

## Lecture 24: Intellectual Property Issues (Part II)

17 Aug 2006

CSE403, Summer'06, Lecture 24b

Valentin Razmov

## Outline

- n Why Intellectual Property (IP) Protection?
- n Different Types of IP Protection
  - n Patents
  - n Copyrights
  - n Trade secrets
  - n Trademarks
  - n Licenses and Contracts
- n Discussion questions

17 Aug 2006

CSE403, Summer'06, Lecture 24b

Valentin Razmov

## Resources

- n Lecture from csep590tu "Information Technology and Public Policy" (autumn 2004: 09/30)
  - n <http://www.cs.washington.edu/education/courses/csep590/04au/lectures/>
- n Lectures from cse590so "Society and Technology" seminar (spring 2005)
- n SBE workshop as part of the UW Business Plan Competition program (winter 2004)

17 Aug 2006

CSE403, Summer'06, Lecture 24b

Valentin Razmov

## Motivation behind Intellectual Property Protection (reminder)

- n **What:** Protecting intangible assets
- n **Why:** To foster creativity and encourage (technological) progress
- n **How:** By providing **temporary monopoly** as an incentive for creators to do intellectual work for a living
  - n Must be balanced against need to not stifle (shut out) competition completely and for all times

17 Aug 2006

CSE403, Summer'06, Lecture 24b

Valentin Razmov

## Patents (reminder)

- n **Protect:** **inventions** (processes, machines, products, models, improvements, etc.)
  - n **Protected against:** others making, using, selling invention, *even if they independently came up with the same invention*
- n **Excluded:** natural laws and phenomena, abstract ideas
- n **Requirements:** **novel, useful, non-obvious**; must file patent application (generally) before public disclosure
- n **Term:** 20 years from filing
- n **Cost:** relatively high, in both time and money
- n **Problems:**
  - n Patent officers are paid by number of issued patents.
  - n Full disclosure is not enforced.
  - n Overreaching patents effectively lead to monopolies.
  - n Gradual expansion of what is patentable

17 Aug 2006

CSE403, Summer'06, Lecture 24b

Valentin Razmov

## Copyrights

- n **Protect:** **expression of ideas**, *not* the ideas themselves
  - n **Protected against:** reproduction, copy distribution, derivative work creation (*not independent creation* of the same or similar work), public performance and/or display
- n **Excluded:** facts, data
- n **Requirements:** **original work, fixed in tangible form**
- n **Term:** author's life + 70 years
- n **Cost:** simple, no registration
- n **Problems:**
  - n Laws subject to change under pressure from industry.
    - n E.g.: Term length, cost, definition of "fair use" (reverse engineering), "first sale" doctrine, etc.

17 Aug 2006

CSE403, Summer'06, Lecture 24b

Valentin Razmov

## Trade Secrets

- Protect: "... any formula, pattern, design, device, or compilation of information that ... gives [a business] an advantage over competitors who do not know or use it."
  - Protected against: misappropriation
- Excluded: general knowledge, skill, or experience
- Requirements: info not generally known or available, derives economic value from secrecy, must spend reasonable effort to maintain secrecy
- Term: no predefined limit
- Cost: no registration or examination
- Problems:
  - Once lost, the secret can't be regained.

17 Aug 2006

CSE403, Summer'06, Lecture 24b

Valentin Razmov

## Trademarks

- Protect: "any word, name, symbol, or device, or any combination thereof" used to distinguish certain goods from others
  - Protected against: others using the mark, likelihood of confusion and dilution
- Excluded: use in other industries / geographic areas
- Requirements: use the mark in commerce or register with intent to use in future, must maintain quality control over goods
- Term: 10 year renewable (no upper limit)
- Cost: ?

17 Aug 2006

CSE403, Summer'06, Lecture 24b

Valentin Razmov

## Contracts

- Protections, exclusions, requirements, terms, and costs must all be *explicitly* defined as part of the contract.
- Examples:
  - License agreements
    - For software, standard agreements are GPL, BSD, etc.
    - For media, Creative Commons is emerging as an alternative to the default 'All Rights Reserved'.
  - Non-disclosure agreements
  - Employee contracts
    - Including non-competition agreements, pay compensation, etc.
  - Ownership allocations

17 Aug 2006

CSE403, Summer'06, Lecture 24b

Valentin Razmov

## Example: IP Issues with the Use of Third-Party Software

### Important questions to explore early:

- Do you have the right to use the third-party software?
- Is it important to protect some IP you are adding?
- Do the IP rights of the third-party software allow you to do this?

17 Aug 2006

CSE403, Summer'06, Lecture 24b

Valentin Razmov

## Example: Seemingly Easy Questions...

### What do you think?

- Who owns the idea that your team has been developing?
- Is posting an email message from someone else a violation of copyright?

17 Aug 2006

CSE403, Summer'06, Lecture 24b

Valentin Razmov

## "The Devil Is in the Details"

**Advice:** Know and understand the basics but consult with a lawyer for the details.

17 Aug 2006

CSE403, Summer'06, Lecture 24b

Valentin Razmov

# Lessons from the History of Software Development (Part II)

17 Aug 2006

CSE403, Summer'06, Lecture 25

Valentin Razmov

## Outline

- n Is Software Different?
- n Trends from the History of Software Development
  - n Sophistication of skills (of developers and users)
  - n Propagation of good development practices

### Next time:

- n Size of projects and products
- n Criticality of getting it right

17 Aug 2006

CSE403, Summer'06, Lecture 25

Valentin Razmov

## References

- n "Professional Software Development", by Steve McConnell
- n "Crossing the Chasm", by Geoffrey Moore

17 Aug 2006

CSE403, Summer'06, Lecture 25

Valentin Razmov

## Is Software Different? (from Other Engineering Disciplines)

### Arguments in favor:

- n Testing the quality of software is harder
  - n The Halting Problem presents a fundamental limitation in the extent to which software quality can be evaluated
    - n Most properties of software (that we care about) are unverifiable
  - n Unlike bridges and buildings where everything can be tested using known procedures
- n Much higher rate of failure
  - n May also have to do with the immaturity of the discipline
- n Lower barrier to entry
- n Customers have a greater role
- n Customer expectations: for quality, delivery timeline, etc.
- n Frantic rate of technological change
- n Software is easier to copy

17 Aug 2006

CSE403, Summer'06, Lecture 25

Valentin Razmov

## Is Software Different? (from Other Engineering Disciplines)

### Arguments against:

- n Software isn't "soft".
  - n Contrary to popular perception, change cannot be "easily accommodated"
    - n Yet requirements do change.
  - n In reality, even though change is *possible* in principle, accommodating change often forces a rewriting of major parts of the software.
- n Software developers still need to plan, execute, test, and sell their products. Same lifecycle.
- n The discipline is still in its infancy.

17 Aug 2006

CSE403, Summer'06, Lecture 25

Valentin Razmov

## Is Software Different? (from Other Engineering Disciplines)

### More questions to consider:

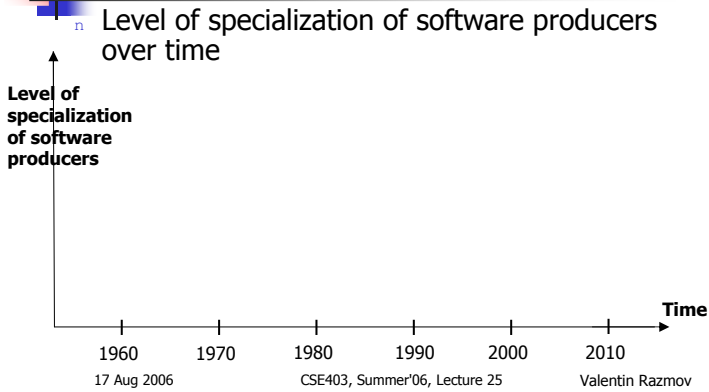

- n Is software less reliable?
- n Does it break differently?
- n Is the environment of use of software different?
- n Is the culture of software development different?
- n and more...

17 Aug 2006

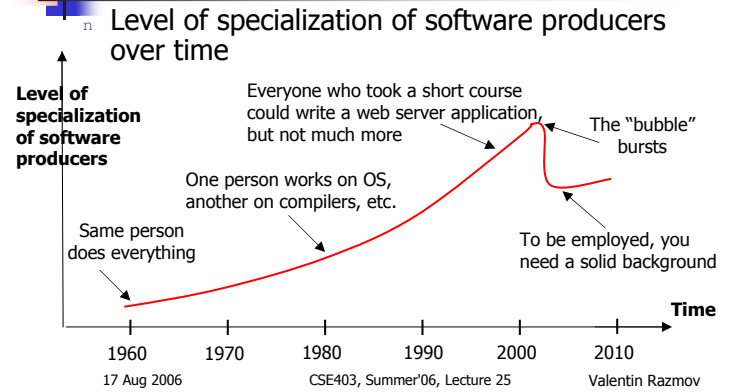

CSE403, Summer'06, Lecture 25

Valentin Razmov

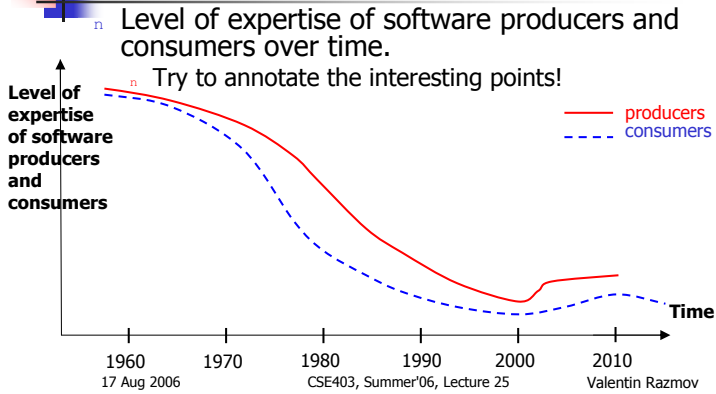

## Lessons from the History: Software Producers' Skills

## Lessons from the History: Software Producers' Skills

## Lessons from the History: Sophistication of Stakeholders

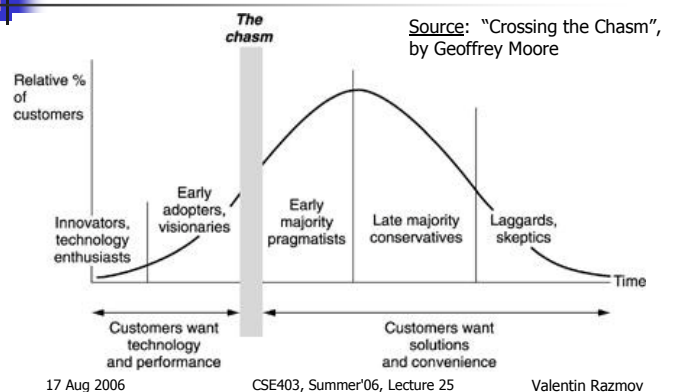

## Lessons from the History: Sophistication of Stakeholders

## Lessons from the History: Software 'Gold Rushes' (reminder)

- n The software 'Gold Rush' fever periods
  - n Goal: being first-to-market in an unclaimed segment
  - n Typical environment: two guys in a garage
  - n High-risk projects, potentially high pay-off
  - n Code-and-fix development, very informal processes
  - n Customers are tech savvy, willing to forgive bugs
- n The in-between (post-'Gold Rush') periods
  - n Goal: sustained, productive competition with others
  - n Typical environment: larger teams, formal processes
  - n Lower-risk, likely lower but more predictable pay-off
  - n Careful, quality-driven development with an emphasis on quality (reliability, interoperability, usability, etc.)
  - n Different customer base: demands reliability

## Lessons from the History: Propagation of Good Practices

## One-Minute Feedback

- n What one or two ideas discussed today captured your attention and thinking the most?
  
- n List any ideas / concepts that you would like to know more about. Be specific.
