Architecture report out

Andy, A.J., Keshav, Viktor, Erica, Ben

Nomenclature for the networked home

- * <u>Devices</u> are hardware on the <u>network</u> that offer <u>services</u>.
- * <u>Services</u> can be combined to perform <u>tasks</u>.

* (the cloud can be seen as a device)

Team's end game

* Build the home networking stack that enables sets of scenarios.

- An architecture that allows someone of average intelligence to enable supported tasks without assistance.
- * Include support for diagnosis.

Architectural definitions

* Definitions:

- * A device has a name and a location
- * A device has ports and characteristics
- * The network moves data between names
- * Ports can either be consumers or producers

Design principles

- * Diversity* Innovation
- * Extensibility
- * Profitability?
- * Scalability
- * Diagnosability
- * Usability (human in the loop)

Architectural components

- * Names have to be assigned to devices [HNS]
- * Names and ports have to be discovered [HDS]
- * Ports have to expose services
- Secure pairing of devices (authentication)
- Task enumeration by controller (tasks are event driven and/or timer driven)
- * Task selection by user
- * Task provisioning by controller

Controller (management plane)

- * List of devices and services
- * Implement user supplied policy
- Optimization engine (to combine tasks) to provision tasks
- * Is Internet-accessible
- * Manages alerts and triggers

When Things Go Wrong

- * Each service must respond to synthetic probes
- * Each service checks for valid input data type
- Check task specifics end to end
- Use pluggable modules for each of the devices to get certification of function
- Core dump of the components involved in the task

Development Ecosystem

* Those who develop devices

* Those who develop controllers

 Home Networking Operators/Managers (for outsourcing)

* Task Creators

Does it work?

- * Ben's birthday party. He wants his camera to display photos on the TV as he takes them.
- Andy wants to hear his favorite playlist of songs stored in the server in the shower.
- * Erica wants to find out where the bugs are coming into the home.
- Ben wants to know when the furnace needs a filter replacement.
- A.J. wants her HVAC to start heating her home 30 minutes before she leaves from work.
