#### **T9** and **Tries**

#### CSE 374 Homework 5, Winter 2012

#### **T9 Predictive Text**

- What is T9? Demo
- T9onyms:
- 1. 22737: acres, bards, barer, bares, baser, bases, caper, capes, cards, cares, cases
- 2. 46637: goner, goods, goofs, homer, homes, honer, hones, hoods, hoofs, inner
- 3. 2273: acre, bard, bare, base, cape, card, care, case
- 4. 729: paw, pay, Paz, raw, ray, saw, sax, say
- 5. 76737: pores, poser, poses, roper, ropes, roses, sorer, sores
- How does T9 order T9onyms?
  - Assignment Requirement: Alphabetical order
  - Extra credit options: Frequency, Dynamic Frequency

# Trie

- Tree structure: n-ary tree
- We use a trie to store pieces of data that have a key (used to identify the data) from an alphabet
  - Optionally can also hold a *value* (which holds any additional data associated with the key).
- Applications:
  - Spell checkers
  - Auto-complete
  - Data compression
  - T9 predictive text input for cell phones
  - String search

## Example: String Search

- Goal:
  - Determine if a given word appears in a block of text.
  - Optimize for multiple searches in the same block of text
- What do we do?
  - Place each word in the block of text into a data structure
  - Use data structure to determine whether a word exists in that block of text
- Which data structure should we use?

## String Search Trie

• Text: sells sea shells by the shore

#### String Search Trie

• Search for: shells

## Building a Trie for T9

- How is a T9 Trie different?
  - Alphabet: {2-9}

#### Handling T9onyms 8) 4) [is] [car] [cap]

#### Handling T9onyms # 6) # # is] # 8) [cap][car] 6 7 #

## Extra Credit

- More accurately implement T9:
  - 1. Store the prefix of each word in the text file in the trie—

- example: foobar- "f", "fo", "foo", "foob", "fooba", "foobar"

- 2. Order a word in the Trie by its frequency
  - -A word with a higher frequency will be predicted before a lower frequency word. In the text file (listed on assignment), the format of an entry will be
  - word frequency
- 3. Update the frequency of a word
  - Each time a word is used, increment the word's frequency
  - Prediction of words should use updated frequencies
