Different ways to deal with problems

Do it yourself. We can help

Bring it to us. We will fix it.

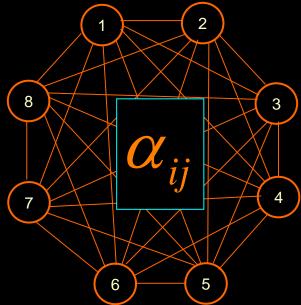

How can we help?

- Interpretation
 - can user understand how the system works?
- Intuition
 - how to incorporate user input
- User engagement
 - how should the system engage the user?

Interpretation

 Give the user feedback on how different parts of the system interact to produce final outcome

$$P(S_t^i \mid S_{t-1}^1, ..., S_{t-1}^N) = \sum_j \alpha_{ij} P(S_t^i \mid S_{t-1}^j)$$

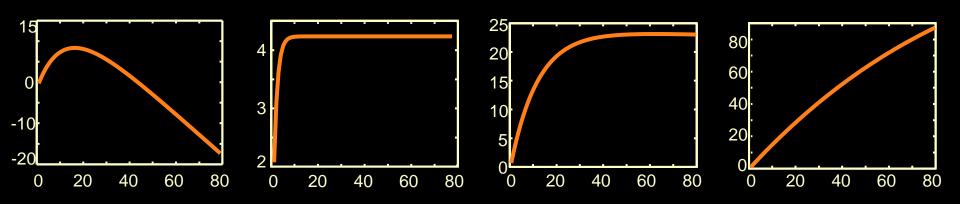

Intuition

 Design models that can incorporate human intuitions and expectations

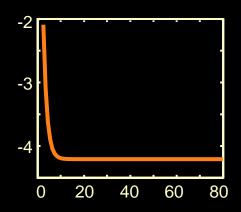

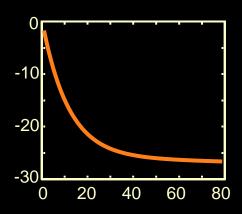

Many weight shapes

Negative multiplicative weight

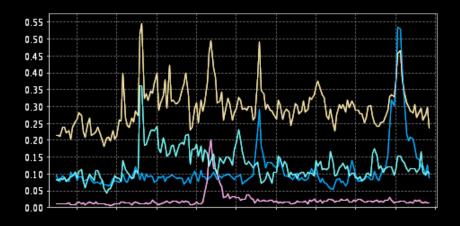

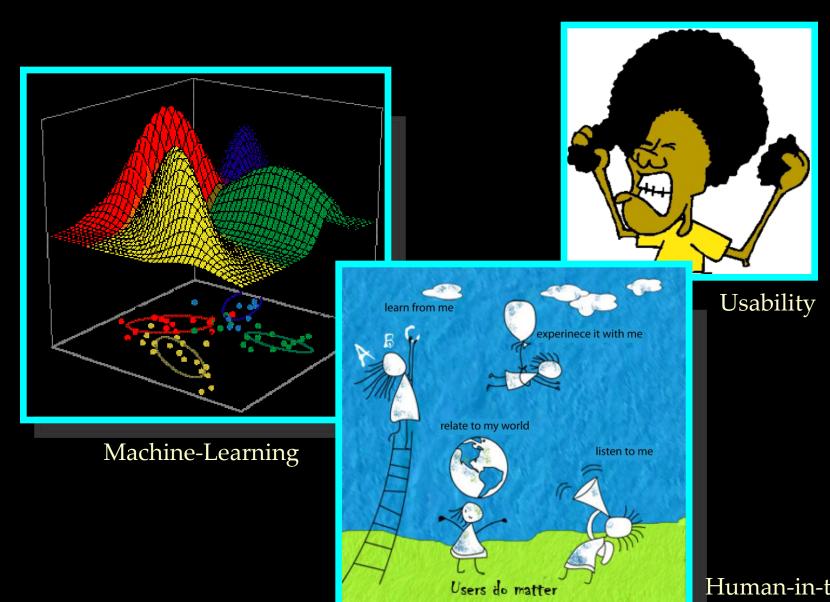

User engagement

Conveying ambiguity

Trade-off between accuracy and user cost

$$J = \lambda \otimes U + (1 - \lambda) \cdot C$$

Human-in-the-loop
