the schedule pane indicate alternate schedule options.

The list pane on the right contains search fields, search button, and course list. The register button below the list pane is available when the student is ready to register for their schedule.

# UI Prototype

The screenshot shows a web interface for a class schedule. At the top, there are tabs for 'Schedule 1', 'Schedule 2', and 'Schedule 3', along with links for 'new schedule', 'save schedule', and 'logout'. Below the tabs is a grid representing the schedule, with columns for days of the week (Sunday to Saturday) and rows for time slots (8:00 am to 3:30 pm). Two class slots are highlighted: a blue one on Monday at 9:30 am and a green one on Monday at 10:30 am, both labeled 'CSE 403'. An info popup window is open over the 10:30 am slot, displaying the following information:

CSE 403					
SLN	Section	Type	Credits	Title	
11929	A	LC	4	Software Engineering	
Time Schedule					
Day	From	To	Location	Instructor	
MWF	10:30	11:20	EEB 045	Alverson, G	
Th	1:30	2:20	EEB 037	Tungaraza, R	
Enrolled	Capacity	Available	Status	Prerequisites:	
40	55	15	Open	CSE 303, CSE 326, CSE 341	
Instructor				Restrictions:	
Gail Alverson [evaluation]				CMP E, C SCI majors only	
Course Description					
Fundamentals of software engineering using a group project as the basic vehicle. Topics covered include the software crisis, managing complexity, requirements specification, architectural and detailed design... [more]					
[ ] locked					
[ ] ghosted					
[ remove ]					
[ okay ]					

On the right side of the interface, there is a 'Search for Classes' sidebar. It includes a 'Department' dropdown set to 'Computer Science', a 'Course Level' dropdown, and a 'Type of Credit' dropdown. There is also a 'Time Range' section with 'from...' and 'to...' input fields, a '[ advanced search ]' link, and a '[ search ]' button. Below this is a 'Results' section showing a list of course links: 'CSE 303 [info]', 'CSE 321 [info]', 'CSE 341 [info]', and 'CSE 370 [info]'. At the bottom of the sidebar is a '[ register! ]' button.

Fig. 2: Info popup. This displays all relevant info about a class when the class is double-clicked on.
