“We Provide a Working Crawler”

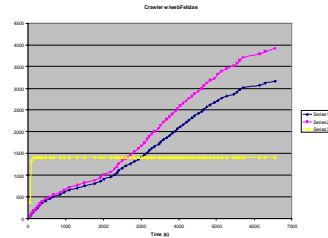

## RMateys In Action

The screenshot shows the RMateys web interface. On the left is a search form with fields for 'Search', 'Advanced Search', 'URL Scan Test', 'Cache', 'MP3 Index', and 'Host Rank'. On the right is a terminal window displaying log output from the crawler. Below the search form is a search result for 'Rimateys Artist Index: Z' with a table of results.

URL	Artist	Year	Album	Genre
http://www.rimateys.com/artist/2/001/	001	2001	001	001
http://www.rimateys.com/artist/2/002/	002	2002	002	002
http://www.rimateys.com/artist/2/003/	003	2003	003	003

## Sample Crawl—Selected Results

## Mistakes We Made

- Building an inefficient crawler in the hope of redeeming it component-wise over the course of the quarter.
- Not devoting more time toward increasing the focus of our crawler.
- Failing to remedy the inaccuracy and idiosyncrasy of our MP3 meta-data resolution component.
