Tips for Deployment

CSE 403, Spring 2004
Software Engineering

Adding iPaq to Network

- http://norfolk.cs.washington.edu/htbin-post/unrestricted/lab/RegisterMAC.cgi/register

- Start → Settings → System

- Network → MAC address

Deploying App to Device

- Find compiled executable

  - Usually in the "bin\Debug" or "bin\Release" folder of the project

- Place executable in web accessible directory

- Download onto iPaq

Deploying Web Services

- Web services can be run on IISQLSRV

- Follow the same procedure as setting up your services on a lab machine

- Please do not use IISQLSRV for development
