CSE/EE 461
Autumn 1997
Project 0
(Optional)
Due Monday, December 1 by 3:30 pm

The purpose of this project is to familiarize yourself with the building of Web pages. If you haven't done this already, it is a useful skill to know.

You should establish your homepage on weber, the University's web server for students. The homepage is http://weber.u.washington.edu/. There you will find detailed instructions on how to create and install your own home page.

By looking through many homepages I'm sure you find things you would like to incorporate into your own homepage. One thing to realize is that your homepage is accessible to the world, including potential employers, and others who may want to judge you. I guarantee you that employers look at student homepages. Because of this you should take seriously how you present yourself.

Here are a few suggestions. You should include your e-mail, home address, phone number, and photograph only if you feel secure in doing so. You should think about partitioning your homepage into a personal part and a professional part. In your professional part you can include things like your resume and links to papers or reports you have written. In your personal part you can include things like what activities you like and links to your favorite other sites.

When you have completed your homepage send me, via e-mail, your URL. I will then add a link to your homepage in the class student list on the 461 homepage. If you request it, I will will critique your homepage.

Good luck and have fun.
