T.A. Help Session: Union Find

r.A. neip Session: Union Find							
a. Show	the result	ing up Up-	Tree data s	tructure af	ter the follo	owing unior	ıs:
union(1 !	5) union(3	7) union(5	,6), union(1,	4) union(6	2) union(5	3)	
J. 11011(1,	<i>o)</i> , armori(o,	,,,, amonto	,0), amon(1,	1), αιποτι(ο,	<i>_</i>), a.mon(o,	,0)	
Fill in tl		-	array impler			6	7
	he resultin 1	ng up-tree a	array impler 3	mentation v	with 5	6	7
Fill in tl up		-				6	7
		-				6	7
up		-				6	7
up weight	1	2	3 e of a union	4 operation	5 	6	7
up weight /hat is th	1 ne worst-ca	2 ase runtime	3 e of a union	4 operation operation	5 		
up weight /hat is th	1 ne worst-ca	2 ase runtime	3 e of a union	4 operation operation	5 		
up weight /hat is th	1 ne worst-ca	2 ase runtime	3 e of a union	4 operation operation	5 		
up weight /hat is th	1 ne worst-ca	2 ase runtime	3 e of a union	4 operation operation	5 		

2. Pseudocode

a. Write pseudocode for a basic union operation:

```
int[] up;
public void union(int x, int y)
```

b. Write pseudocode for a union-by-weight operation:

```
int[] up;
int[] weight;
public void unionByWeight(int x, int y)
```

c. Write pseudocode for a basic find operation:

```
int[] up;
public int find(int x)
```

d. Write pseudocode for a find operation, implementing path compression:

```
int[] up;
public int findWithPathCompression(int x)
```
