# CSE 331 Software Design & Implementation

Dan Grossman Spring 2015 Course Victory Lap

(Based on slides by Mike Ernst, Dan Grossman, David Notkin, Hal Perkins)

### **Today**

- Reminder: Do your course evaluations (!)
- · Final-exam information
- · Last few topics in previous lecture as needed
- · Course "victory lap"
  - High-level overview of main ideas and goals
  - Connection to homeworks
  - Context
- Also:
  - Thank-yous
  - Time permitting: Free-form Q&A

CSE331 Spring 2015

-

#### Final-exam information

- Monday, 8:30-10:20AM
- · Very heavily weighted toward second half of course
- See email from me and sample exams
- · As usual, "tough but fair and rewarding"

## Victory Lap

A victory lap is an extra trip around the track

 By the exhausted victors (that's us) <sup>(3)</sup>

- Slides from Lecture 1
- What makes CSE331 special

CSE331 Spring 2015

CSE331 Spring 2015

#### Huge thanks to the folks who made it work

Infrastructure: Vinod, Chris

Sections: Kevin, Vinod

Grading: Uldarico, Naruto, Chris, Kevin, Vinod

Office hours, email questions, etc.: all

This course is itself a sophisticated system requiring savvy design and implementation

Except for svn problems ("not our fault" ⊗), everything has been eerily smooth.

CSE331 Spring 2015

3 slides from Lecture 1...

CSE331 Spring 2015

## 10 weeks ago: Welcome!

We have 10 weeks to move well beyond novice programmer.

- · Larger programs
  - Small programs are easy: "code it up"
  - Complexity changes everything: "design an artifact"
  - Analogy: using hammers and saws vs. making cabinets (but not yet building houses)
- Principled, systematic software: What does "it's right" mean?
   How do we know "it's right"? What are best practices for "getting it right"?
- Effective use of languages and tools: Java, IDEs, debuggers, JUnit, JavaDoc, Subversion, ...
  - Principles are ultimately more important than details
    - · You will forever learn details of new tools/versions

CSE331 Spring 2015

7

#### 10 weeks ago: Goals

- · CSE 331 will teach you to how to write correct programs
- · What does it mean for a program to be correct?
  - Specifications
- · What are ways to achieve correctness?
  - Principled design and development
  - Abstraction and modularity
  - Documentation
- · What are ways to verify correctness?
  - Testing
  - Reasoning and verification

CSE331 Spring 2015

# 10 weeks ago: Managing complexity

- Abstraction and specification
  - Procedural, data, and control flow abstractions
  - Why they are useful and how to use them
- · Writing, understanding, and reasoning about code
  - Will use Java, but the issues apply in all languages
  - Some focus on object-oriented programming
- Program design and documentation
  - What makes a design good or bad (example: modularity)
  - Design processes and tools
- · Pragmatic considerations
  - Testing
  - Debugging and defensive programming
  - [more in CSE403: Managing software projects]

CSE331 Spring 2015

9

Some new slides to tie the pieces together...

CSE331 Spring 2015

10

#### Divide and conquer: Modularity, abstraction, specs

No one person can understand all of a realistic system

- Modularity permits focusing on just one part
- · Abstraction enables ignoring detail
- Specifications (and documentation) formally describe behavior
- Reasoning relies on all three to understand/fix errors
  - Or avoid them in the first place
  - Proving, testing, debugging: all are intellectually challenging

How CSE 331 fits together

Lectures: ideas ⇒ Assignments: get practice

 $\begin{array}{ll} \text{Specifications} & \Rightarrow \text{Design classes} \\ \text{Testing} & \Rightarrow \text{Write tests} \\ \text{Subtyping} & \Rightarrow \text{Write subclasses} \end{array}$ 

Equality & identity  $\Rightarrow$  Override equals, use collections

Generics ⇒ Write generic classes

Design patterns ⇒ Larger designs; MVC

Reasoning, debugging ⇒ Correctness, testing

Events  $\Rightarrow$  GUIs Systems integration  $\Rightarrow$  N/A

#### What you have learned in CSE 331

Compare your skills today to 10 weeks ago

- Theory: abstraction, specification, design
- Practice: implementation, testing
- Theory & practice: correctness

Bottom line aspiration: Much of what we've done would be

easy for you today

This is a measure of how much you have learned

There is no such thing as a "born" programmer!

Genius is 1% inspiration and 99% perspiration.
Thomas A. Edison

CSE331 Spring 2015

#### What you will learn later

- · Your next project can be much more ambitious
  - But beware of "second system" effect
- · Know your limits
  - Be humble (reality helps you with this)
- · You will continue to learn
  - Building interesting systems is never easy
    - · Like any worthwhile endeavor
  - Practice is a good teacher
    - · Requires thoughtful introspection
    - · Don't learn only by trial and error!
  - Voraciously consume ideas and tools

CSE331 Spring 2015

14

#### What comes next?

#### Courses

- CSE 403 Software Engineering
  - Focuses more on requirements, software lifecycle, teamwork
- Capstone projects
- Any class that requires software design and implementation

#### Research

- In software engineering & programming systems
- In any topic that involves software

Having an impact on the world

- Jobs (and job interviews)
- Larger programming projects

CSE331 Spring 2015

15

#### Last slide

- System building is fun!
  - It's even more fun when you're successful
- · Pay attention to what matters
  - Take advantage of the techniques and tools you've learned (and will learn!)
- · On a personal note:
  - Don't be a stranger: I love to hear how you do in CSE and beyond as alumni
- Time for "ask anything you want"?
