

# Project Overview

---

CSE 403, Spring 2004  
Software Engineering

# Project Goals

---

- To provide opportunities to employ software engineering principles
- To allow groups to develop applications that incorporate their interests and expertise
- Emphasize creating a good mobile client user experience
- Encourage creativity

# Project Requirements

---

- Server
- Client(s) for web, desktop, and/or handheld
- Web Service API
- Formal definition given in HW 1 which will be distributed next Wed 4/7

# Project Resources

---

- Server development...Your Choice!
  - .NET and Visual Studio recommended
- Client development...Your Choice!
  - Web based
  - Platform specific
  - Mobile client

# Project Resources (tentative)

---

- Windows Mobile 2003 Hardware
  - Audio, Video, Bluetooth, .NET compact
- .NET Compact Reference Books
- Windows Mobile 2003 SDK
- Unlimited Subscription to MapPoint Service

# Project Ideas

---

- Create new service
- Aggregate existing services
- Extend existing services
- Examples?

# Possible Architecture

---

Web Resources

Server

Clients

# Sample Project

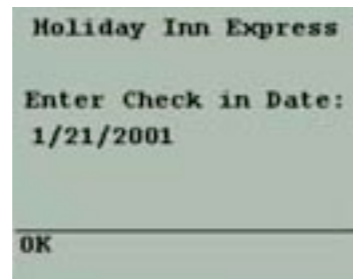

---

- Image Search
- Server
  - Take in keyword or image and searches various web resources for similar images
  - Return urls of matching images
- Client
  - Act as interface to server's API
  - Provide seamless image library management

# Trends in Mobile Computing

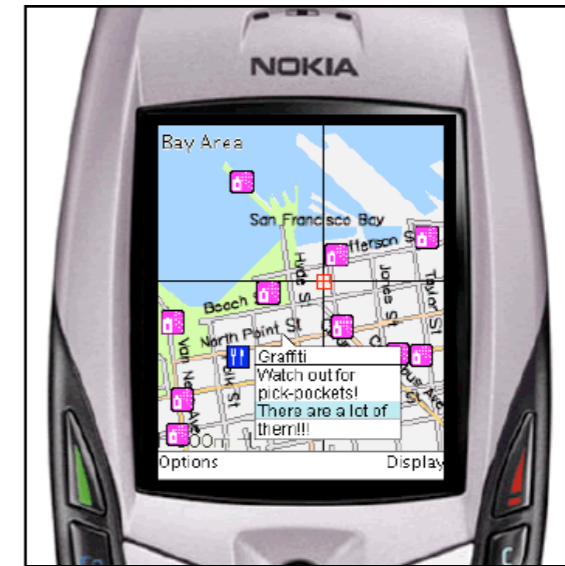

---

WAP

Limited Connectivity

Limited Devices

Rich Multimedia

Persistent, High Speed Networks

Smartphones, PDAs

# Mobile Computing

---

- Portable
  - Camera → Capture spontaneous moments
  - GPS, signal triangulation → Location aware
  - Bluetooth → Device connectivity
- Personal
  - Ringtones, graphics, accessories → Express individuality
  - Personalized content
  - Text messaging

# Mobile Computing (cont.)

---

- Connectivity
  - 3G, 802.11x → Always connected
- Progressing
  - Updated hardware quarterly

Nokia 7610

Motorola Mpx

# What will people pay for?

---

**“ People like to interact with people they care about. The interactions are often simple, but personally important. They are willing to pay money for this. ”**

- Take advantage of available features to facilitate interactions
- Focus on creating good user experiences

*<http://www.bricklin.com/peoplepay.htm>*

# What is a Web Services?

---

*” Web services are a new breed of Web application. They are self-contained, self-describing, modular applications that can be published, located, and invoked across the Web. Web services perform functions, which can be anything from simple requests to complicated business processes...Once a Web service is deployed, other applications (and other Web services) can discover and invoke the deployed service. “*

<http://webservices.xml.com/pub/a/2001/04/04/webservices/index.html?>  
page=3#ibmtut

# Terminology

---

- XML is used to tag the data
- SOAP is used to transfer the data
- WSDL is used for describing the services available
- UDDI is used for listing what services are available

# Advantages of Web Services

---

- Provides standardized communication of data across applications and platforms
- Works over the web
- Allows functionality to be made public and reused by applications
- <http://webservices.xml.com/pub/a/ws/2001/04/04/webservices/index.html>

# Available Services

---

- Google API
  - <http://www.google.com/apis/>
- Amazon
  - <http://www.amazon.com/gp/browse.html/103-0335014-8818263?node=3435361>
- Web Service Directory
  - <http://xmethods.net/>
