Queries: Create Tables from Tables

- ❖ Concept: The operations on databases, Select, Project, Union, Difference Product create tables from tables called *Queries*
- ❖ Implementation: Database systems come with a “query language” ... SQL is the most common
- ❖ Syntax: Define the query in standard form
Select <fields of desired table>
From <list of tables>
Where <criteria for creating/combining table>

Access has two query languages, SQL and QBE,
Query By Example ... SW translates QBE into SQL
