# The Hardware/Software Interface

CSE 351 Spring 2024

#### **Instructor:**

Elba Garza

#### **Teaching Assistants:**

Ellis

Adithi

**Aman** 

Brenden

Celestine

Chloe

Claire

Hamsa

Maggie

Malak

Naama

**Nikolas** 

Shananda

Stephen

Will

### **Lecture Outline**

- Course Introduction
- Course Policies
  - Syllabus
- Binary and Numerical Representation

### **Introductions: Course Staff**

- Instructor: Elba, just Elba
  - CSE Assistant Teaching Professor
  - PhD in CS, particularly Computer Architecture

#### TAs:

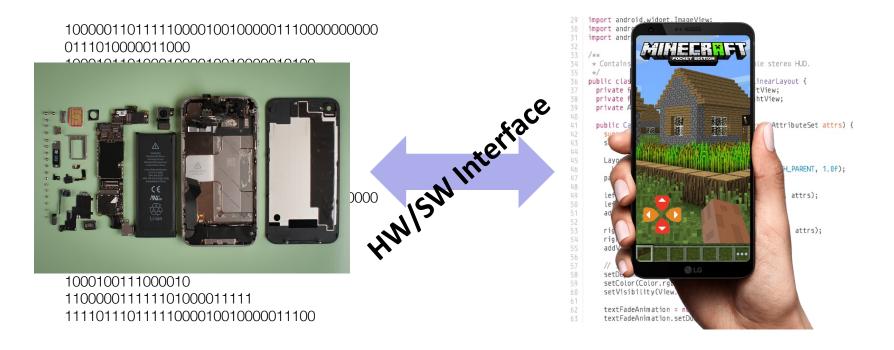

Ellis Adithi Aman Brenden Celestine Chloe Claire Hamsa Maggie Malak Naama Nikolas Shananda Stephen Will

- Available in section, office hours, and on Ed Discussion
- More than anything, we want you to feel...
  - ✓ Comfortable and welcome in this space
  - ✓ Able to learn and succeed in this course
  - ✓ Comfortable reaching out if you need help or want change.

### Introductions: You!

- ~250 students registered, split across two lectures
- CSE majors, ECE majors, and more
  - Most of you will find almost everything in the course new
  - Many of you are new to CSE and/or UW (and campus)!
- Get to know each other! Help each other out!
  - Science says that learning happens best in groups
  - Working well with others is a valuable life skill
  - Diversity of perspectives expands your horizons
  - Take advantage of group work, where permissible, to <u>learn</u>, not just get a grade

### Welcome to CSE351!

- Our goal is to teach you the key abstractions "under the hood"
  - How does your source code become something that your computer understands?
  - What happens as your computer is executing one or more processes?

# **Layers of Computing Below Programming**

Likely 2014 before where been 351.

Software Applications (written in Java, Python, C, etc.)

OS/App interface

Programming Languages & Libraries (e.g., Java Runtime Env, C Standard Lib)

HW/SW interface

Operating System (e.g., Linux, MacOS, Windows)

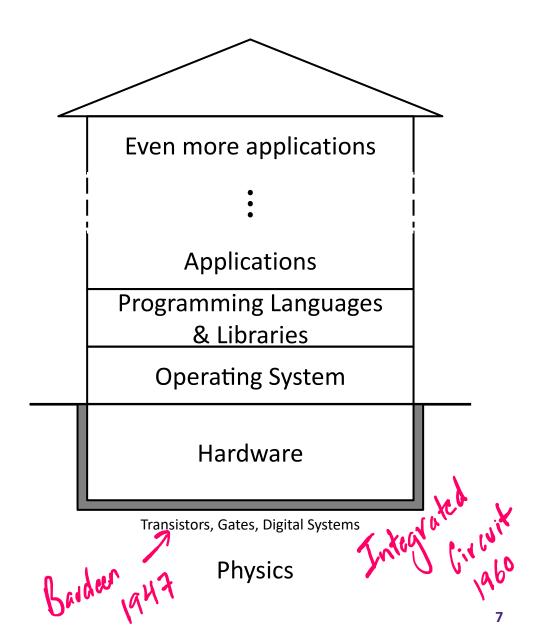

Hardware

(e.g., CPU, memory, disk, network, peripherals)

# "House" of Computing Metaphor

- We continue to build upward but everything relies on the base & foundation
  - We'll explore parts of Hardware, OS, and PL
- Built a long time ago
  - Some parts have been updated over the years, some have not
  - More remodeling necessary, but should understand how and why things are this way before demolishing anything

# The Hardware/Software Interface

- \* Topic Group 1: Data here!
  - Memory, Data, Integers, Floating Point, Arrays, Structs
- Topic Group 2: Programs
  - x86-64 Assembly, Procedures, Stacks, Executables
- Topic Group 3: Scale & Coherence
  - Caches, Processes, Virtual Memory, Memory Allocation
- Learning in this class
  - You might miss Java, but we just ask you to keep your heart open; something unexpected might pique your interest!
  - Notice and nurture any wants to linger in some space
    - Many future classes to explore this space more

# Some fun topics that we will touch on

- Which of the following seems the most interesting to you? (vote in Ed Lessons)
- a) What is a GFLOP and why is it used in computer benchmarks?
- b) How and why does running many programs for a long time eat into your memory (RAM)?
- c) What is stack overflow and how does it happen?
- d) Why does your computer slow down when you run out of *disk* space?
- e) What was the flaw behind the original Internet worm, the Heartbleed bug, and the Cloudbleed bug?
- f) What is the meaning behind the different CPU specifications? (e.g., # of cores, size of cache)

CSE351, Spring 2024

### **Lecture Outline**

- Course Introduction
- Course Policies
  - Syllabus
- Binary and Numerical Representation

### **Bookmarks**

- try this: cs. uw.eds/351
- Website: <a href="https://courses.cs.washington.edu/courses/cse351/24sp/">https://courses.cs.washington.edu/courses/cse351/24sp/</a>
  - Schedule, policies, materials, videos, assignment specs, etc.
- Ed Course: <a href="https://edstem.org/us/courses/56848/">https://edstem.org/us/courses/56848/</a>
  - Discussion: announcements, ask and answer questions
  - Lessons: readings, lecture questions, homework
  - Resources: links to other tools and information
- Linked from website and Ed
  - Canvas: surveys, grade book
  - Gradescope: lab submissions, take-home exams
  - Panopto: lecture recordings

# **Grading**

- Pre-lecture Readings: 5%
  - Can reveal solution after one attempt (completion)
- Homework: 20% total

- Unlimited submission attempts (autograded correctness)
- \* Labs: 40% total ish -ish / partners!
  - Last submission graded (correctness)
- \* Exams: Midterm (16%) and Final (16%)
  - Take-home; individual, but some discussion permitted
- **EPA:** Effort, Participation, and Altruism (3%)

## **Group Work in 351**

- Group work will be emphasized in this class
  - Lecture and section will have built-in group work time
    - you will get the most out of it if you actively participate!
    - TAs will circle around the room and interact with groups
    - Raise your hand to get the attention of a staff member
  - Most assignments allow collaboration talking to classmates will help you synthesize concepts and terminology
    - The major takeaways for this course will be the ability to explain the major concepts verbally and/or in writing to others
  - However, the responsibility for learning falls on you

# **Lab Collaboration and Academic Integrity**

- All submissions are expected to be yours and yours alone
- You are encouraged to discuss your assignments with other students (ideas), but we expect that what you turn in is yours
- It is NOT acceptable to copy solutions from other students or to copy (or start your) solutions from the Web (including Github, Chegg, and similar sites)
- Our goal is that <u>YOU</u> learn the material so you will be prepared for exams, interviews, and the future

### **Office Hours**

- Check Weekly Calendar on website for scheduled office hours.
  - Coming soon!
  - Office hours will start this week on Wednesday, March 27<sup>th</sup>
- Office hours will use a Google Sheets queue:
  - Fill out first 3 columns to enter queue:

Name(s)	Category	Description	Time Queued	Staff	Status
Example 1	Concept	Question about floating point encoding range.		Justin	Done ▼
Example 2	Debugging	Lab 5: running into a segfault in mm_malloc after reaching end of the heap.		Justin	Done ▼
Example 3	Spec	Lab 1a: confusion over within same block examples		Justin	Done ▼
Example 4	Tools	GDB: how do I examine memory on the stack?		Justin	Done ▼

• We encourage you to chat with other students if the TAs are busy!

### Extensions, Accommodations, Help

- Extenuating circumstances
  - Students (and staff) face an extremely varied set of environments and circumstances
  - For formal accommodations, go through Disability Resources for Students (DRS)
  - We will try to be accommodating otherwise, but the earlier you reach out, the better
- Don't suffer in silence talk to a staff member!
  - We have a 1-on-1 meeting request form

### **TODO List**

#### Admin

- Explore/read the course website thoroughly. It's a work in progress, but stuff will get there!
- Check that you can access Ed Discussion & Lessons
- Get your machine set up to access the CSE Linux environment (attu or calgary) as soon as possible!
- Optionally, sign up for CSE 391: System and Software Tools

### Assignments

- Pre-Course Survey & HW0 due Wednesday (3/27)
- HW1 due Friday (3/29) & Lab 0 due Monday (4/01)
- Pre-lecture readings due <u>before</u> lecture @ 11 am

### **Lecture Outline**

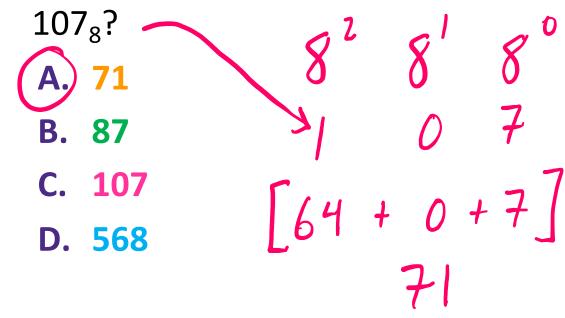

- Course Introduction
- Course Policies
  - Syllabus
- Binary and Numerical Representation

# **Reading Review**

- Terminology:
  - numeral, digit, base, symbol, digit position, leading zeros
  - binary, bit, nibble, byte, hexadecimal
  - numerical representation, encoding scheme
- Questions from the reading?

### **Review Questions**

What is the decimal value of the numeral

\* Represent
0b100110110101101
in hex. D A D

What is the decimal number 108 in hex?

Represent 0x3C9 in binary.

D. 0x612

## **Base Comparison**

- Why does all of this matter?
  - Humans think about numbers in base 10, but computers "think" about numbers in base 2
  - Binary encoding is what allows computers to do all of the amazing things that they do!
- \* You should have this table memorized by the end of the class
  - Might as well start now!

I believe in you "

Base 10	Base 2	Base 16	
0	0000	0	
1	0001	1	
2	0010	2	
3	0011	3	
4	0100	4	
5	0101	5	
6	0110	6	
7	0111	7	
8	1000	8	
9	1001	9	
10	1010	Α	
11	1011	В	
12	1100	С	
13	1101	D	
14	1110	Е	
15	1111	F	

### **Numerical Encoding**

### \* AMAZING FACT: You can represent anything countable using numbers!

- Need to agree on an encoding
- Kind of like learning a new language

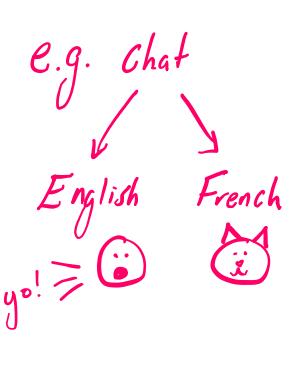

### Examples:

- Decimal Integers: 0→0b0, 1→0b1, 2→0b10, etc.
- English Letters: CSE $\rightarrow$ 0x435345, yay $\rightarrow$ 0x796179
- Emoticons:  $\stackrel{\text{\tiny $0$}}{}$  0x0,  $\stackrel{\text{\tiny $0$}}{}$  0x1,  $\stackrel{\text{\tiny $0$}}{}$  0x2,  $\stackrel{\text{\tiny $0$}}{}$  0x3,  $\stackrel{\text{\tiny $0$}}{}$  0x4,  $\stackrel{\text{\tiny $0$}}{}$  0x5

# **Binary Encoding**

- With n binary digits, how many "things" can you represent?
  - Need n binary digits to represent N things, where  $2^n \ge N$
  - **Example**: 5 binary digits for alphabet because  $2^5 = 32 > 26$

- A binary digit is known as a bit
- A group of 4 bits (1 hex digit) is called a nibble
- A group of 8 bits (2 hex digits) is called a byte
  - 1 bit  $\rightarrow$  2 things, 1 nibble  $\rightarrow$  16 things, 1 byte  $\rightarrow$  256 things possible

### So What's It Mean?

### A sequence of bits can have many meanings!

- Consider the hex sequence 0x4E6F21
  - Common interpretations include:
    - The decimal number 5140257
    - The real number  $7.203034 \times 10^{-39}$
    - The characters "No!"
    - The horrid background color of this slide... والمالية المالية المال

It is up to the program/programmer to decide how to interpret the sequence of bits

# **Binary Encoding – Characters/Text**

- ASCII Encoding (<u>www.asciitable.com</u>)
  - American Standard Code for Information Interchange, 1963

# **Binary Encoding – Characters/Text**

- ASCII Encoding (<u>www.asciitable.com</u>)
  - American Standard Code for Information Interchange
- Created in 1963
  - Memory was expensive, 32KB in brand new machines
  - Economic incentive to use fewer bits for encoding (7 bits, not even a byte!)

### Design Goals:

- Represent everything on an American typewriter as efficiently as possible
- Organize similar characters together
  - Numbers, uppercase, lowercase, then other stuff

## Binary Encoding – Unicode & Emoji

- Unicode Standard is managed by the Unicode Consortium
  - "Universal language" that uses 1-4 bytes to represent a much larger range of characters/languages, including emoji
  - Adds new emojis every year, though adoption often lags: <a>\bigs</a>
    - https://emojipedia.org/new/
- Emojipedia demo: <a href="http://www.emojipedia.org">http://www.emojipedia.org</a>
  - Desktop Computer:
  - Code points: U+1F5A5, U+FE0F
  - Display:

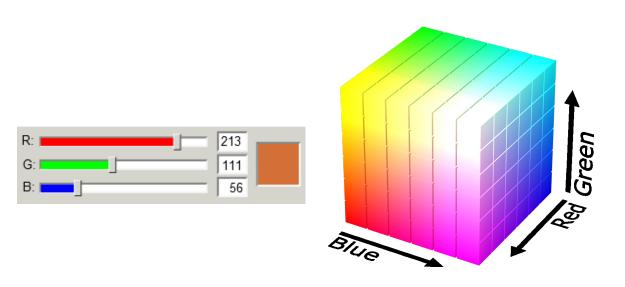

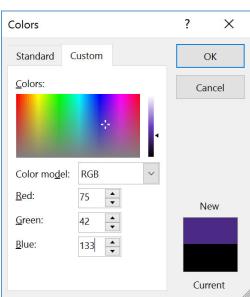

## **Binary Encoding – Colors**

- RGB Red, Green, Blue
  - Additive color model (light): byte (8 bits) for each color
  - Commonly seen in hex (in HTML, photo editing, etc.)
  - Examples: Blue→0x0000FF, Gold→0xFFD700, White→0xFFFFFF, Deep Pink→0xFF1493

## **Binary Encoding – Files and Programs**

- At the lowest level, all digital data is stored as bits!
- Layers of abstraction keep everything comprehensible
  - Data/files are groups of bits interpreted by program
  - Program is actually groups of bits being interpreted by your CPU

## **Summary**

- Humans think about numbers in decimal; computers think about numbers in binary
  - Base conversion to go between them
  - Hexadecimal is more human-readable than binary
- All information on a computer is binary
- Binary encoding can represent anything!
  - Computer/program needs to know how to interpret the bits
  - Encodings aren't "neutral"; priorities are baked in
