Chainsaw Problem Statement

Problem Statement

Problem Statement

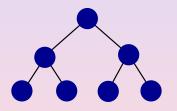

Design an overlay multicast system that:

- Delivers high bandwidth
- Supports a large number of simultaneous users
- Incurs little or no packet loss
- Minimizes duplication of data
- Is robust to large-scale node failure

• • = • • = •

System Architecture State Maintenance Protocol Request Strategy

Request Strategy

Which packet to request?

Question: Given the list of packets a neighbor has that you're interested in, which do you request?

(a)

System Architecture State Maintenance Protocol Request Strategy

Request Strategy

Which packet to request?

Question: Given the list of packets a neighbor has that you're interested in, which do you request?

Potential Choices:

- Random
 - Some packets may not get picked from the seed for a long time

(日) (同) (三) (三)

System Architecture State Maintenance Protocol Request Strategy

Request Strategy

Which packet to request?

Question: Given the list of packets a neighbor has that you're interested in, which do you request?

Potential Choices:

Random

• Some packets may not get picked from the seed for a long time

- Rarest First
 - Biases all nodes towards same set of packets

(日) (同) (三) (三)

System Architecture State Maintenance Protocol Request Strategy

Request Strategy

Which packet to request?

Question: Given the list of packets a neighbor has that you're interested in, which do you request?

Potential Choices:

- Random
 - Some packets may not get picked from the seed for a long time
- Rarest First
 - Biases all nodes towards same set of packets
- Earliest First
 - Biases all nodes towards same set of packets
 - Increases delay by not picking new packets

(日) (同) (三) (三)

System Architecture State Maintenance Protocol Request Strategy

Request Strategy

Successful Strategy

Nodes use random strategy, seed is smarter. If the seed has unsent packets and it receives a request for a previously sent packet, it answers the request with an unsent packet instead.

Chainsaw scales to 10,000 nodes

Claim

• Chainsaw consistently delivers high bandwidth to a large number of nodes

Simulator Setup

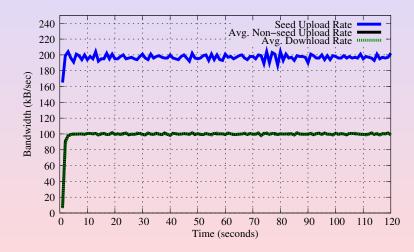

- Stream: 100 kB/sec with 1000 byte packets
- 10,000 node graph with minimum degree 30
- Seed capacity: 200 kB/sec
- Non-seed capacity: 120 kB/sec
- Round-trip time between nodes: 50 ms
- Buffer size: 500 packets (5 sec)

3

Low Startup Delay

Claim

• A new node can start downloading quickly

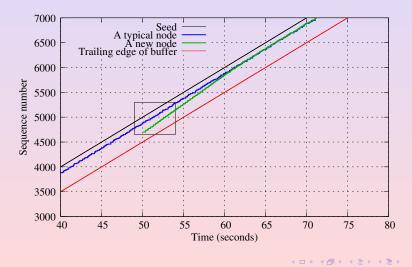

Simulator Setup

- Basic setup identical to previous experiment
- One node started 50sec later than the rest
- Startup strategy:
 - Begin requesting 3 sec old pieces
 - Request sequentially

Scalability No Packet Loss **Startup Delay** Comparison to Bullet and Splitstream DVD Streaming Over Planetlab

Real-world Comparison to Bullet and Splitstream

Experimental Setup

- Implemented Chainsaw using Macedon
- Macedon includes implementations of Bullet and Splitstream
- Ran trials on 174 Planetlab nodes
- Stream rate: 75 kB/sec
- 50% nodes terminated after 3 min to simulate failure

Limitation of Splitstream Implementation

At the time we ran our experiments, Macedon's Splitstream implementation did not implement the recovery mechanism. Therefore the behavior of Splitstream following the failure is not due to the limitations of the protocol.

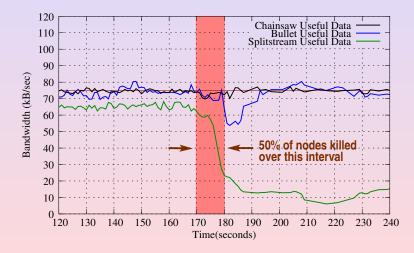

Scalability No Packet Loss Startup Delay Comparison to Bullet and Splitstream DVD Streaming Over Planetlab

Bandwidth

Scalability No Packet Loss Startup Delay Comparison to Bullet and Splitstream DVD Streaming Over Planetlab

<ロ> <部> <部> <=> <=> <=>

Packet Loss

Splitstream	Bullet	Chainsaw
 All nodes suffered packet loss 	 All nodes suffered packet loss 	 98% of the nodes had zero packet loss
 Average packet loss rate: 14% 	 Packet loss rate: 0.88% - 3.64% 	 Two nodes suffered <0.05% packet loss
 (ignore behavior after nodes fail) 	 Loss rate unaffected by node failure 	 One overloaded node suffered 60% loss

Scalability No Packet Loss Startup Delay Comparison to Bullet and Splitstream DVD Streaming Over Planetlab

Duplicate Data

Splitstream

- Tree-based design eliminates duplicate data
- No duplicate packets observed

Bullet

- RanSub algorithm makes duplication likely
- Nodes received 5-10% duplicate data on average

Chainsaw

(日) (同) (三) (三)

- Spurious timeouts may cause duplicate requests
- Observed duplicate data rate <1%

Scalability No Packet Loss Startup Delay Comparison to Bullet and Splitstream DVD Streaming Over Planetlab

DVD Streaming Over Planetlab

Experimental Setup

- Native C implementation
- 8kB packet size
- 4 Mbit stream (Comparable to DVD rate)

Results

- 230 nodes received stream with zero loss
- 920 Mbit aggregate bandwidth!
- Protocol overhead (including TCP/IP headers, etc.): 10%

Future Work

Future Work

- Churn
 - We have not experimented with dynamic joins and leaves
 - Unstructured architecture: expected to work even with a fraction of neighbors are working at a given time

Future Work

Future Work

- Churn
 - We have not experimented with dynamic joins and leaves
 - Unstructured architecture: expected to work even with a fraction of neighbors are working at a given time
- Non-cooperative Environments
 - So far we assume nodes upload willingly
 - When total capacity is scarce, we wish to penalize those that don't upload first

< ロ > < 同 > < 三 > < 三 >

Future Work

Future Work

- Churn
 - We have not experimented with dynamic joins and leaves
 - Unstructured architecture: expected to work even with a fraction of neighbors are working at a given time
- Non-cooperative Environments
 - So far we assume nodes upload willingly
 - When total capacity is scarce, we wish to penalize those that don't upload first
- Piece-picking Strategy
 - Being smarter than Random may yield better performance
 - Better ways of taking delay and rarity into account

・ロト ・同ト ・ヨト ・ヨト

Conclusion

We have shown that:

- Overlay multicast over an unstructured network is feasible
- The architecture can scale to a large number of nodes
- Packet loss can be virtually eliminated
- The system is resilient to catastrophic node failure
- Real-world tests corroborate simulation results

Appendix Another Experiment!
