CSE417: Review

Larry Ruzzo
Winter 2007

© W.L.Ruzzo & UW CSE 1997-2007

Complexity, I

```
Asymptotic Analysis
Best/average/worst cases
Upper/Lower Bounds
Big O, Theta, Omega
Analysis methods
loops
recurrence relations
common data structures, subroutines
```

Graph Algorithms

Graphs

Representation (edge list/adjacency matrix)

Breadth/depth first search

Bipartitness/2-Colorability

DAGS and topological ordering

Design Paradigms

Oynamic Programming recursive solution, redundant subproblems, few do all in careful order and tabulate Divide & Conquer recursive solution superlinear work balanced subproblems

Examples

Greedy

Interval Scheduling Problems
Huffman Codes

Examples

Dynamic programming

Fibonacci

Making change/Stamps

Weighted Interval Scheduling

RNA

Divide & Conquer

Merge sort

Closest pair of points

Integer multiplication (Karatsuba)

Complexity, II

P vs NP

Big-O and poly vs exponential growth

Definition of NP - hints and verifiers

Example problems from slides, reading & hw

SAT, VertexCover, quadratic Diophantine equations, clique, independent set, TSP, Hamilton cycle, coloring, max cut

 $P \subseteq NP \subseteq Exp$

Definition of (polynomial time) reduction

 $SAT \leq_p VertexCover example (how, why correct, why \leq_p, implications)$

Definition of NP-completeness

2x approximation to Euclidean TSP

Some Typical Questions

- Give O() bound on $17n^*(n-3+logn)$ Give O() bound on some code {for i=1 to n {for j ...}} True/False: If X is O(n^2), then it's rarely more than n^3+14 steps. Give a run time recurrence for a recursive alg, or solve a simple one Simulate any of the algs we've studied Give an alg for problem X, maybe a variant of one we've studied, or prove it's in NP
- Understand parts of correctness proof for an algorithm or reduction Implications of NP-completeness
