

Test Your Tech

A local area network is:

- A. An exclusive social club.
- B. A group of computers, usually in a single building, connected by cables.
- C. Local television affiliates of the big networks.

10/7/2009

2

Announcements

- For Friday, read chapter 4 of *Fluency*

10/7/2009

D.A. Clements, MLIS, Information School

3

Announcements

- Slides for Monday and today are now available on the course Calendar.
- My goal
 - Post the slides the night before lecture so you can print them before lecture and not have to write everything down!

10/7/2009

D.A. Clements, MLIS, Information School

4

Announcements

- Pop quizzes begin in lab this week
- One every week on a day of my choice

10/7/2009

D.A. Clements, MLIS, Information School

5

Drop-In Labs

Office Hours, Drop-in Labs, and CLUE Tutoring

| When | Where | What |
|--|----------|---------------|
| Tuesdays 8:30-9:00am <i>New day and time!</i> | MGH 430 | Drop-In Labs |
| Tuesdays 3:30-4:20pm | MGH 330J | Office Hours |
| Wednesdays 1:30-2:30pm | MGH 430 | Drop-In Labs |
| Wednesdays 6:30-8:00pm <i>New day</i> | MGH 044 | CLUE Tutoring |
| Thursdays 8:30-9:00am <i>New day and time!</i> | MGH 430 | Drop-In Labs |
| Fridays 1:30-2:20pm | MGH 430 | Drop-In Labs |

Students from any lab section may go to any office hours or drop-in lab.

Labs where you can get help outside of lab or lecture

Announcements

- Register your Clickers by Thurs. night

7

Announcements

- Videocasts of the course are available within a couple hours after each lecture
- Linked at top of Calendar on the course Web site

10

Networking

More than just a social interaction

10/7/2009

D.A. Clements, MLIS, Information School

11

Networks...

- Computers are useful alone, but are better when connected (networked)
- Access more information and software than is stored locally
 - Help users to communicate, exchange information...changing ideas about social interaction
 - Perform other services—printing, Web, email

10/7/2009

D.A. Clements, MLIS, Information School

12

Networks

• How much traffic is on UW's networks each day?

UW's networks move more than trillion bytes per day

D.A. Clements, MLIS, Information School
10/7/2009

Network Structure

Networks are structured differently based (mostly) on distance between computers:

- Local area network (LAN)
 - Small area: room or building
- Wide area networks (WAN)
 - Large area: more than 1 km

D.A. Clements, MLIS, Information School
10/7/2009

Basic Types of Networks

| Network Type | Differentiating Factors |
|-----------------------------------|---|
| Peer-to-Peer | • No computer running server software |
| Server-Based Networks | • Computer running server software manages network traffic |
| • Local Area Network (LAN) | • Limited geographical area • One-time capital cost (wire or fiber optics cable installation) |
| • Wide Area Network (WAN) | • Across town or across the globe • Third-party service provider (monthly \$\$) • More bandwidth = more expense • Connects to LANs with a router |
| • Campus Network | • One-time capital expense • Buildings in close proximity |
| • Metropolitan Area Network (MAN) | • Clusters of buildings in close proximity separated from other clusters • Third-party service provider (monthly \$\$) |

D.A. Clements, MLIS, Information School
10/7/2009

LAN cabling at switch

10/7/2009

Terms

- Turn to your neighbor and write definitions for
 - EtherNet
 - HTTP
 - TCP/IP
- I will call on three groups for definitions

D.A. Clements, MLIS, Information School
10/7/2009

Protocol Rules!

To communicate computers need to know how to set up the info to be sent and interpret the info received

- Communication rules are a *protocol*
- Example protocols
 - EtherNet—for physical connection in a LAN
 - TCP/IP—for Internet—transmission control protocol / internet protocol
 - HTTP—for Web—hypertext transfer protocol

D.A. Clements, MLIS, Information School
10/7/2009

LAN in the Lab

EtherNet is a popular LAN protocol

- Recall, it's a "party" protocol

Connection to campus network infrastructure

Typical MGH or OUGL Lab

Ether Net Cable

10/7/2009 D.A. Clements, MLIS, Information School 19

Campus & The World

The campus subnetworks interconnect computers of the UW domain which connects to Internet via a gateway

All communication by TCP/IP

10/7/2009 D.A. Clements, MLIS, Information School 20

IP—Like Using Postcards

Information is sent across the Internet using IP—Cerf uses postcard analogy

- Break message into fixed size units
- Form IP packets with destination address, sequence number and content
- Each makes its way separately to destination, possibly taking different routes
- Reassembled at destination forming msg

addr # data

Taking separate routes lets packets by-pass congestion and out-of-service switches

10/7/2009 D.A. Clements, MLIS, Information School 21

TCP/IP

Packet-Switching Animation

10/7/2009 D.A. Clements, MLIS, Information School 22

A Trip to Switzerland

A packet sent from UW to ETH (Swiss Fed. Tech. University) took 21 hops

| Hop | IP Address | Node Name | Location | ms | Network |
|-----|---------------|--|----------------|-----|---|
| 0 | 128.95.1.207 | spiff.csresearch.cs.washington.edu | --- | 0 | University of Washington WASHINGTON |
| 1 | 128.95.1.100 | spiff.csresearch.cs.washington.edu | --- | 0 | University of Washington WASHINGTON |
| 2 | 140.142.150.1 | zwtor2-OEO-1.cac.washington.edu | --- | 0 | University of Washington UWN-SEA |

 - South Africa www.uct.ac.za

Use Google to find foreign computers

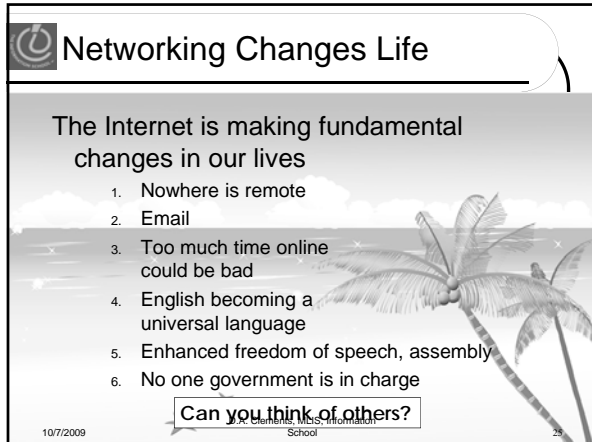

10/7/2009 D.A. Clements, MLIS, Information School 24

Networking Changes Life

The Internet is making fundamental changes in our lives

1. Nowhere is remote
2. Email
3. Too much time online could be bad
4. English becoming a universal language
5. Enhanced freedom of speech, assembly
6. No one government is in charge

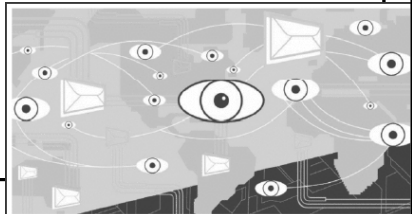

Can you think of others?

10/7/2009 D.A. Clements, MLIS, Information School 25

Privacy and Security issues

- Sweden handed internet for its neighbors June 2008
 - New Signal Surveillance Act
- Local hub for
 - Norway
 - Finland
 - Russia

10/7/2009

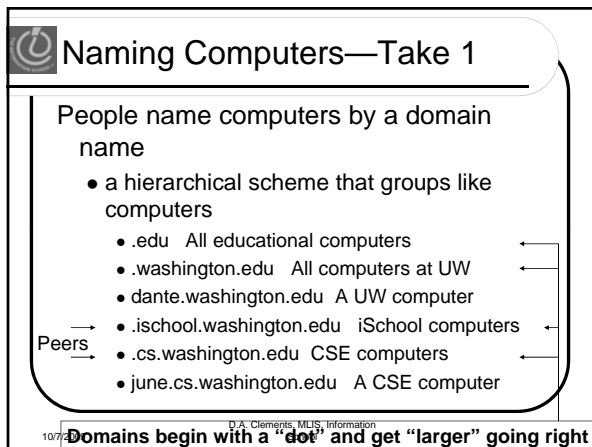

Naming Computers—Take 1

People name computers by a domain name

- a hierarchical scheme that groups like computers
 - .edu All educational computers
 - .washington.edu All computers at UW
 - dante.washington.edu A UW computer
 - .ischool.washington.edu iSchool computers
 - .cs.washington.edu CSE computers
 - june.cs.washington.edu A CSE computer

Peers →

Domains begin with a "dot" and get "larger" going right

10/7/2009 D.A. Clements, MLIS, Information School 26

Naming Computers—Take 2

Computers are named by IP address, four numbers in the range 0-255

cse.washington.edu: 128.95.1.4
 ischool.washington.edu: 128.208.100.150

- Remembering IP addresses would be brutal for humans, so we use domains
- Computers find the IP address for a domain name from the *Domain Name System*—an IP address-book computer

A computer needs to know IP address of DNS server!

10/7/2009 D.A. Clements, MLIS, Information School 27

Domains

.edu .com .mil .gov .org .net domains are "top level domains" for the US

- Recently, new TLD names added
- Each country has a top level domain name:
 - .ca (Canada)
 - .es (Spain)
 - .de (Germany)
 - .au (Australia)
 - .at (Austria)
 - .us (US)

The *Fluency* book contains the complete list—page 72

10/7/2009 D.A. Clements, MLIS, Information School 29

Terms

- Turn to your neighbor and write definitions for
 - Logical network
 - Physical network
- I will call on two groups for definitions

10/7/2009 D.A. Clements, MLIS, Information School 30

Logical vs Physical

View the Internet in two ways:

1. Humans see a hierarchy of domains relating computers—logical network
2. Computers see groups of four number IP addresses—physical network

Both are ideal for the “user’s” needs

- The Domain Name System (DNS) relates the logical network to the physical network by translating domains to IP addresses

10/7/2009

D.A. Clements, MLIS, Information School

31

Internet vs. World Wide Web

- With your neighbor, write down definitions for
 - Internet
 - World Wide Web

Internet: all of the wires, fibers, switches, routers etc. connecting named computers

Web: That part of the Internet that stores and serves Web pages—web servers, client computers

10/7/2009

D.A. Clements, MLIS, Information School

32

Summary

Networking is changing the world

Internet: named computers using TCP/IP

WWW: servers providing Web pages

- Principles
 - Logical network of domain names
 - Physical network of IP addresses
 - Protocols rule: LAN, TCP/IP, http...
 - Domain Name System connects the two
 - Client/Server, fleeting relationship on WWW

10/7/2009

D.A. Clements, MLIS, Information School

33

Coming up....

- Submit HW1 by tonight at 10pm
- Submit clicker registration by tomorrow at 10pm
- Read chapter 4 for Friday
- Online quiz in labs today and tomorrow
 - You must attend lab to take the quiz!

10/7/2009
