

BCNF and JDBC

CSE 444 section, July 8, 2010

Today

- BCNF decompositions
- JDBC for project 2

What is BCNF?

A relation R is in BCNF if:

If $A_1, \dots, A_n \rightarrow B$ is a non-trivial dependency in R, then $\{A_1, \dots, A_n\}$ is a superkey for R

Why do BCNF decompositions?

BCNF decomposition algorithm

BCNF_Decompose(R)

find X s.t.: $X \neq X^+ \neq$ [all attributes]

if (not found) **then** “R is in BCNF”

let $Y = X^+ - X$

let $Z =$ [all attributes] $- X^+$

decompose R into $R_1(X \cup Y)$ and $R_2(X \cup Z)$

continue to decompose recursively R_1 and R_2

BCNF example: table R(A, B, C, D, E)

Consider the following FDs:

- $CD \rightarrow E$ **BAD**
- $D \rightarrow B$ **BAD**
- $A \rightarrow CD$

Which one are
the bad
dependences?

$CD^+ = BCDE$

CD is not a
superkey

$D^+ = BD$

D is not a superkey

$A^+ = ABCDE$

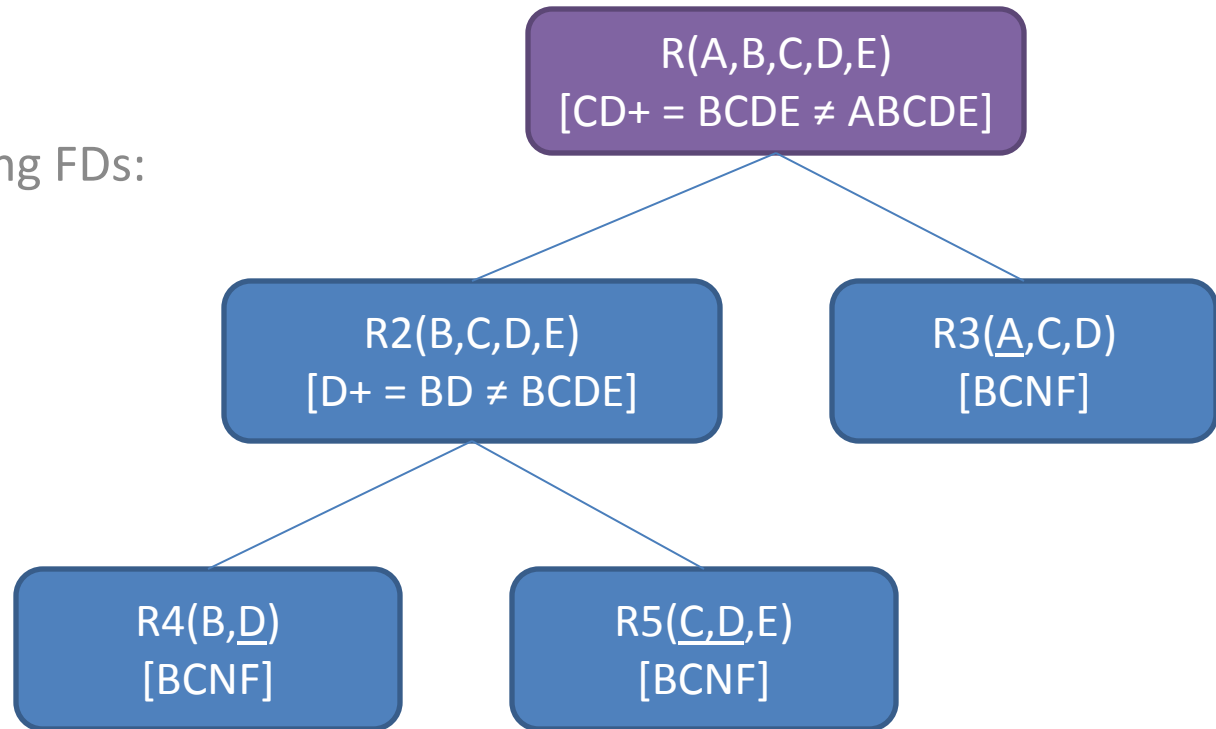

A is a superkey

Note: a set of attributes X is a superkey if $X^+ = ABCDE$

BCNF example: table R(A, B, C, D, E)

Consider the following FDs:

- $CD \rightarrow E$ **BAD**
- $D \rightarrow B$ **BAD**
- $A \rightarrow CD$

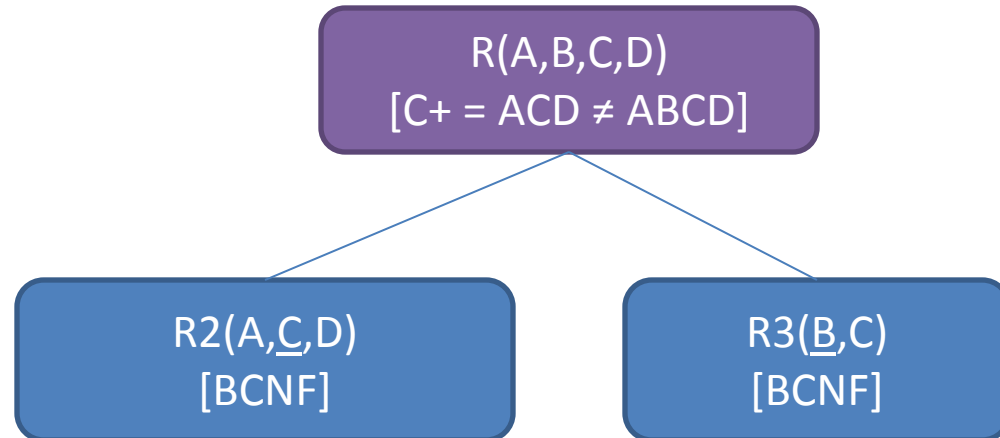

Note: a set of attributes X is a superkey if $X^+ = ABCDE$

Another example: R(A,B,C,D)

Consider the following FDs:

- $C \rightarrow D$, $C^+ = ACD$ **BAD**
- $C \rightarrow A$, $C^+ = ACD$ **BAD**
- $B \rightarrow C$, $B^+ = ABCD$

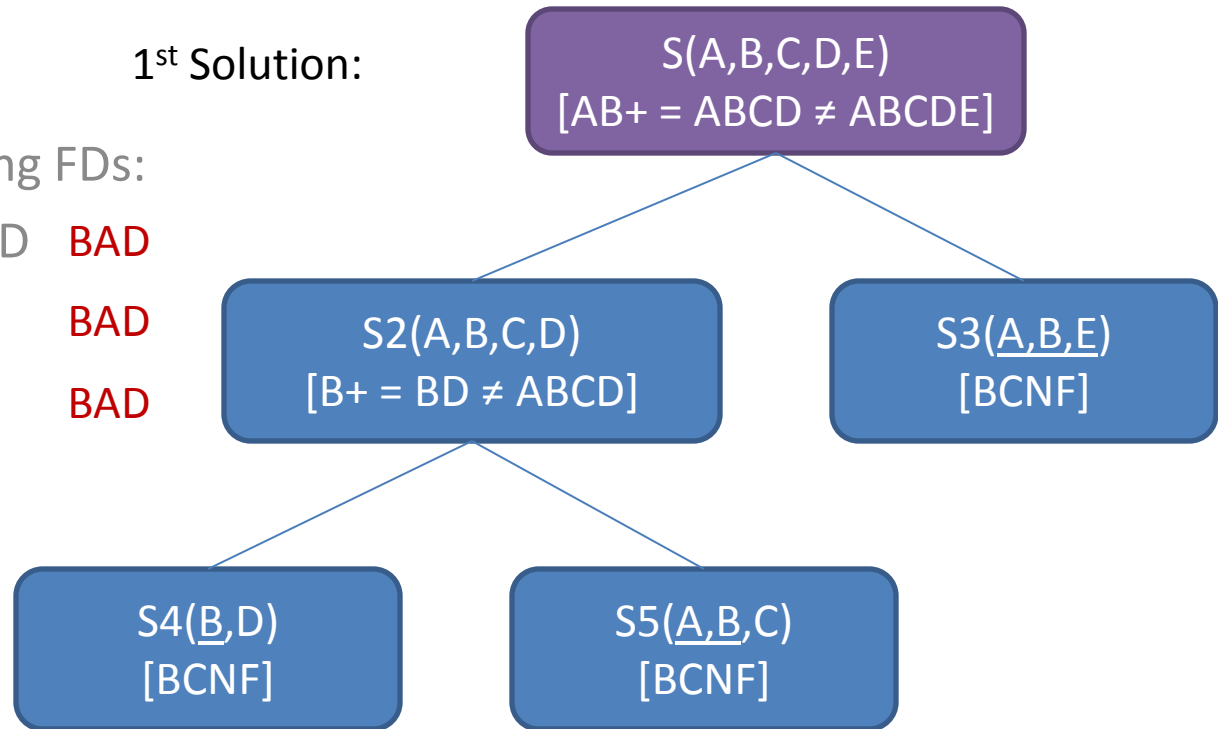

Note: a set of attributes X is a superkey if $X^+ = ABCD$

A third example: $S(A,B,C,D,E)$

1st Solution:

Consider the following FDs:

- $AB \rightarrow C$, $AB^+ = ABCD$ **BAD**
- $DE \rightarrow C$, $DE^+ = CDE$ **BAD**
- $B \rightarrow D$, $B^+ = BD$ **BAD**

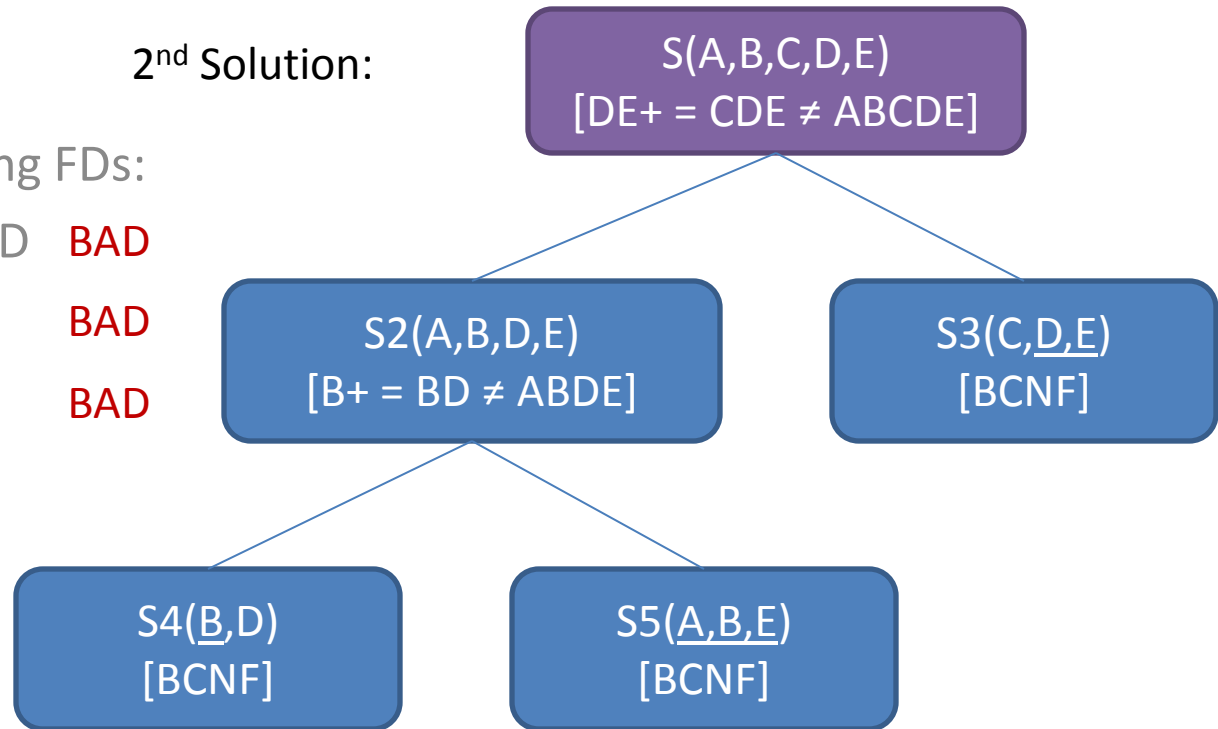

Note: a set of attributes X is a superkey if $X^+ = ABCDE$

A third example: $S(A,B,C,D,E)$

2nd Solution:

Consider the following FDs:

- $AB \rightarrow C$, $AB^+ = ABCD$ **BAD**
- $DE \rightarrow C$, $DE^+ = CDE$ **BAD**
- $B \rightarrow D$, $B^+ = BD$ **BAD**

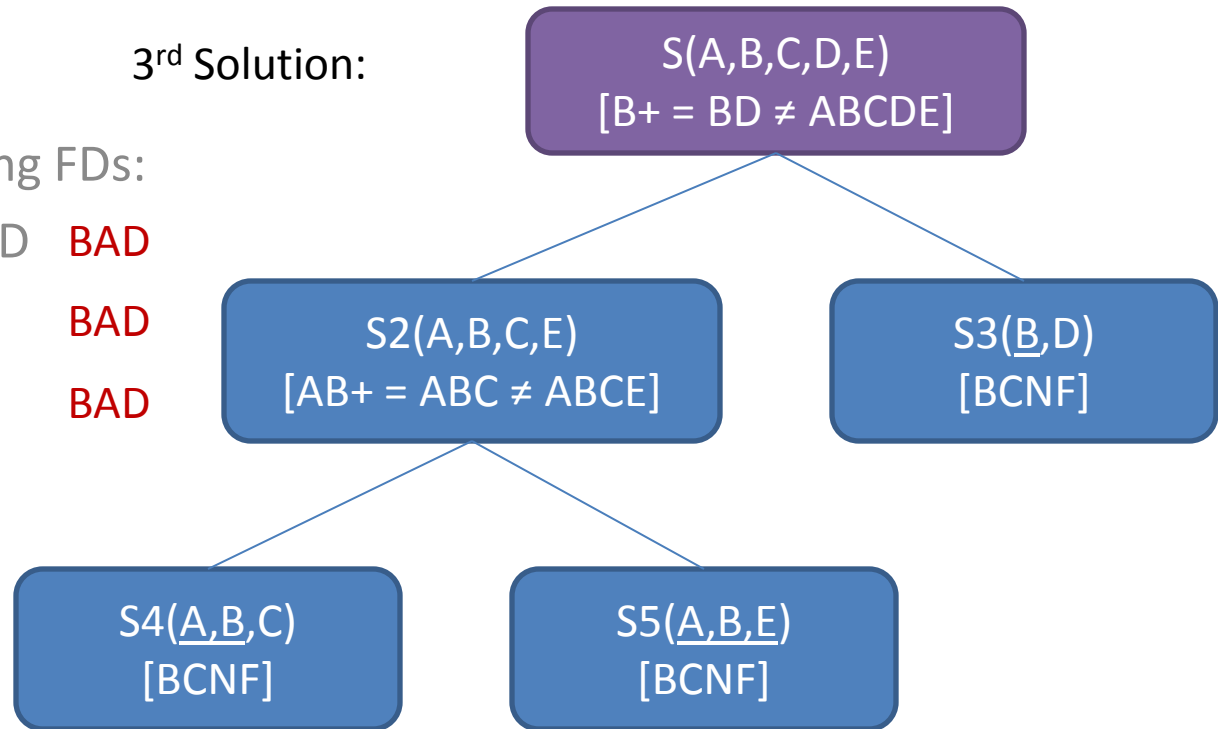

Note: a set of attributes X is a superkey if $X^+ = ABCDE$

A third example: $S(A,B,C,D,E)$

3rd Solution:

Consider the following FDs:

- $AB \rightarrow C$, $AB^+ = ABCD$ **BAD**
- $DE \rightarrow C$, $DE^+ = CDE$ **BAD**
- $B \rightarrow D$, $B^+ = BD$ **BAD**

Note: a set of attributes X is a superkey if $X^+ = ABCDE$

A table with “real” data

JobInterviews

CandID	Date	Time	EmpID	RoomNo
C21	16-April-09	9.30 AM	E211	CSE550
C21	17-April-09	11.00 AM	E211	CSE550
C5	16-April-09	11.00 AM	E51	CSE218
C2	1-May-09	9.30 AM	E211	CSE218

Note: a set of attributes X is a superkey if $X^+ = \text{all attributes}$

A table with “real” data

JobInterviews

CandID	Date	Time	EmpID	RoomNo
C21	16-April-09	9.30 AM	E211	CSE550
C21	17-April-09	11.00 AM	E211	CSE550
C5	16-April-09	11.00 AM	E51	CSE218
C2	1-May-09	9.30 AM	E211	CSE218

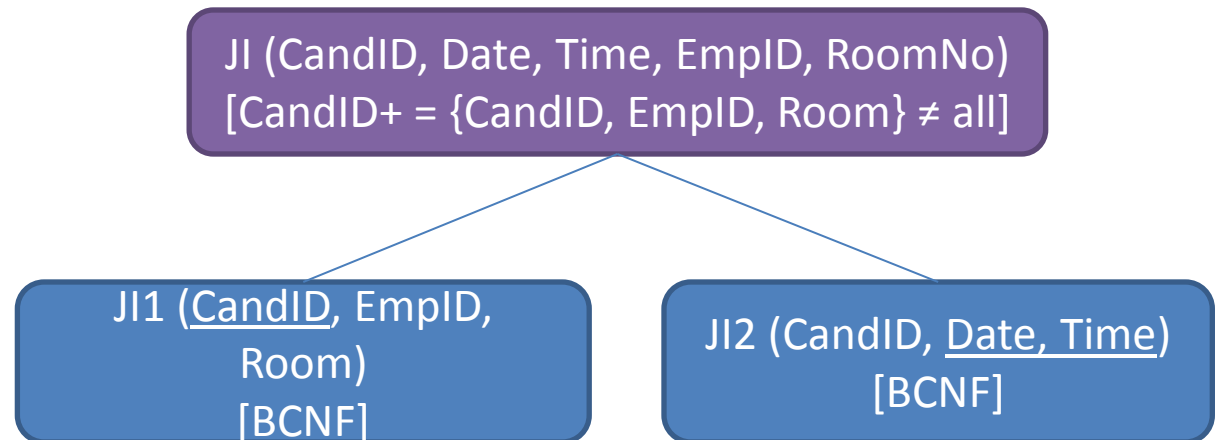

What are the FDs?

- CandID → EmpID, Room **BAD**
- Date, Time → CandID, EmpID, RoomNo
- Date, EmpID → CandID, Time, RoomNo
- more?

Note: a set of attributes X is a superkey if $X^+ = \text{all attributes}$

A table with “real” data

JobInterviews (CandID, Date, Time, EmpID, RoomNo)

What are the FDs?

- CandID \rightarrow EmpID, Room **BAD**
- Date, Time \rightarrow CandID, EmpID, RoomNo
- Date, EmpID \rightarrow CandID, Time, RoomNo
- more?

Note: a set of attributes X is a superkey if $X^+ = \text{all attributes}$

Today

- BCNF decompositions
- JDBC for project 2

JDBC (Java Database Connectivity)

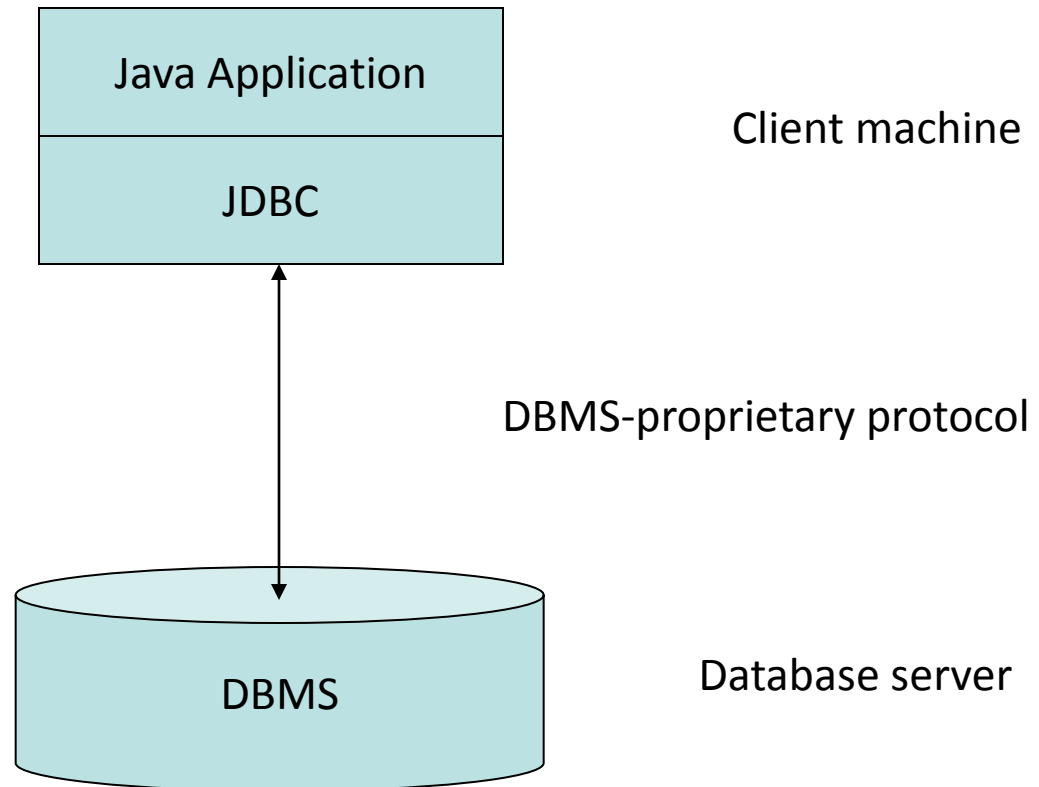

A Java API to access a database:

- connect to a data source
- send queries and update statements
- retrieve and process results

Documentation:

http://java.sun.com/javase/6/docs/technote_s/guides/jdbc/

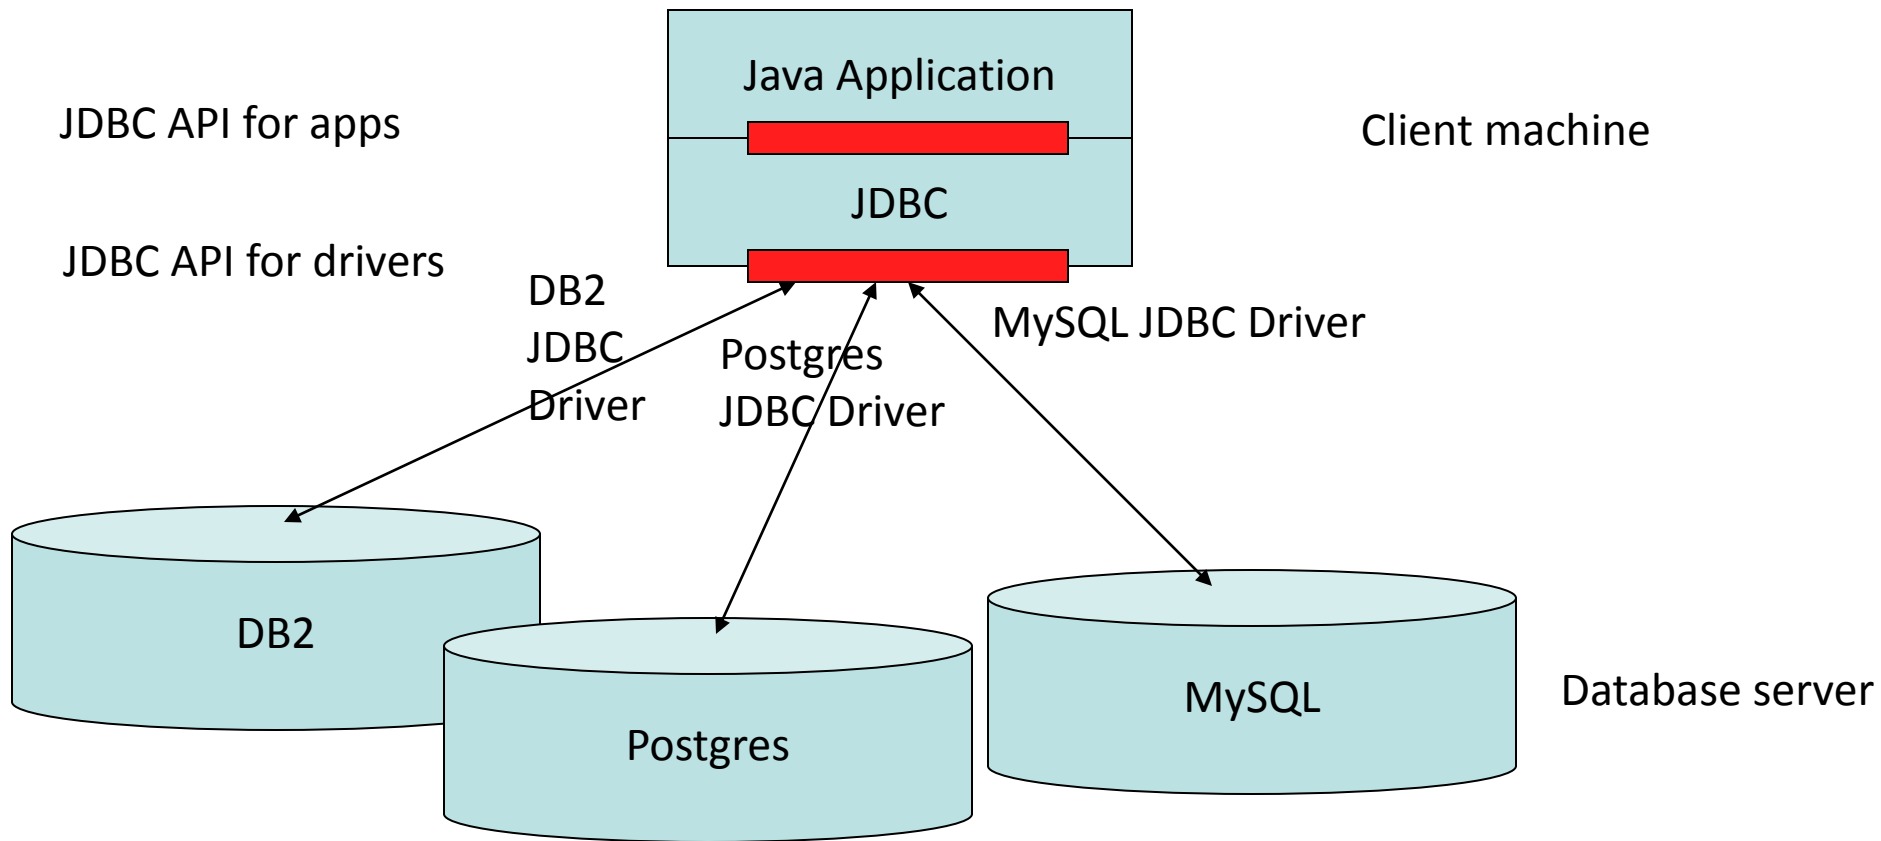

JDBC lets Java talk to your database

DBMS vendors make JDBC drivers...

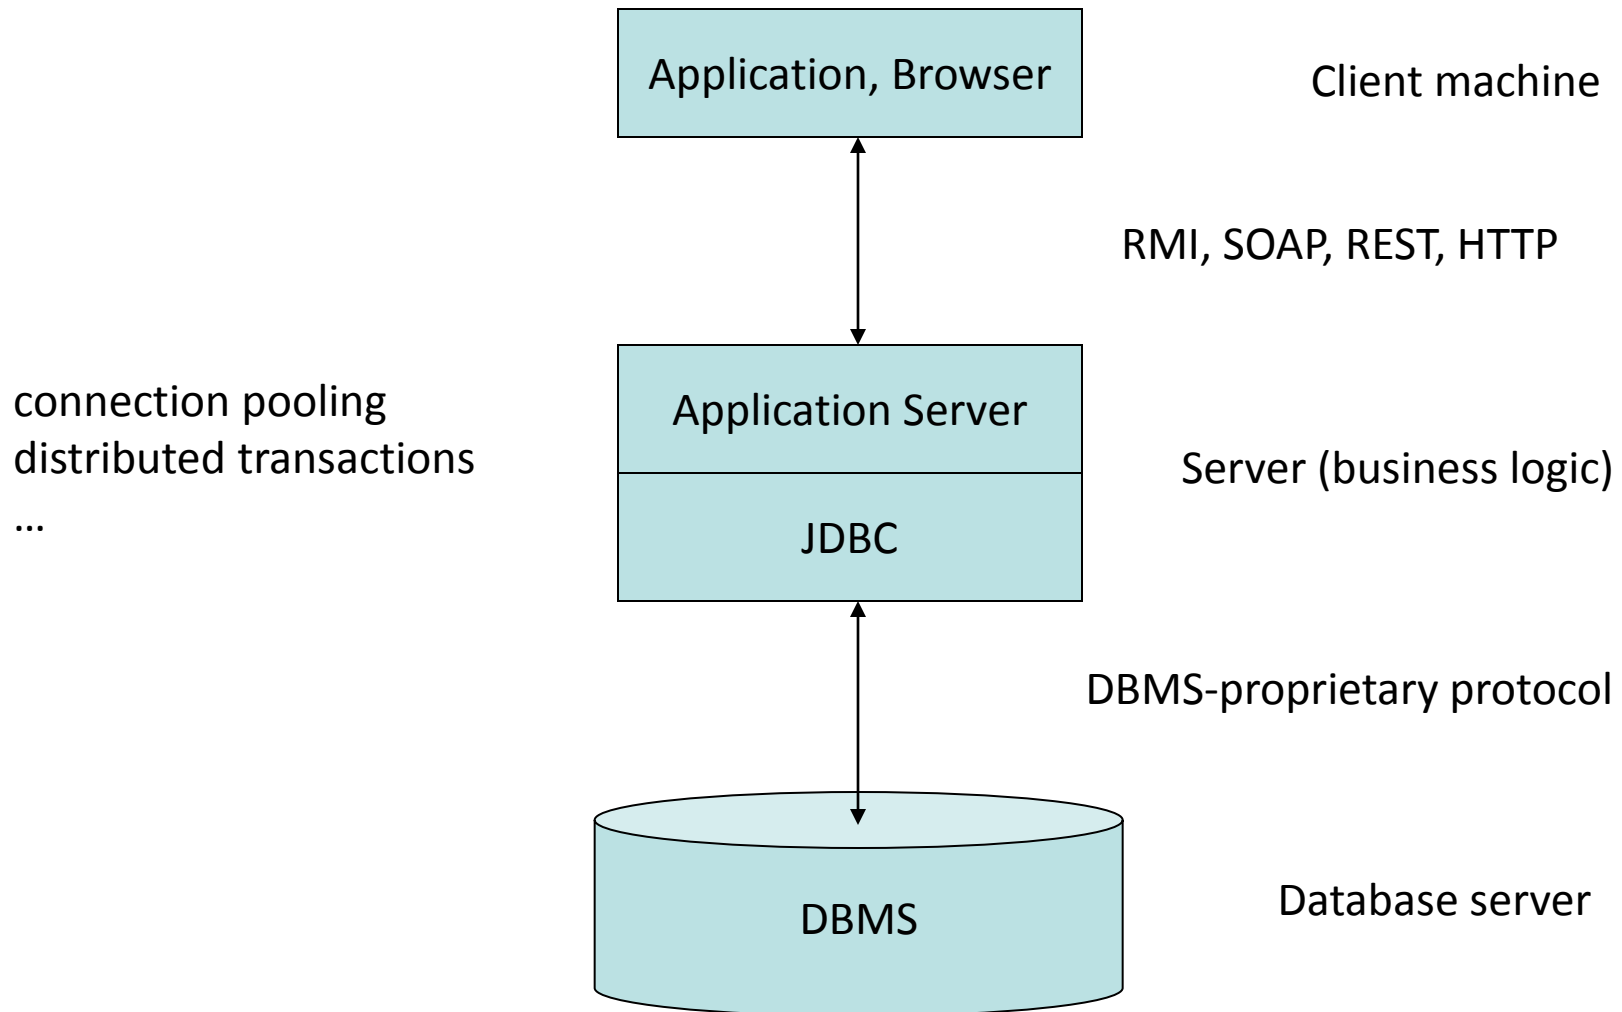

... letting JDBC talk to *any* database

JDBC architecture

Three-tier model

First, load the driver

- For Project 2, look in project2.tar.gz
 - SQL Server driver
sqljdbc4.jar
 - PostgreSQL driver
postgresql-8.4-701.jdbc4.jar
 - Already installed on Lab PCs (use 444shell.cmd)
- Put on class path, then tell Java to load it
Class.forName
("com.microsoft.sqlserver.jdbc.SQLServerDriver");
Class.forName ("org.postgresql.Driver");
 - Class.forName() optional in current versions of Java

JDBC example

```
Connection con = DriverManager.getConnection  
    ("jdbc:sqlserver://iisqlsrv;database=imdb",  
     "username", "password");
```

```
Statement stmt = con.createStatement();
```

```
ResultSet rs = stmt.executeQuery  
    ("SELECT a, b, c FROM Table1");
```

```
while (rs.next()) {  
    int x = rs.getInt("a");  
    String s = rs.getString("b");  
    float f = rs.getFloat("c");  
}
```

Modifying the database

Use `Statement.executeUpdate()`:

```
Statement stmt = con.createStatement();

int rowsUpdated = stmt.executeUpdate (
    "UPDATE Actor " +
    "SET gender = 'F' " +
    "WHERE gender IS NULL"
);
```

- Works with any database modification, not just UPDATE
- Warning – will throw if you run it with a query!

Close all JDBC objects when done

```
Connection con = DriverManager.getConnection(...);  
Statement stmt = con.createStatement();  
ResultSet rs = stmt.executeQuery  
    ("SELECT a, b, c FROM Table1");
```

```
// do work with rs...
```

```
rs.close();  
stmt.close();  
con.close();
```

```
Class.forName
    ("com.microsoft.sqlserver.jdbc.SQLServerDriver");

Connection con = null;

try {
    con = DriverManager.getConnection( ... );

    ...

} catch (Exception e) {
    e.printStackTrace();
} finally {
    con.close();
}
```

Parameterized queries - PreparedStatement

```
PreparedStatement pstmt = con.prepareStatement  
    ("SELECT lname FROM persons WHERE id = ? ");
```

...

```
pstmt.setInt(1, 34);  
ResultSet rs1 = pstmt.executeQuery();
```

...

```
pstmt.setInt(1, 63);  
ResultSet rs2 = pstmt.executeQuery();
```

...

Parameterized queries - PreparedStatement

No need to worry about quotes ' , "

```
PreparedStatement pstmt = con.prepareStatement  
    ("SELECT website FROM shops  
     WHERE name = ? OR owner = ? ");
```

...

```
pstmt.setString(1, "George's");  
pstmt.setString(2, "Oh \"wow\"!");
```

...

Parameterized queries - PreparedStatement

No need to worry about quotes ' , "

```
PreparedStatement pstmt = con.prepareStatement  
    ("SELECT website FROM shops  
     WHERE name = ? OR owner = ? ");
```

...

```
pstmt.setString(1, "George's"); ← Single quotes without escaping!  
pstmt.setString(2, "Oh \"wow\"!"); ← Parameterizing lets plan be cached
```

...

```
Statement stmt = con.createStatement();  
ResultSet rs = stmt.executeQuery  
    ("SELECT website FROM shops  
     WHERE name = 'George\'s' OR ...");
```

Must escape single quotes.
What if this came from user?

Transactions

- A transaction is a logical group of SQL statements
- Each transaction is guaranteed to execute *as if* it was the only code running on the database
- We will talk more about them in lecture

Transactions in JDBC – option 1

Execute the SQL code to start, end transactions:

```
PreparedStatement pBeginTx    =
    con.prepareStatement("BEGIN TRANSACTION");
PreparedStatement pCommitTx  =
    con.prepareStatement("COMMIT TRANSACTION");
PreparedStatement pRollbackTx =
    con.prepareStatement("ROLLBACK TRANSACTION");
...
pBeginTx.executeUpdate();
// transaction started
...

if (ok) pCommitTx.executeUpdate();
else pRollbackTx.executeUpdate();
// transaction finished or reverted
```

Transactions in JDBC – option 2

Use JDBC methods to work with transactions:

```
con.setAutoCommit(false);  
// From now on, everything is in a transaction  
...  
  
if (ok) con.commit();  
else con.rollback();  
// Old transaction done/reverted, new one started  
...  
  
con.setAutoCommit(true);  
// Now each statement executes by itself again
```
