

Decision Problems

Decision problem.

- . X is a set of strings.
- . Instance: string s.
- Algorithm A solves problem X: $A(s) = yes \text{ iff } s \in X.$

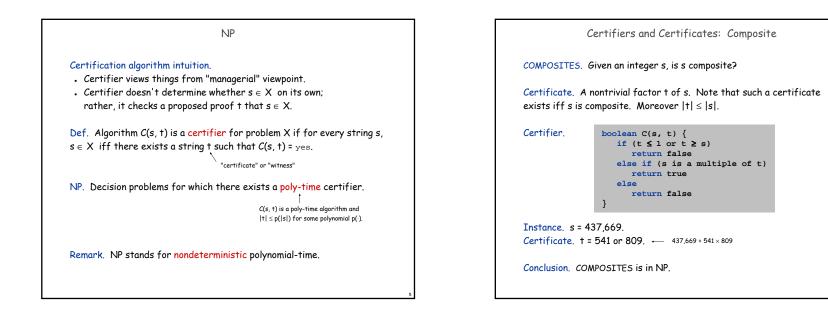

Polynomial time. Algorithm A runs in poly-time if for every string s, A(s) terminates in at most p(|s|) "steps", where $p(\cdot)$ is some polynomial. \uparrow length of s

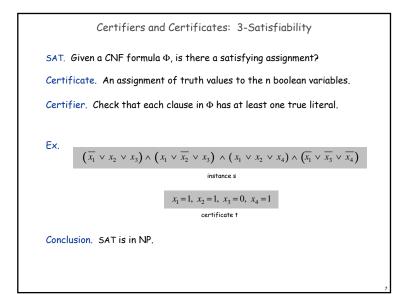

PRIMES: X = { 2, 3, 5, 7, 11, 13, 17, 23, 29, 31, 37, } Algorithm. [Agrawal-Kayal-Saxena, 2002] p(|s|) = |s|⁸.

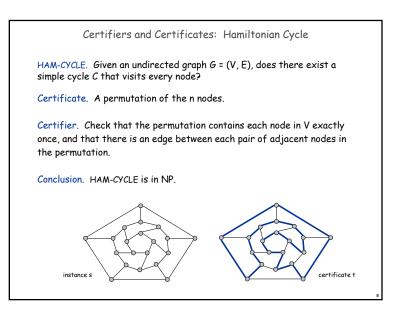

Definition of P

P. Decision problems for which there is a poly-time algorithm.

Problem	Description	Algorithm	Yes	No
MULTIPLE	Is x a multiple of y?	Grade school division	51, 17	51, 16
RELPRIME	Are x and y relatively prime?	Euclid (300 BCE)	34, 39	34, 51
PRIMES	Is × prime?	AKS (2002)	53	51
EDIT- DISTANCE	Is the edit distance between x and y less than 5?	Dynamic programming	niether neither	acgggt ttttta
LSOLVE	Is there a vector x that satisfies Ax = b?	Gauss-Edmonds elimination	$\begin{bmatrix} 0 & 1 & 1 \\ 2 & 4 & -2 \\ 0 & 3 & 15 \end{bmatrix}, \begin{bmatrix} 4 \\ 2 \\ 36 \end{bmatrix}$	$\begin{bmatrix} 1 & 0 & 0 \\ 1 & 1 & 1 \\ 0 & 1 & 1 \end{bmatrix}, \begin{bmatrix} 1 \\ 1 \\ 1 \end{bmatrix}$

P, NP, EXP

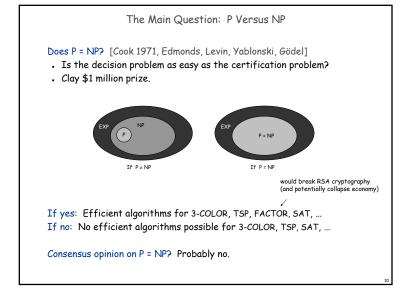

P. Decision problems for which there is a poly-time algorithm.
 EXP. Decision problems for which there is an exponential-time algorithm.
 NP. Decision problems for which there is a poly-time certifier.

Claim. $P \subseteq NP$.

- Pf. Consider any problem X in P.
- By definition, there exists a poly-time algorithm A(s) that solves X.
- Certificate: $t = \varepsilon$, certifier C(s, t) = A(s).

Claim. NP \subseteq EXP.

- Pf. Consider any problem X in NP.
- By definition, there exists a poly-time certifier C(s, t) for X.
- To solve input s, run C(s, t) on all strings t with $|t| \le p(|s|)$.
- Return yes, if C(s, t) returns yes for any of these. •

8.4 NP-Completeness

Polynomial Transformation

Def. Problem X polynomial reduces (Cook) to problem Y if arbitrary instances of problem X can be solved using:

- Polynomial number of standard computational steps, plus
- . Polynomial number of calls to oracle that solves problem Y.

Def. Problem X polynomial transforms (Karp) to problem Y if given any input x to X, we can construct an input y such that x is a yes instance of X iff y is a yes instance of Y.

we require $|\mathbf{y}|$ to be of size polynomial in $|\mathbf{x}|$

Note. Polynomial transformation is polynomial reduction with just one call to oracle for Y, exactly at the end of the algorithm for X. Almost all previous reductions were of this form.

Question. Are these two concepts the same? No, as shown in R.E. Ladner, N. A. Lynch, A. L. Selman: A Comparison of Polynomial Time Reducibilities. Theor. Comput. Sci. 1(2): 103-123 (1975) we abuse notation s_a and blur distinction

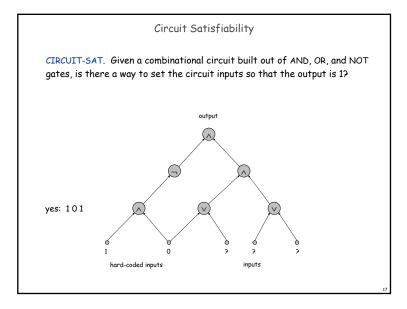

NP-Complete

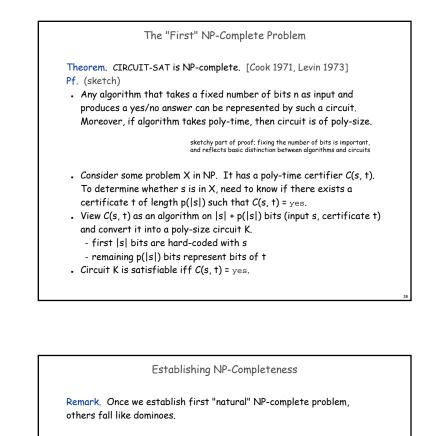

NP-complete. A problem Y in NP with the property that for every problem X in NP, $X \leq_p Y$.

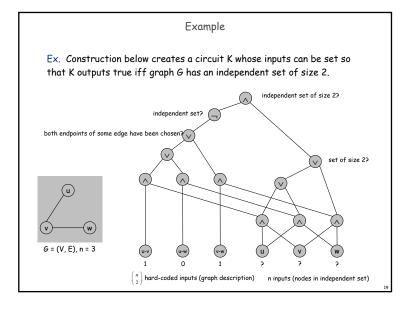

Theorem. Suppose Y is an NP-complete problem. Then Y is solvable in poly-time iff P = NP.

- Pf. \leftarrow If P = NP then Y can be solved in poly-time since Y is in NP.
- Pf. \Rightarrow Suppose Y can be solved in poly-time.
- Let X be any problem in NP. Since $X \leq_p Y$, we can solve X in poly-time. This implies NP \subseteq P.
- . We already know P $\,\subseteq\,$ NP. Thus P = NP. $\,\bullet\,$

Fundamental question. Do there exist "natural" NP-complete problems?

Recipe to establish NP-completeness of problem Y.

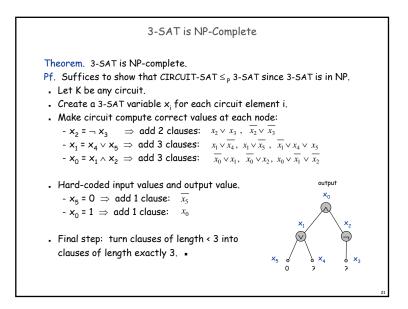

- . Step 1. Show that Y is in NP.
- Step 2. Choose an NP-complete problem X.
- Step 3. Prove that $X \leq_p Y$.

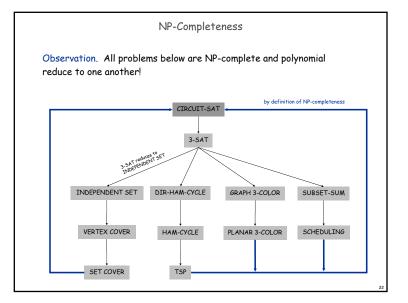

Justification. If X is an NP-complete problem, and Y is a problem in NP with the property that $X \leq_p Y$ then Y is NP-complete.

by definition of by assumption

NP-complete

- Pf. Let W be any problem in NP. Then $W \leq_{P} X \leq_{P} Y$.
- By transitivity, W ≤_P Y.
- Hence Y is NP-complete.

Some NP-Complete Problems

Six basic genres of NP-complete problems and paradigmatic examples.

- Packing problems: SET-PACKING, INDEPENDENT SET.
- . Covering problems: SET-COVER, VERTEX-COVER.
- . Constraint satisfaction problems: SAT, 3-SAT.
- . Sequencing problems: HAMILTONIAN-CYCLE, TSP.
- . Partitioning problems: 3D-MATCHING 3-COLOR.
- . Numerical problems: SUBSET-SUM, KNAPSACK.

Practice. Most NP problems are either known to be in P or NP-complete.

Notable exceptions. Factoring, graph isomorphism, Nash equilibrium.

Extent and Impact of NP-Completeness

Extent of NP-completeness. [Papadimitriou 1995]

- . Prime intellectual export of CS to other disciplines.
- 6,000 citations per year (title, abstract, keywords).
 more than "compiler", "operating system", "database"
- . Broad applicability and classification power.
- "Captures vast domains of computational, scientific, mathematical endeavors, and seems to roughly delimit what mathematicians and scientists had been aspiring to compute feasibly."

NP-completeness can guide scientific inquiry.

- . 1926: Ising introduces simple model for phase transitions.
- . 1944: Onsager solves 2D case in tour de force.
- . 19xx: Feynman and other top minds seek 3D solution.
- . 2000: Istrail proves 3D problem NP-complete.

More Hard Computational Problems

Aerospace engineering: optimal mesh partitioning for finite elements. Biology: protein folding. Chemical engineering: heat exchanger network synthesis. Civil engineering: equilibrium of urban traffic flow. Economics: computation of arbitrage in financial markets with friction. Electrical engineering: VLSI layout. Environmental engineering: optimal placement of contaminant sensors. Financial engineering: find minimum risk portfolio of given return. Game theory: find Nash equilibrium that maximizes social welfare. Genomics: phylogeny reconstruction. Mechanical engineering: structure of turbulence in sheared flows. Medicine: reconstructing 3-D shape from biplane angiocardiogram. Operations research: optimal resource allocation. Physics: partition function of 3-D Ising model in statistical mechanics. Politics: Shapley-Shubik voting power. Pop culture: Minesweeper consistency. Statistics: optimal experimental design.

8.9 co-NP and the Asymmetry of NP

Asymmetry of NP

Asymmetry of NP. We only need to have short proofs of yes instances.

Ex 1. SAT vs. TAUTOLOGY.

- . Can prove a CNF formula is satisfiable by giving such an assignment.
- How could we prove that a formula is not satisfiable?

Ex 2. HAM-CYCLE vs. NO-HAM-CYCLE.

- Can prove a graph is Hamiltonian by giving such a Hamiltonian cycle.
- . How could we prove that a graph is not Hamiltonian?

Remark. SAT is NP-complete and SAT \equiv_{p} TAUTOLOGY, but how do we classify TAUTOLOGY?

not even known to be in NP

NP and co-NP

NP. Decision problems for which there is a poly-time certifier. Ex. SAT, HAM-CYCLE, COMPOSITES.

Def. Given a decision problem X, its complement X is the same problem with the y_{PS} and n_0 answers reverse.

Ex. X = { 0, 1, 4, 6, 8, 9, 10, 12, 14, 15, ... } X = { 2, 3, 5, 7, 11, 13, 17, 23, 29, ... }

co-NP. Complements of decision problems in NP. Ex. TAUTOLOGY, NO-HAM-CYCLE, PRIMES.

NP = co-NP ?

Fundamental question. Does NP = co-NP?

- . Do $_{\rm Yes}$ instances have succinct certificates iff ${\tt no}$ instances do?
- . Consensus opinion: no.

Theorem. If NP \neq co-NP, then P \neq NP.

Pf idea.

- P is closed under complementation.
- . If P = NP, then NP is closed under complementation.
- In other words, NP = co-NP.
- . This is the contrapositive of the theorem.

Good Characterizations Good characterization. [Edmonds 1965] NP ∩ co-NP. • If problem X is in both NP and co-NP, then: - for yes instance, there is a succinct certificate - for no instance, there is a succinct disqualifier • Provides conceptual leverage for reasoning about a problem.

- $\ensuremath{\mathsf{Ex.}}$ Given a bipartite graph, is there a perfect matching.
- If yes, can exhibit a perfect matching.
- If no, can exhibit a set of nodes S such that |N(S)| < |S|.

Good Characterizations

Observation. $P \subseteq NP \cap co-NP$.

- Proof of max-flow min-cut theorem led to stronger result that maxflow and min-cut are in P.
- Sometimes finding a good characterization seems easier than finding an efficient algorithm.

Fundamental open question. Does $P = NP \cap co-NP$?

- Mixed opinions.
- Many examples where problem found to have a non-trivial good characterization, but only years later discovered to be in P.
 - linear programming [Khachiyan, 1979]
 - primality testing [Agrawal-Kayal-Saxena, 2002]

Fact. Factoring is in NP \cap co-NP, but not known to be in P.

if poly-time algorithm for factoring, can break RSA cryptosystem

PRIMES is in NP \cap co-NP Theorem. PRIMES is in NP \cap co-NP. Pf. We already know that PRIMES is in co-NP, so it suffices to prove that PRIMES is in NP. Pratt's Theorem. An odd integer s is prime iff there exists an integer 1 < t < s s.t. $t^{s-1} \equiv 1 \pmod{s}$ $t^{(s-1)/p} \neq 1 \pmod{s}$ for all prime divisors p of s-1 **Input**, *s* = 437,677 Certifier. Certificate. $t = 17, 2^2 \times 3 \times 36,473$ - Check s-1 = $2 \times 2 \times 3 \times 36.473$. - Check 17^{s-1} = 1 (mod s). - Check $17^{(s-1)/2} \equiv 437,676 \pmod{s}$. prime factorization of s-1 also need a recursive certificate to assert that 3 and 36,473 are prime - Check $17^{(s-1)/3} \equiv 329,415 \pmod{s}$. - Check $17^{(s-1)/36,473} \equiv 305,452 \pmod{s}$. use repeated squaring

FACTOR is in NP \cap co-NP

FACTORIZE. Given an integer x, find its prime factorization. FACTOR. Given two integers x and y, does x have a nontrivial factor less than y?

Theorem. FACTOR = $_{P}$ FACTORIZE.

Theorem. FACTOR is in NP \cap co-NP. Pf.

- Certificate: a factor p of x that is less than y.
- Disqualifier: the prime factorization of x (where each prime factor is greater than or equal to y), along with a certificate that each factor is prime.

Primality Testing and Factoring

We established: $PRIMES \leq_{p} COMPOSITES \leq_{p} FACTOR.$

Natural question: Does FACTOR \leq_{p} PRIMES ? Consensus opinion. No.

State-of-the-art.

- PRIMES is in P. ← proved in 2001
- FACTOR not believed to be in P.

RSA cryptosystem.

- . Based on dichotomy between complexity of two problems.
- To use RSA, must generate large primes efficiently.
- To break RSA, suffixes to find efficient factoring algorithm.
