

	Branch Prediction Buffer	
Branch predictio	n buffer (BPB)	
	ory indexed by the lower bits of the address of a brand during the <b>fetch</b> stage	ch
	1-bit prediction the last branch to index to this BPB location took)	
<ul> <li>do what the</li> </ul>	e prediction says to do	
<ul> <li>if the prediction</li> </ul>	ction is taken & it is correct	
<ul> <li>only ind</li> </ul>	cur a one-cycle penalty (in our 5-stage pipeline)– why	?
<ul> <li>if the prediction</li> </ul>	ction is not taken & it is correct	
• incur n	o penalty – why?	
<ul> <li>if the prediction</li> </ul>	ction is <b>incorrect</b>	
change	e the prediction	
<ul> <li>also flu</li> </ul>	sh the pipeline	
<ul> <li>penalty</li> </ul>	is the same as if there were no branch prediction	
Spring 2014	CSE 471 - Dynamic Branch	4
oping 2014	Prediction	4

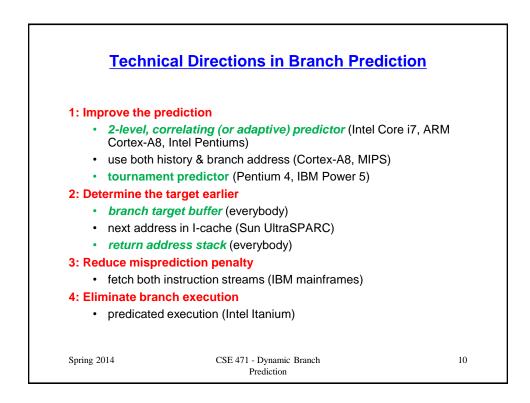

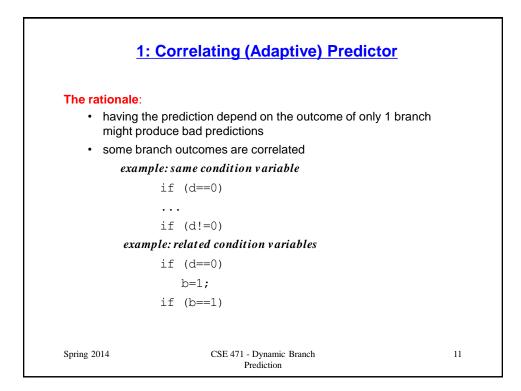

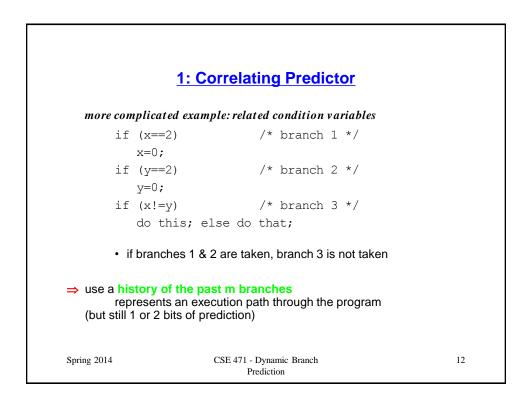

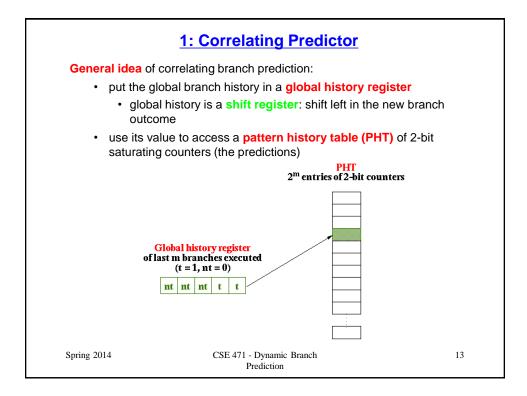

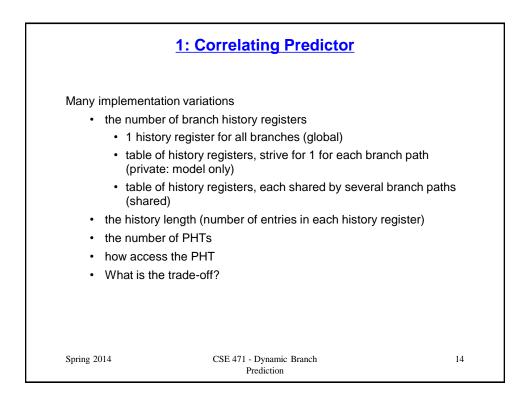

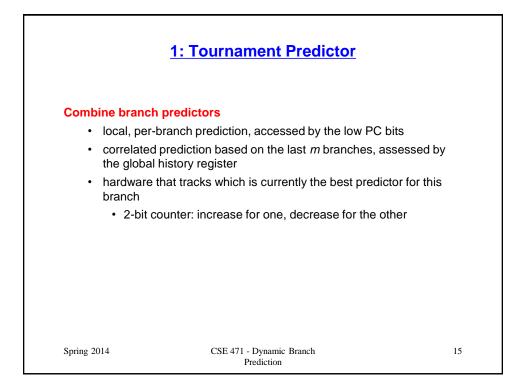

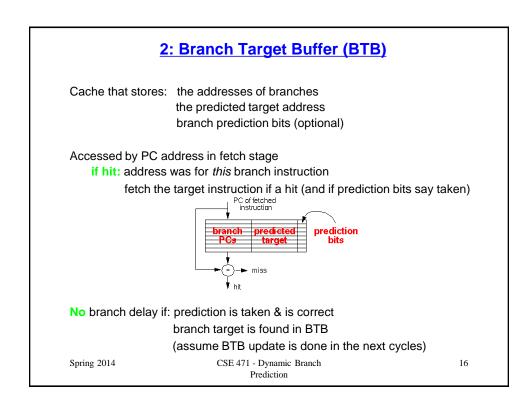

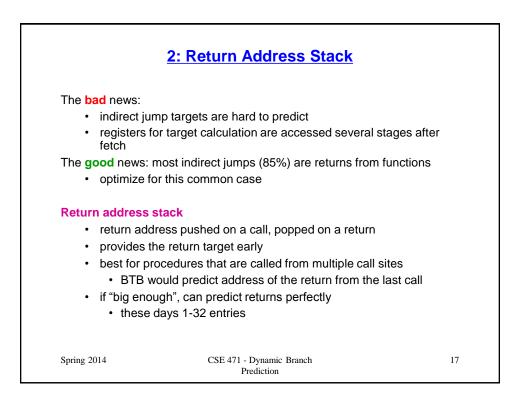

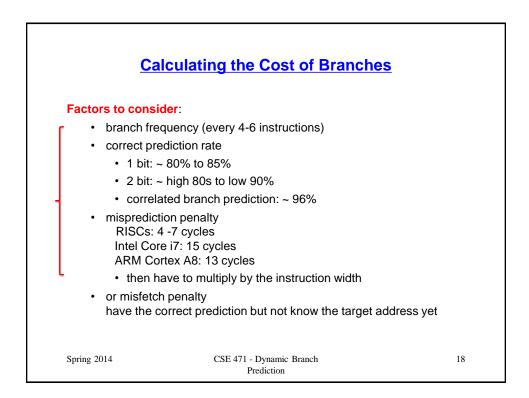

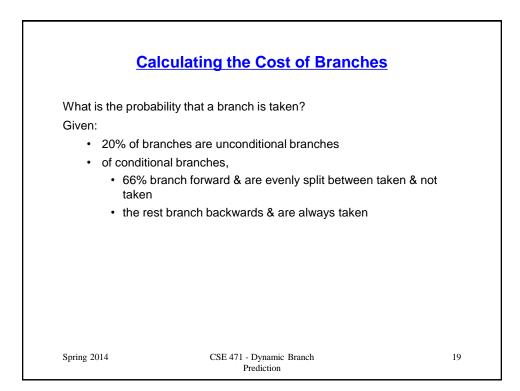

What is t	he contributio	n to CPI of conditional branch st	alls, given:	
• 1	5% branch fre	quency	-	
• a	BTB for cond	itional branches only with a		
	• 10% miss r	ate		
	• 3-cycle mis	s penalty		
• b	ranch predictio	on hardware		
	<ul> <li>92% predic</li> </ul>	tion accuracy		
	•	tion accuracy prediction penalty		
• b	•			1
• b BTB result	• 7 cycle mis		Penalty (cycles)	Stall
	• 7 cycle mis ase CPI is 1	prediction penalty	Penalty (cycles)	<b>Stall</b> .045
BTB result	<ul> <li>7 cycle mis ase CPI is 1</li> <li>Prediction</li> </ul>	prediction penalty Frequency (per instruction)	,	
BTB result	• 7 cycle mis ase CPI is 1 Prediction	Frequency (per instruction) .15 * .10 = .015	3	.045
BTB result miss hit hit	• 7 cycle mis ase CPI is 1 Prediction  correct	Frequency (per instruction)           .15 * .10 = .015           .15 * .90 * .92 = .124	3 0	.045 0
