

Terminology

Chapter 1

Why Are Words Important?

- Connection between language and thought
 - 1984 and Newspeak
 - Wine appreciation
- Communication with others
 - "The cup holder on my PC is broken"*
 - Where is the computer?

* <http://www.rinkworks.com/stupid/>

2

Where Is The Computer?

Computer case houses CPU (Central Processing Unit), power supply, DVD drive, etc

Keyboard

3

Motherboard

- Circuit board containing most of the circuitry of a personal computer (PC) system
- Contains the **CPU (central processing unit)**—the part that does the computing
 - <http://biorobots.cwru.edu/serve/howto/buildcomp/mountcpu/>
- Can extend functionality via **daughterboards** (more often called: **cards**)

Figure 1.9 A computer motherboard.

4

Buying A Computer

- What are you looking for in a computer?

5

Buying A Computer

Model	Starting Price	Subtotal
Inspiron 1525	\$619	\$499
Inspiron 1525	\$759	\$599
Studio 15	\$864	\$699
XPS M1530	\$1,469	\$1,049

6

Inspiron 1525 Intel® Core™ E660 (1 MB cache) 2.13 GHz (2.33 GHz FSB)	Inspiron 1525 Intel® Pentium® Dual Core E5300 (2.00 GHz) 2 MB cache (FSB 800 MHz)	Studio 15 Intel® Core™ 2 Duo E5500 (2.33 GHz) 3 MB cache (FSB 800 MHz)	XPS M1530 Intel® Core™ 2 Duo E5500 (2.33 GHz) 3 MB cache (FSB 800 MHz)

What is SATA?

What's the difference between Wireless-N and 802.11g?

What Do All These Words Mean?

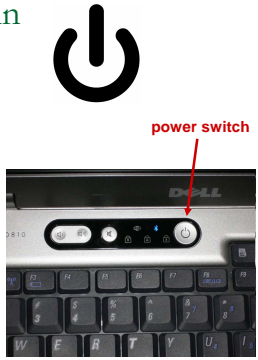

- How do you find out what these words mean?
 - Search online: Wikipedia, Google, etc...
 - Is the information reliable? (Future lecture)
 - Ask others
- Are they all important?
 - Not really, but there are some basic terms you should be familiar with.

Wiki

- wiki**: page or collection of web pages designed to enable anyone who accesses it to contribute or modify content
 - "wiki wiki" means "quick" in Hawaiian

On Again, Off Again

- boot**: start a computer
- reboot (or power cycle)**: restart a computer; turn off and then on again

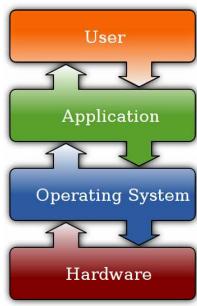

Hardware and Software

- hardware**: physical devices
- software**: computer programs (instructions for a computer)

Operating System

- operating system (OS)**: infrastructure software component of a computer system responsible for management and coordination of activities (e.g., operating the hardware) and the sharing of the limited resources (e.g., memory) of the system

Operating System (cont'd)

- Examples:
 - Windows
 - Mac OS
 - Linux
 - Solaris
- Not limited to desktop and laptop computers: video game consoles, handheld devices (e.g., cell phones), etc...

13

Hard Drive vs. Memory

- **hard drive:** persistent storage
 - Data does not disappear after you turn off the computer
 - "Long-term memory"
- **memory:** where programs and their data reside while in use
 - Data not saved will be lost if the computer crashes
 - Also called RAM (Random Access Memory)
 - "Short-term memory"

Figure 1.11 A hard disk.

14

Byte

- **byte:** unit of measurement of information
 - Similar to gram for mass and watt for power
 - Use with standard prefix multipliers: kilobyte (KB), megabyte (MB), gigabyte (GB), terabyte (TB), petabyte (PB), etc...
 - **kilo:** 1,000
 - **mega:** 1,000,000
 - **giga:** 1,000,000,000
 - **tera:** 1,000,000,000,000
 - **peta:** 1,000,000,000,000,000
 - For more information, see: http://searchstorage.techtarget.com/sDefinition/0,,sid5_gci4_99008,00.html

15

Byte (cont'd)

- How much information is in a byte?
 - To be addressed in a future lecture
- How much hard drive space do you need?
 - Depends on how you use your computer
 - 20-page English essay ~ 120 KB
 - Song ~ 5 MB
 - 30-minute TV episode ~ 200 MB
 - Compressed movie ~ 800 MB
 - DVD-quality movie ~ 4 GB

16

Byte (cont'd)

- How much memory do you need?
 - Depends on how you use your computer
 - More RAM means more programs can be run simultaneously. Can also run more data-intensive software.
 - Running too many programs with not enough RAM will result in the computer grinding to a halt (or running painfully slow)
 - For most people (in 2009), 1-2 GB is sufficient.

17

Need For Speed

- **clock rate** (or **clock speed**): fundamental rate in cycles per second (measured in **hertz**) at which a computer performs its most basic operations such as adding two numbers
 - Use with standard prefix multipliers: megahertz (MHz) and gigahertz (GHz)
- Comparisons only useful between computer chips in the same processor family
 - For example, clock speeds of an Intel 486 CPU is not directly comparable to a MIPS R4000.*
- Without knowing anything about processor families, 2.0 GHz or more should be fast enough for most people (in 2009).
 - My computer (1.6 GHz) could be faster, but it gets the job done.

*The processor family names are not important. You only need to know them if you really want the latest and greatest.

18

Video

- **video card** (or **graphics card**): hardware component responsible for generating and outputting images to a display (e.g., monitor or TV)
- **pixel**: smallest displayable unit in an image (short for **picture element**)
 - Ken Rockwell, *The Megapixel Myth* (<http://www.kenrockwell.com/tech/mpmyth.htm>)
 - Factoid: In 3-D, the smallest unit is a **voxel** (**volumetric pixel**)

19

Resolution

- **resolution**: number of pixels in each dimension that can be displayed, specified as width x height
 - Examples:
 - 1280x1024
 - 640x480
 - 1024x768 (maximum resolution of many projectors)

20

Peripheral

- **peripheral**: external device connected to a computer whose functionality is dependent upon the computer
 - Examples:
 - printer
 - scanner
 - speaker
 - external hard drive

21

USB vs. FireWire

- In the "old days", peripheral devices (such as printers, mice, and keyboards) each required special sockets.
- USB and FireWire standardized the interfaces.

22

USB vs. FireWire

- USB 

- FireWire 
FireWire

23

Drive

- **drive**: device that reads data and often writes data onto a storage medium
 - Examples:
 - hard drive
 - CD-ROM drive

24

USB Flash Drive

- **USB flash drive:** portable rewriteable data storage device with a USB interface
- Also known as **USB stick, thumb drive, or simply flash drive.**

25

Device Driver

- **(device) driver:** program that allows other programs to interact with a hardware device

26
